The 5th International Conference on Field and Service Robotics (FSR05) was held in Port Douglas, Australia, on 29th - 31st July 2005, and brought together the worlds' leading experts in field and service automation. The goal of the conference was to report and encourage the latest research and practical results towards the use of field and service robotics in the community with particular focus on proven technology. The conference provided a forum for researchers, professionals and robot manufacturers to exchange up-to-date technical knowledge and experience. Field robots are robots which operate in outdoor, complex, and dynamic environments. Service robots are those that work closely with humans, with particular applications involving indoor and structured environments. There are a wide range of topics presented in this issue on field and service robots including: Agricultural and Forestry Robotics, Mining and Exploration Robots, Robots for Construction, Security &

Defence Robots, Cleaning Robots, Autonomous Underwater Vehicles and Autonomous Flying Robots. This meeting was the fifth in the series and brings FSR back to Australia where it was first held. FSR has been held every 2 years, starting with Canberra 1997, followed by Pittsburgh 1999, Helsinki 2001 and Lake Yamanaka 2003.

This textbook sets the standard for university-level instruction of mining engineering principles. With a thoughtful balance of theory and application, it gives students a practical working knowledge of the various concepts presented. Its utility extends beyond the classroom as a valuable field reference for practicing engineers and those preparing for the Professional Engineers Exam in Mining Engineering. This practical guidebook covers virtually all aspects of successful mine design and operations. It is an excellent reference for engineering students who are studying mine design or who require guidance in assembling a mine-design project, and industry professionals who require a comprehensive mine-design reference book. Topics include everything from mine preplanning to ventilation to pumping, power, and hauling systems. The text presents widely accepted principles that promote safe, efficient, and profitable mining operations. The book is an excellent text and self-study guide. Each chapter is organized to demonstrate how to apply various equations to solve day-to-day operational challenges. In addition, each chapter offers a series of practice problems with solutions.

The world economy today is at an historical inflection point. The neoclassical (industrial) model of economics is self-destructing while a new life-mimicking model, based on radically different assumptions, is emerging. Although rarely acknowledged in economic journals, Nordic countries, which pioneered the life-mimicking model, have become world leaders in prosperity and productivity while those operating on the older neoclassical/industrial model are trapped in downward spirals. By approaching economies as sub-systems of life rather than super-systems that transcend life, we gain transformative insights. Such thinking led to the first circular economy experiments in Kalundborg (Denmark) during the 1970s, then quickly spread to the rest of the Nordic world. By placing a higher value on living assets (people and Nature) than on non-living capital assets, this approach generates harmony rather than exploitation and conflict. Because Nordic people feel

vested in the system and responsible for its success, they are extraordinarily innovative and productive. That is why Nordic companies are regularly rated among the world's most sustainable and profitable in their fields – even though their region holds less than half of one percent of the world's population. Written in an accessible way for non-economists, the book is ideal for readers interested in the benefits of biomimicry and methods of guiding democratic countries along a proven path of self-renewal. Economies That Mimic Life will also provide useful background for corporate leaders in scenario planning and strategic thinking. Knowing which way the political-economic wind is blowing will become increasingly important to corporate survival.
