A Groundbreaking Guide to the HPV Vaccine and the Science, Safety, and Business Behind It Cancer strikes fear in people's hearts around globe. So the appearance of a vaccine to prevent cancer—as we are assured the human papillomavirus (HPV) vaccine will—seemed like a game-changer. Since 2006, over eighty countries have approved the vaccine, with glowing endorsements from the world's foremost medical authorities. Bringing in over \$2.5 billion in annual sales, the HPV vaccine is a pharmaceutical juggernaut. Yet scandal now engulfs it worldwide. The HPV Vaccine on Trial is a shocking tale, chronicling the global efforts to sell and compel this alleged miracle. The book opens with the vaccine's invention, winds through its regulatory labyrinths, details the crushing denial and dismissal of reported harms and deaths, and uncovers the enormous profits pharma and inventors have reaped. Authors Holland, Mack Rosenberg, and Iorio drill down into the clinical trial data, government approvals, advertising, and personal accounts of egregious injuries that have followed in countries as far-flung as Japan, Australia, Colombia, India, Ireland, the U.K. and Denmark. The authors have written an unprecedented exposé about this vaunted vaccine. Written in plain language, the book is for everyone concerned – parents, patients, doctors, nurses, scientists, healthcare organizations, government officials, and schools. Ultimately, this book is not just about the HPV vaccine, but about how industry, government, and medical authorities may be putting the world's children in harm's way.

Cervical cancer was once the leading cause of death for women in the United States according to Centers for Disease Control and Prevention (CDC, 2006). During the past four decades, incidence and mortality have declined significantly, primarily because of the utilization of the Papanicolaou (Pap) test to detect cervical abnormalities. Evidence-based research led to clinical practice guidelines established by the ACS and ACOG in 2003 for screening of cervical cancer. This study utilized a retrospective chart review to describe adherence by nurse practitioners and physicians to cervical cancer screening guidelines as established in 2003 by the ACS and ACOG. Two hundred patient charts stratified by practitioner type were audited using convenience sampling. One hundred seventy three (86.5%; 95% CI = 80.3% to 90.7%) documented education related to prevention of HPV infection, 131 (65.5%) documented education related to safe sex practices, and 154 (76.7%) documented recommendation for an annual Pap smear. There were no significant differences between the two types of providers in their documentation. The results indicated the need for improvement in documentation.
