An annual death toll of 2 million, coupled with rising drug resistance, highlights the need for the development of new drugs, better diagnostics, and a tuberculosis (TB) vaccine. Addressing these key issues, *A Color Atlas of Comparative Pathology of Pulmonary Tuberculosis* introduces TB histopathology to the non-histopathologists, students, scientists, and doctors working, learning, and teaching in the field of TB. It contains 100 color photographs and illustrations that bring clarity to the information presented. The atlas takes the unusual approach of covering multiple species histopathology, arguably the first and quite possibly the only resource to do so. It provides a simple, annotated, and visual presentation of the comparative histopathology of TB in human and animal models. The editors have compiled information that helps TB scientists to distinguish between the features of all major animal models available and to use them with their strengths and limitations in mind. The book provides guidance for selecting the best animal model(s) to answer specific questions and to test the efficacy of drug candidates. For over 60 years, residents and practicing pathologists have turned to Rosai and Ackerman's *Surgical Pathology* for definitive guidance on every aspect of the field, delivered in a readable, easy-to-digest, and engaging manner. In the 11th Edition, a dynamic new author team ensures that this classic text retains its signature anecdotal style, while revising the content to bring you fully up to date. Widely used for board exam preparation, as well as for everyday reference in practice, this leading resource equips you to effectively and efficiently diagnose the complete range of neoplastic and non-neoplastic entities. Provides comprehensive coverage of the clinical presentation, gross and microscopic features, ultrastructural and immunohistochemical findings, prognosis, and therapy for virtually every pathologic lesion. Presents content now grouped in sections corresponding to organs and systems, making disease entities easier to locate. Includes state-of-the-art coverage of the latest disease classifications, molecular biology and pathology, immunohistochemistry, genetics, prognostic/predictive markers, and more – all highlighted by more than 3,000 full-color illustrations of commonly seen pathologies. Showcases the knowledge and expertise of an innovative new author team: prolific author John R. Goldblum, MD (GI pathology, soft tissue tumors); Laura Lamps, MD (hepatobiliary, endocrine tumors, infectious disease); Jesse McKenney, MD (GU/GYN, soft tissue tumors); and Jeff Myers, MD (pulmonary, pleural, mediastinum); accompanied by a select list of subspecialty contributors.

Gain a clear understanding of pathophysiology and lab testing! Clinical Chemistry: Fundamentals and Laboratory Techniques prepares you for success as a medical lab technician by simplifying complex chemistry concepts and lab essentials including immunoassays, molecular diagnostics, and quality control. A pathophysiologic approach covers diseases that are commonly diagnosed through chemical tests — broken down by body system and category — such as respiratory, gastrointestinal, and cardiovascular conditions. Written by clinical chemistry educator Donna Larson and a team of expert contributors, this full-color book is ideal for readers who may have minimal knowledge of chemistry and are learning laboratory science for the first time. Full-color illustrations and design simplify complex concepts and make learning easier by highlighting important material. Case studies help you apply information to real-life scenarios. Pathophysiology and Analytes section includes information related to diseases or conditions, such as a biochemistry review, disease mechanisms, clinical correlation, and laboratory analytes and assays. Evolve companion website includes case studies and animations that reinforce what you've learned from the book. Laboratory Principles section covers safety, quality assurance, and other fundamentals of laboratory techniques. Review questions at the end of each chapter are tied to the learning objectives, helping you review and retain the material. Critical thinking questions and discussion questions help you think about and apply key points and concepts. Other Aspects of Clinical Chemistry section covers therapeutic drug monitoring, toxicology, transplantation, and emergency preparedness. Learning objectives in each chapter help you to remember key points or to analyze and synthesize concepts in clinical chemistry. A list of key words is provided at the beginning of each chapter, and these are also bolded in the text. Chapter summaries consist of bulleted lists and tables highlighting the most important points of each chapter. A glossary at the back of the book provides a quick reference to definitions of all clinical chemistry terms.
