For upper level undergraduate and MBA Management Accounting courses. An approach to management accounting from the perspective of a business manager. Atkinson presents state-of-the-art thinking on all of the major topics in management accounting including activity-based management, the Balanced Scorecard, target costing, and management control system design. This title is a Pearson Global Edition. The Editorial team at Pearson has worked closely with educators around the world to include content which is especially relevant to students outside the United States.

This updated and revised fourth edition of Accounting for Managers builds on the international success of the previous editions in explaining how accounting is used by non-financial managers. Emphasizing the interpretation rather than the construction of accounting information, Accounting for Managers encourages a critical, rather than an unthinking acceptance of accounting techniques. Whilst immensely valuable for planning, decision-making and control, users of accounting information need to recognize the assumptions behind, and the limitations of particular accounting techniques. As in the previous editions, Accounting for Managers links theory with practical examples and case studies drawn from real business situations across a wide range of manufacturing, retail and service industries.

With its easy-to-understand presentation and hands-on learning approach, MANAGERIAL ACCOUNTING: A FOCUS ON ETHICAL DECISION MAKING gives you everything you need to know as you face the challenges and rewards of the business world. The authors use realistic companies and real issues to clearly illustrate concepts without getting into complex, extraneous data that can be confusing. An innovative and easy-to-learn four-step problem-solving methodology gives you a proven decision-making framework that will help you define the problem, identify the objectives, analyze available options, and select the best solution. Accounting For Managers Interpreting Accounting Information for Decision-Making Wiley

The second edition of Dr. Demski's book reflects his experiences teaching undergraduates, masters and doctoral students. He emphasizes economic fundamentals as the guiding foundation coupled with an artful application of those fundamentals. This applies to product costing, decision making and evaluation art. Dr. Demski has also removed a great deal of traditional minutiae, in order to keep this theme in constant focus. This thematic approach, in his experience, works in dramatic fashion, and stands in sharp contrast to more traditional presentations of this material. The book is not only for use as a textbook but also as a reference book.

Seminar paper from the year 2015 in the subject Business economics - Banking, Stock Exchanges, Insurance, Accounting, grade: A, Atlantic International University (School of Business and Economics), course: Ph.D Accounting, language: English, abstract: The objective of this paper is to justify the existence of the accounting function as a significant and integral requirement of each organization and institution as well as its purpose in the current society we live in today. This entails the analysis of the users of accounting information, the various branches of accounting and the relevance of this information to various stakeholders in the society that surround and support organizations and institutions. Accounting, in itself is a fundamental part of the information systems of organizations today. This is because there are various parties in the society that need this information apart from the managers and owners of the organizations and institutions. Furthermore, accounting is now regarded as a service function of organizations and the society in general. This is because as an informative function of organizations, it enables various users to make relevant and valid decisions of an economic and financial viewpoint.

?This book contains a collection of research papers on accounting information systems including their strategic role in decision processes, within and between companies. An accounting system is a complex system composed of a mix of strictly interrelated elements such as data, information, human resources, IT tool, accounting models and procedures. Accounting information systems are often considered the instrument by default for accounting automation. This book aims to sketch a clear picture of the current state of AIS research, including design, acceptance and reliance, value-added decision making, interorganizational links, and process improvements. The contributions in this volume emphasize that AIS has grown into a powerful strategic tool. The book provides evidence for this observation by examining a wide range of current issues ranging from theory development in AIS to practical applications of accounting information systems. In particular it focuses on themes of growing interest in the realm of XBRL and Financial Reporting, Management Information Systems, IT/IS Audit and IT/IS Compliance. The book will be of interest to financial and managerial accountants and IT/IS practitioners, including information systems managers and consultants.

Many corporate managers struggle to see the relevance of accounting in their everyday responsibilities. Weygandt shows them how managerial accounting information fits in the larger context of business so they are better able to understand the important concepts. The new Do It! feature reinforces the basics by providing quick-hitting examples of brief exercises. The chapters also incorporate the All About You (AAY) feature as well as the Accounting Across the Organization (AAO) boxes that highlight the impact of accounting concepts. With these features, readers will have numerous opportunities to think about what they have just read and then apply that knowledge to sample problems.
