Instrument Engineers' Handbook, Volume Two Process Control and Optimization CRC Press

The latest update to Bela Liptak's acclaimed "bible" of instrument engineering is now available. Retaining the format that made the previous editions bestsellers in their own right, the fourth edition of Process Control and Optimization continues the tradition of providing quick and easy access to highly practical information. The authors are practicing engineers, not theoretical people from academia, and their from-the-trenches advice has been repeatedly tested in real-life applications. Expanded coverage includes descriptions of overseas manufacturer's products and concepts, model-based optimization in control theory, new major inventions and innovations in control valves, and a full chapter devoted to safety. With more than 2000 graphs, figures, and tables, this all-inclusive encyclopedic volume replaces an entire library with one authoritative reference. The fourth edition brings the content of the previous editions completely up to date, incorporates the developments of the last decade, and broadens the horizons of the work from an American to a global perspective.

Béla G. Lipták speaks on Post-Oil Energy Technology on the AT&T Tech Channel.

Over the past 12 years, ISSC has been a major forum for engineers and young researchers in Ireland on communications, control and DSP. The conference has established itself as one of the premier conferences in Ireland, addressing all aspects of signals and systems including design, implementation, algorithms, modelling and performance. This conference continued this tradition under the auspices of the IEE and for the first time the ISSC conference proceedings are published by the IEE and indexed by INSPEC.

Includes entries for maps and atlases.

New Scientist magazine was launched in 1956 "for all those men and women who are interested in scientific discovery, and in its industrial, commercial and social consequences". The brand's mission is no different today - for its consumers, New Scientist reports, explores and interprets the results of human endeavour set in the context of society and culture.
