Intensive Care Medicine (or Critical Care, the terms are used interchangeably) is an evolving specialty both within the UK and worldwide. It has recently been established as a UK speciality in its own right, and is at the centre of the modern acute hospital, responsible for managing the sickest and most complex patients. There is a growing cadre of critical care specialists in the UK, underpinned by a large number of doctors in training within the specialty. Management of patients with severe traumatic injury is provided by intensive care specialists, often in conjunction with a range of other professionals such as surgeons and interventional radiologists. The management of these patients, who have competing complex injuries can be challenging. Traumatic injury is recognised as a significant cause of preventable mortality and such patients are now clustered within Major Trauma Centres across the UK. The Defence Medical Services of the UK have spent the last 10 years managing patients with very severe traumatic injuries, first in Iraq and most recently in Afghanistan.

The lessons learnt from this experience has filtered through to the NHS, resulting in many changes to established practice. Whilst several books have been published based on this experience, none have focused on the intensive care management of such patients, which represents a vital link in the chain of survival from injury to recovery.

This volume compiles the perspectives of a multi-author team examining the entire spectrum of burn reconstruction and long-term treatment. Individual chapters cover basic aspects of wound healing and scarring, and those of plastic surgery relating to tissue rearrangement and the use of flaps, as well as the long-term use of skin and skin substitutes.

Furthermore, topics such as rehabilitation and scar management are addressed in detail. This part provides detailed reconstruction guidelines divided by anatomic region (e.g. face, hands,...), as well as aspects of future trends and prospects in burn reconstruction, among which are e.g. allotransplantation and bionics.

This book includes chapters on pregnancy, parenting, childhood, adolescence, adulthood, aging and mental health, examining rurality, population and health demographics, and the different practice opportunities available in rural settings.

topics, and clinical developments in the field, to help you provide exceptional care in today's fast-paced health care environment. Completely revised and updated content explores patient care in various clinical settings and focuses on key topics such as prioritization, clinical decision-making, patient safety, and NCLEX® exam preparation. A variety of helpful boxes and tables make it easy to find essential information and the accessible writing style makes even complex concepts easy to grasp! Best of all — a complete collection of interactive learning and study tools help you learn more effectively and offer valuable, real-world preparation for clinical practice. This textbook on burn care is focused specifically on the needs of a surgeon. It provides a “how to do” text that presents the practical strategies for initial resuscitation, skin grafting, burn-specific critical care and ultimately guide the surgeon for the best outcomes for the burn surgeon. It provides the reader with basic pathophysiology but avoids a detailed review of the molecular science of burns. Guidelines for basic care with the chapters covering the timeline used for each patient spanning from initial resuscitation (ABCs) to managing their re-socialization are provided. The text covers the key components to the initial management of the burn patient including airway, breathing and circulation. The reader is introduced to the metabolic changes of a major burn and how nutrition and pharmacologic

manipulation affects these systemic effects of a burn injury. The management of burn sepsis as well as the basic concepts of wound healing of the different depths and severity of burns are covered. Another chapter covers the basic techniques of skin grafting, rehabilitation and reconstruction with a focus to optimize the cosmetic and functional outcome of the burn. Special chapters cover management of outpatient burns and pediatric injuries. Special burns – electrical, chemical, cold injuries and finally the treatment of other diseases that lead to massive skin loss are covered. Special considerations for pain, scar management, psychosocial recovery, intentional burns, burn prevention and disaster preparation complete the text. *Burn Care for General Surgeons and General Practitioners* provides a reference for general and plastic surgeons who are planning a career in burns. The textbook will also be a straightforward resource for the general or plastic surgeon who takes care of burns as part of their practice.

Palliative care has become increasingly important across the spectrum of healthcare, and with it, the need for education and training of a broad range of medical practitioners not previously associated with this field of care. Part of the Integrating Palliative Care series, this volume on surgical palliative care guides readers through the core palliative skills and knowledge needed to deliver high value care for patients with life-limiting, critical, and terminal illness under surgical care. Chapters explore the historical, philosophical, and spiritual principles of surgical palliative care, and follow the progression of the seriously ill surgical patient's journey from the pre-operative encounter, to the invasive procedure, to the post-operative setting, and on to survivorship. An overview of the future of surgical palliative care education and research rounds out the text. Surgical Palliative Care is an ideal resource for surgeons, surgical nurses, intensivists, and other practitioners who wish to learn more about integrating palliative care into the surgical field.

INTRODUCTION TO THE JOINT TRAUMA

SYSTEM (JTS) The Joint Trauma System (JTS) is the Department of Defense (DoD) authority for the military's trauma care system. The vision of the Joint Trauma System is that every Soldier, Sailor, Marine and Airman injured on the battlefield will have the optimum chance for survival and maximum potential for functional recovery. To achieve this vision, in 2006, the JTS implemented programs for data -driven trauma system development and improvement in addition to the collection of trauma data. As part of its data collection efforts, the JTS maintains a registry of trauma patients who received care at medical treatment facilities (MTFs). Since 2007, this registry – known as the DoD Trauma Registry (DoDTR) – has documented demographic, injury, treatment, and outcomes data for all trauma patients admitted to any DoD MTF, regardless of whether the injury occurred during on-going military operations, and is the largest military trauma data source in the world. Development of the DoDTR began during the early years of the Global War on Terror (GWOt) when the need to systematically improve trauma care for combat wounded resulted in

the impromptu creation of a demonstration registry, known then as the Combat Trauma Registry (CTR). The CTR was constructed by the Center for AMEDD Strategic Studies (CASS); trauma-related information was initially abstracted into it from paper medical records received from trauma nurse coordinators (TNCs) at Landstuhl Regional Medical Center (LRMC) in Germany. Shortly after the demonstration program started, the Army Surgeon General approved its transition to an operational mode, leading to the formation of the Joint Theater Trauma System (JTTS) and, eventually, the Joint Trauma System (JTS).

The definitive treatment on the medical evacuation and management of injured patients in both peace- and wartime. Edited by eminent experts in the field, this text brings together medical specialists from all four branches of the armed services. It discusses the history of aeromedical evacuation, triage and staging of the injured patient, evacuation from site of injury to medical facility, air-frame capabilities, medical capabilities in-flight, response to in-flight emergencies, and mass emergency evacuation. Specific medical conditions are addressed in detail, including such general surgical casualties as abdominal wounds and soft tissue, vascular, maxillofacial, head and spinal cord injuries, ophthalmologic, orthopaedic, pediatric, obstetric-gynecologic casualties, burns, and more. Over 80 illustrations provide a review of transport equipment and both medical and surgical treatment. A must-have

The aim of this book is to give readers a broad review of burn injuries, which may affect people from birth to death and can lead to high morbidity and mortality. The book consists of four sections and seven chapters. The first section consists of the introductory review chapter, which overviews the burn injuries. The second section includes chapter "Burn Etiology and Pathogenesis," which focuses on burn injuries and clinical findings. The third section consists of chapter "Controlling Inflammation in Burn Injury" and is devoted to the role of inflammatory response, which is fundamental to the healing process, while a prolonged inflammation may lead to scarring and fibrosis. The fourth section consists of four chapters as follows: "Therapeutic Effects of Conservative Treatments on Burn Scars," "Herbal Therapy for Burns and Burn Scars," "Platelet-Rich Plasma in Burn Treatment," and "Surgical Treatment of Burn Scars." The book is easy to read and includes hot topics on burn injury to enhance the reader's understanding and knowledge.

Edited by expert academics and educators, Brett Williams and Linda Ross, and written by content specialists and experienced clinicians, this essential resource encourages readers to see the links between the pathophysiology of a disease, how this creates the signs and symptoms and how these should to be managed in the out-of-hospital environment. Additionally, Paramedic Principles and Practice 2e will arm readers with not only technical knowledge and expertise, but also the non-technical components of providing emergency
