A drunk giant comes charging at you in a bar. Go with a roundhouse kick, Judo hip throw, or Karate punch to bring him to the ground. Your cheapskate neighbor refuses to pay you back. The next time he's on vacation, turn on his backyard hose. By the time he returns home, his yard will be a swamp and his water bill will be through the roof. Some juiced-up meathead starts trouble at the gym. Take him down to size with an Aikido wrist twist. There's more than one way to skin a cat—or kick someone's ass. In this rough and ready field guide, you'll find 365 ways to nail the bastards who try to get you down. Written under an alias by a man who's been there, done that, and lived to deny it all, this is all you need to protect and avenge yourself

This Festschrift volume has been published in honor of Frank de Boer, on the occasion of his 60th birthday. Frank S. de Boer is a prominent member of the research community in formal methods and theoretical computer science. A brief look at his lengthy publication list reveals a broad area of interest and a versatile modus operandi with: logic and constraint programming; deductive proof systems, soundness, and completeness; semantics, compositionality, and full abstraction; process algebra and decidability; multithreading and actor-based concurrency; agent programming, ontologies, and modal logic; real-time systems, timed automata, and schedulability; enterprise architectures, choreography, and coordination; testing and runtime monitoring; and cloud computing and service-level agreements. For a while, he also liked failures, especially in semantics, and optimistically concluded with the failure of failures. In fact, Frank has an opportunistic approach to research. Rather than seeing obstacles, he finds opportunities.
