Creating E-books in epub format is very important to sell E-books in electronic book stores. Most publishing and distribution E-book stores will not accept the epub format document for E-book if it includes any warnings or errors when validated and that is a very big challenge to all authors. I devoted this book to evaluate some tools that can be used for creating, validating and editing E-books to be in proper Epub format without errors. Personally, I suggest the following guidelines for preparing E-book in Epub format. • Write the document in Microsoft word as .docx file. Make sure to properly setup the h1headings and h2 headings and h3 headings on each section of the document as these data are the most important data used by the Epub management software to convert the document to epub format. • Convert the Microsoft document to Epub format using Calibre E-book management software. Add all required metadata and the cover and also create a table of contents when converting the file. • Using any Epub reader, check if the layout of epub document according to the headings you made on the word document is good and comfortable to any reader. • Validate the epub document to see if it has errors and warnings using the website http://validator.idpf.org. • Then try to troubleshoot and identify the exact location of the errors detected by the epub validator on the epub document by tracing the code view of the epub document using Sigil epub editor. Then, modify the word document to eliminate the errors. And reconvert the word document to epub format using Calibre E-book management software. Validate the updated epub document for any errors again. This book contains the following sections: 1. Some online publishing and distribution stores 2. Epub Validators 3. Creation Epub file through online websites 4. Common software's to convert a file to Epub format 5. Converting document to Epub format using Calibre software 6. Editing Epub documents using Sigil Epub Editor

Large Documents Because there are unique challenges faced with very large documents due to the consistency of Headers, Footers, Chapter Names, Indexes, Table of Contents, and many other Large Document challenges. Chapters 15-24 will allow you to enter special commands and build a long document structure. You will also learn how to create Tables, insert rows/columns, add borders, backgrounds, merge cells, combine cells, and convert text to a Table. As text is entered, a Page will Break automatically, or you can insert a specific code to Break the Page such as Section Break, Odd Page Break, and Column Break. Placing Headers and Footers on each page can finalize a document for printing, but you may want the chapter header to be different for each chapter. Therefore, this manual will cover how to use Page Breaks to stop formatting between pages to allow one page for Landscape and the next page to switch back to Portrait. Also, specific pages can be split into Multiple Columns to provide a Newsletter Style layout. We will also explain how to use the Draft View and Show/Hide marks to see hidden codes such as Page Breaks and Index markers. We will also cover adding an Index and other References for legal documents at the end of a document. Also, Quick Parts will allow you to store Watermarks, Cover Pages, and other objects in a library to provide quick and consistent layouts. Finally, the final project will focus on creating Large Documents including Table Of Contents, Index, Section Breaks, etc. We have also added several optional special topics to the Appendix such as Forms, Macros, and Mail Merge.
