An ambitious, comprehensive reimagining of 21st century higher education *Improving Quality in American Higher Education* outlines the fundamental concepts and competencies society demands from today's college graduates, and provides a vision of the future for students, faculty, and administrators. Based on a national, multidisciplinary effort to define and measure learning outcomes—the Measuring College Learning project—this book identifies 'essential concepts and competencies' for six disciplines. These essential concepts and competencies represent efforts towards articulating a consensus among faculty in biology, business, communication, economics, history, and sociology—disciplines that account for nearly 40 percent of undergraduate majors in the United States. Contributions from thought leaders in higher education, including Ira Katznelson, George Kuh, and Carol Geary Schneider, offer expert perspectives and persuasive arguments for the need for greater clarity, intentionality, and quality in U.S. higher education. College faculty are our best resource for improving the

quality of undergraduate education. This book offers a path forward based on faculty perspectives nationwide: Clarify program structure and aims Articulate high-quality learning goals Rigorously measure student progress Prioritize higher order competencies and disciplinarily grounded conceptual understandings A culmination of over two years of efforts by faculty and association leaders from six disciplines, this book distills the national conversation into a delineated set of fundamental ideas and practices, and advocates for the development and use of rigorous assessment tools that are valued by faculty, students, and society. Improving Quality in American Higher Education brings faculty voices to the fore of the conversation and offers an insightful look at the state of higher education, and a realistic strategy for better serving our students.

Wat hebben de verdwijning van paardenmest en de introductie van kabeltelevisie met elkaar te maken? Waarom is het beter om dronken achter het stuur te stappen dan te gaan lopen? In vervolg op de internationale bestseller Freakonomics, werpt SuperFreakonomics opnieuw onverwachte, verrassende en prikkelende vragen op. Steven Levitt en Stephen Dubner gaan op zoek naar de antwoorden en laten zien dat ons gedrag gestuurd wordt door economische motieven. Of het nu gaat om prostituees, zelfmoordterroristen, klimaatdeskundigen of artsen: zij worden uiteindelijk allemaal gedreven door economische prikkels. SuperFreakonomics gaat over dingen waarvan je altijd dacht dat je ze wist maar die niet waar bleken te zijn, of dingen waarvan je nooit wist dat je ze wilde weten. Dit boek onderzoekt kortom de verborgen kant van de wereld en daagt ons uit die opnieuw te definiëren.

In the Great Recession of 2007-2010, Americans watched their retirement savings erode and the value of their homes decline while the unemployment rate increased and GDP sank. New demands emerged for unprecedented government intervention into the economy. While these changes have a dramatic impact on society at large, they also have serious implications for the content and teaching of economics. Teaching Economics in a Time of Unprecedented Change is a one-stop collection that helps pre- and in-service social studies teachers to foster an understanding of classic content as well as recent economic developments. Part I offers clear

and teachable overviews of the nature of today's complex economic crisis and the corollary changes in teaching economics that flow from revising and updating long-held economic assumptions. Part II provides both detailed best practices for teaching economics in the social studies classroom and frameworks for teaching economics within different contexts including personal finance, entrepreneurship, and history. Part III concludes with effective strategies for teaching at the elementary and secondary school levels based on current research on economic education. From advice on what every economics teacher should know, to tips for best education practices, to investigations into what research tells us about teaching economics, this collection provides a wealth of contextual background and teaching ideas for today's economics and social studies educators. In this landmark volume, Greg J. Duncan and Richard J. Murnane lay out a meticulously researched case showing how—in a time of spiraling inequality—strategically targeted interventions and supports can help schools significantly improve the life chances of low-income children. The authors offer a brilliant synthesis of recent research on inequality and its effects on families, children, and schools. They describe the interplay of social and economic factors that has made it increasingly hard for schools to counteract the effects of inequality and that has

created a widening wedge between low- and high-income students. Restoring Opportunity provides detailed portraits of proven initiatives that are transforming the lives of low-income children from prekindergarten through high school. All of these programs are research-tested and have demonstrated sustained effectiveness over time and at significant scale. Together, they offer a powerful vision of what good instruction in effective schools can look like. The authors conclude by outlining the elements of a new agenda for education reform. Restoring Opportunity is a crowning contribution from these two leading economists in the field of education and a passionate call to action on behalf of the young people on whom our nation's future depends. Economics is taught in some form in the secondary schools of nations throughout the world. The subject is rarely taught in elementary schools, and while economics courses are offered in universities, the majority of students end their formal education with secondary school. Thus, the best opportunity for the economic education of the youth of a nation occurs in secondary schools. This book examines economic education at this critical level of the educational system. The teaching of economics in secondary schools varies across countries. These differences occur because of history, the structure of education, and other national factors. At the same time, there are common elements in the economic education of many countries, especially in content coverage. This contrast between the common features and the uniqueness of economic education

in secondary schools of major industrial nations exemplifies the international perspective presented in this book. The international perspective is developed in the six sections of the volume. The first section discusses why nations should include economics in school curricula, and presents a framework for teaching economics that should have global appeal. Dissension and consensus on economic issues among North American and European economists are examined in the second section. The third section surveys the U.S. research literature on precollege economic education and assesses the current state of economics instruction in U.S. schools. The economics curricula and educational practices in seven other nations -- the U.K., Canada, Japan, Germany, Austria, Korea, and Australia -- are described in the fourth and fifth sections. The fifth section also presents international comparisons of economic understanding based on national testing in six of those nations. The sixth and final section explores the role of economic education in centrally planned economies, and its effects on the transition to a market economy, using Russia, Bulgaria, and China as case studies. This Handbook outlines the current state of research in social studies education – a complex, dynamic, challenging field with competing perspectives about appropriate goals, and on-going conflict over the content of the curriculum. Equally important, it encourages new research in order to advance the field and foster civic competence; long maintained by advocates for the social studies as a fundamental goal. In considering how to organize the Handbook, the editors searched out definitions of social studies, statements of purpose, and themes that linked (or divided) theory, research, and practices and established criteria for topics to include. Each chapter meets one or more of these criteria: research activity since the last Handbook that warrants a new analysis, topics representing a major emphasis in the NCSS standards, and topics reflecting an emerging or reemerging field within the social studies. The volume is organized around seven themes: Change and Continuity in Social Studies Civic Competence in Pluralist Democracies Social Justice and the Social Studies Assessment and Accountability Teaching and Learning in the Disciplines Information Ecologies: Technology in the Social Studies Teacher Preparation and Development
