Popular Mechanics inspires, instructs and influences readers to help them master the modern world. Whether it's practical DIY home-improvement tips, gadgets and digital technology, information on the newest cars or the latest breakthroughs in science -- PM is the ultimate guide to our high-tech lifestyle.

As U.S. and Canadian automakers and dealers face bankruptcy and Toyota battles unprecedented quality-control problems, Lemon-Aid guides steer the confused and anxious buyer through the economic meltdown unlike any other car-and-truck books on the market. Phil Edmonston, Canada's automotive "Dr. Phil" for more than 40 years, pulls no punches. In this all-new guide he says: Chrysler's days are numbered with the dubious help of Fiat. Electric cars and ethanol power are PR gimmicks. Diesel and natural gas are the future. Be wary of "zombie" vehicles: Jaguar, Land Rover, Saab, and Volvo. Mercedes-Benz -- rich cars, poor quality. There's only one Saturn you should buy. Toyota -- enough apologies: "when you mess up, 'fess up."

All Hyundai Santa Fe models, 01 thru 06.

Lemon-Aid New and Used Cars and Trucks 1990-2015 steers the confused and anxious buyer through the purchase of new and used vehicles unlike any other car-and-truck book on the market. "Dr. Phil," Canada's best-known automotive expert for more than 42 years, pulls no punches.

East Asia is a powerhouse of automobile production. Yet, across the region, national automobile industries have had strikingly different patterns of development. Despite starting from equally low levels of performance and initially similar strategies, countries have experienced vastly different results. From Thailand's success as an assembly hub for foreign automakers and China's unexpected achievements in building its own car industry, to South Korea's impressive development of an integrated industry, to the Philippines' persistent weakness, these divergent paths offer a fascinating window into the determinants of economic growth. The Political Economy of Automotive Industrialization in East Asia provides a political explanation for why development strategies and performance have been so uneven within one of the world's most important regions. Utilizing interviews and original-language research from multiple nations, this book explains that factors such as market size and neoclassical economic policies alone cannot explain these patterns of development. Richard F. Doner, Gregory W. Noble, and John Ravenhill instead highlight the significance of two sets of factors: countries' very different capabilities for implementing policies and the political forces that help to explain the emergence of effective institutions. Through cross-national analyses of China, Taiwan, South Korea, Indonesia, Malaysia, the Philippines, and Thailand, the book sets up a clear structure for understanding industrial development and how it enables or constrains the capabilities of domestic firms. Brief comparisons with Brazil, Mexico, and other developing countries confirm the utility of the analytic framework and demonstrate how it is superior both to accounts in mainstream economics and much of political science, which fail to give sufficient emphasis to the role of public and public-private institutions, or provide an explanation of the political bases of those institutions. In a world where auto assemblers and suppliers are facing new challenges in an ever-evolving industry--such as the transition to electric and autonomous vehicles--this book offers a crucial perspective on the centrality of institutional capacities and political economy. By tracing the divergent trajectories of seven nations, The Political Economy of Automotive Industrialization in East Asia offers lessons beyond the automobile industry that illustrate the broader importance of institutions to economic growth.

The automobile industry is evolving rapidly on a worldwide basis. Manufacturers are merging, component design and manufacture are now frequently outsourced instead of being created in-house, brands are changing and the giant auto makers are expanding deeper into providing financial services to car buyers. The skyrocketing price of gas spurs developments in hybrid technology and clean diesel, as manufacturers look for ways to improve fuel efficiency. Meanwhile, all of the biggest, most successful firms have become totally global in nature. Plunkett's Automobile Industry Almanac will be your complete guide to this immense, fascinating industry. On the car dealership side, giant, nationwide holding companies have acquired the best dealers in major markets. Even the used car business is being taken over by national chains. E-commerce is having profound effects on the car industry.

Consumers use the Internet to become better informed before making a purchase. Online sites like Autobytel steer millions of car buyers toward specific dealers while the same sites deliver competing bids for cars, insurance and financing in a manner that lowers costs and improves satisfaction among consumers. Meanwhile, auto makers are using the latest in e-commerce methods to manage their supply chains and replenish their inventories. This exciting new book (which includes a database on CD-ROM) is a complete reference tool for everything you need to know about the car, truck and specialty vehicles business, including:
