After two volumes mainly introductory, Dr Needham now embarks upon his systematic study of the development of the natural sciences in China. The Sciences of the Earth follow: geography and cartography, geology, seismology and mineralogy. Dr Needham distinguishes parallel traditions of scientific cartography and religious cosmography in East and West, discussing orbocentric wheel-maps, the origins of the rectangular grid system, sailing charts and relief maps, Chinese survey methods, and the impact of Renaissance cartography on the East. Finally-and here Dr Needham's work has no Western predecessors-there are full accounts of the Chinese contribution to geology and mineralogy.

Readers will engage in wide range of textual approaches and interpretive traditions through this broadly informed, accessibly written text. Dr. Christopher Hodgkins has taught Literary Study of the Bible for 25 years, over which time he has field-tested the many lenses—of genre, image, language, characterization, plot, and craft—used throughout this book. Tracing the sources, composition, and influences of the Biblical text, this book places the Bible in a tradition of ancient near eastern, Hebrew, and Hellenistic literary art, giving new depth to the way we understand the familiar stories of scripture. Unlike other literary introductions to the Bible, this book uniquely combines these elements: Approaches the Bible as a richly collaborative and coherent work of literary art, exploring how earlier books influence the creation and interpretation of later ones Provides illuminating commentary supplemented by explanatory textboxes, maps, illustrations, and study questions to enhance interest and expand learning Introduces poetic and narrative devices like doubling, juxtaposition, and irony within the context of scriptural art and editorial design Gives extensive attention to each biblical book, resulting in the most comprehensive introduction to literary Bible study to date Presents these materials through an accessible and lively text permeated with references to both high and popular culture Literary Study of the Bible will be a welcome addition to personal, school, college, and congregational libraries, as well as an excellent text for students of the Bible in both secular and faith-based settings.

Our Bible Study is a condensed version of every verse, chapter and book of the Bible. The purpose was to take out the repetition so we could better understand what the message we were to receive meant. So often the words just 'spoke to us' and we realized we needed to share our interpretation. Through experimenting with other studies we found that Our Bible Study simplified the understanding of God's Word.

nd This book stems from the 2 Parkinson's Disease Symposium on "Neurotoxic Factors in Parkinsons disease and related disorders", held on August 6-7, 1999 at the University ofUlm Medical School in Ulm at the Danube, Germany. The symposium wasalso asatellite ofthejointmeetingofthe InternationalSocietyfor Neurochemistry (ISN) and the European Society for Neurochemistry (ESN) that followed immediately afterwards in Berlin. The specific topic, neurotoxic factors in Parkinson's disease (PD), was chosen in light of accumulating neurobiological and epidemiological evidence indicating that the causes of this second most common neurodegenerative disorder, and possibly of related conditions such as multiple systems atrophy, in some manner involve environ mental (xenobiotic) and even endogenous toxic agents. This volume brings together much of that neurobiological evidence; and in epidemiology, several recent major studies ofPD - for example, a study of20,000 twins published in the Journal of the American Medical Association in 1999 - conclude that environmental and life style than genetics, appear to be critical in the idiopathic disease. However, factors, rather the precise roles of neurotoxic factors in the pathogenesis of PD and related basal ganglia disorders remain uncertain, despite the cascade of research resulting from the discovery of the prototype MPTP in the early 1980's, and frankly, we have been surprised by the paucity of concentrated attention on specific environmental agents other than MPTP.

Proceedings of the XXth International Astronautical Congress compiles selected papers presented at the 20th International Astronautical Congress held in Mar del Plata, Argentina in 1969. This book is divided into five main topics--spacecraft engineering, astrodynamics, astronics, bioastronautics, and problems of education. In these topics, this compilation specifically discusses the equatorial vibrations of a long flexible boom on a spin-stabilized satellite of non-zero radius; heat transfer to linear bodies in two-dimensional hypersonic low density; and limits of accuracy of general perturbations for satellites moving under constant forces. The rapid optimization of multiple-burn rocket flights; data transmission for planetary studies; and comparison of theoretical and experimental attitude data for the DODGE spacecraft are also elaborated. This text also covers the Apollo life-support and protective systems; bioastronautical aspects of Apollo biomedical operations; and development and applications of hot water rockets. This publication is recommended for astrophysicists and scientists of other disciplines related to astronomy.

"This is a thoughtful and scholarly addition to the unfortunately scarce literature on domestic violence and oppression in all its forms."--Jacquelyn C. Campbell, Anna D. Wolf Chair, Johns Hopkins University School of Nursing "An exciting and powerful collection that eloquently critiques some of the current thinking in domestic violence and raises key concerns for advocates and scholars working in the area."--Sujata Warrior, president, board of directors, Manavi: An organization for South Asian women "Sokoloff has assembled an impressive array of authors who challenge us to 'think outside of our contemporary domestic violence box.'"--Angela M. Moore Parmley, chief, violence and victimization research division, National Institute of Justice This groundbreaking anthology reorients the field of domestic violence research by bringing long-overdue attention to the structural forms of oppression in communities marginalized by race, ethnicity, religion, sexuality, or social class. Reprints of the most influential recent work in the field as well as more than a dozen newly commissioned essays explore theoretical issues, current research, service provision, and activism among Latinos, African Americans, Asian Americans, Jewish Americans, and lesbians. The volume rejects simplistic analyses of the role of culture in domestic violence by elucidating the support systems available to battered women within different cultures, while at the same time addressing the distinct problems generated by that culture. Together, the essays pose a compelling challenge to stereotypical images of battered women that are racist, homophobic, and xenophobic. The most up-to-date and comprehensive picture of domestic violence available, this anthology is an essential text for courses in sociology, criminology, social work, and women's studies. Beyond the classroom, it provides critical information and resources for professionals working in domestic violence services, advocacy, social work, and law enforcement.
