This open access book explores ways to leverage information technology and machine learning to combat disease and promote health, especially in resource-constrained settings. It focuses on digital disease surveillance through the application of machine learning to non-

traditional data sources. Developing countries are uniquely prone to large-scale emerging infectious disease outbreaks due to disruption of ecosystems, civil unrest, and poor healthcare infrastructure – and without comprehensive surveillance, delays in outbreak identification, resource deployment, and case management can be catastrophic. In combination with context-informed analytics, students will learn how non-traditional digital disease data sources – including news media, social media, Google Trends, and Google Street View – can fill critical knowledge gaps and help inform on-the-ground decision-making when formal surveillance systems are insufficient.

The Hidden Science of Lost Civilisations is a guided tour through the most incredible scientific mysteries in the modern world, and a rediscovery of an ancient system of physics and spirituality that has since crumbled almost entirely into ruin. David Wilcock's extensive knowledge of contemporary science has led him to rewrite the Mayan myth; 2012 will not be the end of the world, but will be the start of mankind's golden period. A hidden intelligence, a living energy field that the universe is built from, which David Wilcock calls the Source Field, guides mankind's destiny. David Wilcock has studied this intelligence for over thirty years and has come to understand that the Source Field is the key to unlocking the mysteries mankind have always struggled to answer: who are we, how did we get here and where are we going? Drawing upon alternative science, as well as cutting-edge quantum physics and consciousness research, Wilcock connects the scientific with lost traditions of ancient wisdom to predict what lies in mankind's future.
