This book tells of the challenges faced by white and black school administrators, teachers, parents, and students as Alachua County, Florida, moved from segregated schools to a single, unitary school system. After *Brown v. Board of Education*, the South's separate white and black schools continued under lower court opinions, provided black students could choose to go to white schools. Not until 1968 did the NAACP Legal Defense Fund convince the Supreme Court to end dual school systems. Almost fifty years later, African Americans in Alachua County remain divided over that outcome. A unique study including extensive interviews, *We Can Do It* asks important questions, among them: How did both races, without precedent, work together to create desegregated schools? What conflicts arose, and how were they resolved (or not)? How was the community affected? And at a time when resegregation and persistent white-black achievement gaps continue to challenge public schools, what lessons can we learn from the generation that desegregated our schools?

The authors describes the potential scope and application of the various legal provisions which regulate competition in the UK. This book also examines the results of the convergence of UK and EC law with regard to competition in business.

Handbook of Intercultural Training, Volume I: Issues in Theory and Design is a compilation of nine essays dealing with a problem central to today's complex world: "How can people best live and work with others who come from very different cultural backgrounds?" The major focus of the nine essays in this book is the experience of living and working for long periods in other cultures. The book also focuses on other types of cross-cultural experiences, such as majority-minority group relations, training and preparation, and integration. There are analyses of possible experiences people may have, such as stress during adjustments. Other authors in this book address the benefits of intercultural action and integration into a country's educational system. International education is seen to benefit through a greater attention to face-to-face cross-cultural experience. The first seven essays are good descriptions of intercultural behavior and training, while Chapter 8 is an evaluation of cross-cultural training. The last chapter describes the atlas of affective meanings containing 620 concepts from 30 languages/culture communities for use in intercultural training and education. Behavioral and social scientists, trainers and cross-cultural scientists, overseas businessmen, foreign students, diplomats, immigrants, and other people who work in different cultures will find this handbook very helpful.

Called "one of our best science popularizers" by Publishers Weekly, Amir Aczel now tackles the cause of one of last century's most destructive events -- the scientific discovery of nuclear power. Drawing on his rich storytelling skills, Aczel presents the

fascinating and suspenseful story of the scientists who first uncovered the potential of uranium. Uranium Wars takes the reader on a whirlwind tour of 1920s Europe where the scientific elite of the day were embroiled in a fierce rivalry to achieve nuclear fission. Leading us to an understanding of both the processes that take place inside a uranium nucleus and its destructive power are the brilliant men and women at the heart of the race -- mammoth figures such as Marie Curie, Enrico Fermi, and Lise Meitner. Enmeshed in the story of scientific intrigue is the complex and ongoing story of uranium itself, which Aczel presents as a dynamic, dual natured force, capable of providing both abundant usable energy and generating unfathomable destructive power. From the nuclear programs in the Middle East to plans for nuclear reactors at home, the element uranium is never far from today's headlines.

"This book continues the narrative begun by the author in the preceding volume. This new work provides a clear and readable description of military combat occurring in Latin America for the years 1948 to the start of 1982. Though concentrating on a combat narrative, matters of politics, business and international relations appear as necessary to understand the wars"--Provided by publisher.

What if the solution to student debt was reinvesting in yourself? Are you a smart, hard-working person who always seems to struggle financially? Do you ever second-guess decisions to pursue higher education because of your student loans? Has extreme budgeting eliminated joy and comfort from life, yet you're still several years away from being debt-free? Conventional wisdom tells us the formula for success is simple: go to school, get a job, work hard, repeat as needed until you retire. It tells us that debt is the result of poor choices and irresponsible spending. Unfortunately, such advice fails to take into account the recent (and not-so-recent) graduates for whom predatory student lending rates have set them back tens or even hundreds of thousands of dollars before they even enter the job market. In Buy the Avocado Toast, Stephanie Bousley shares lessons learned through years of working hard and perpetually undervaluing herself while coming to terms with owing almost \$300,000 in student debt. Through a holistic approach to both net worth and self-worth, Bousley offers readers hope for their own financial situations by providing step-by-step instructions on reducing debt, living better, and rooting out the self-defeating beliefs that keep us broke.

New section singling out six classic theologians of the twentieth century. Expanded treatment of the natural sciences, gender, Roman Catholic theology since Vatican II, and African, Asian and Evangelical theologies. Completely new chapters on spirituality, pastoral theology, philosophical theology, postcolonial biblical interpretation, Pentecostal theology, Islam and Christian theology, Buddhism and Christian theology, and theology and film. As in previous editions, the text opens with a full introduction to modern theology. Epilogue discussing the present situation and prospects of Christian theology in the twenty-first century.

Understanding causal structure is a central task of human cognition. Causal learning underpins the development of our concepts and categories, our intuitive theories, and our capacities for planning, imagination and inference. During the last few years, there has been an interdisciplinary revolution in our understanding of learning and reasoning: Researchers in philosophy, psychology, and computation have discovered new mechanisms for learning the causal structure of the world. This new work provides a rigorous, formal basis for theory theories of concepts and cognitive development, and moreover, the causal learning mechanisms it has uncovered go dramatically beyond the traditional mechanisms of both nativist theories, such as modularity theories, and empiricist ones, such as association or connectionism.

The first full-scale sociological survey of the assimilation of minorities in America, this classic work presents significant conclusions about the problems of prejudice and discrimination in America and offers positive suggestions for the achievement of a healthy balance among societal, subgroup, and individual needs.

Everyday Finances for the Everyday Family takes the mystery out of s-t-r-e-t-c-h-i-n-g our hard-earned dollars. In fact, the secret to

successful living can be summed up in three simple steps: we must (1) deny some of our wants, (2) spend less than we earn, and (3) avoid “bad debts,” such as carrying a high balance on a credit card. This easy-to-read resource guides families through commonsense principles that can help them budget, spend, and save money wisely.

This masterly book substantially extends Howard Raiffa’s earlier classic, *The Art and Science of Negotiation*. It does so by incorporating three additional supporting strands of inquiry: individual decision analysis, judgmental decision making, and game theory. Each strand is introduced and used in analyzing negotiations. The book starts by considering how analytically minded parties can generate joint gains and distribute them equitably by negotiating with full, open, truthful exchanges. The book then examines models that disengage step by step from that ideal. It also shows how a neutral outsider (intervenor) can help all negotiators by providing joint, neutral analysis of their problem. Although analytical in its approach—building from simple hypothetical examples—the book can be understood by those with only a high school background in mathematics. It therefore will have a broad relevance for both the theory and practice of negotiation analysis as it is applied to disputes that range from those between family members, business partners, and business competitors to those involving labor and management, environmentalists and developers, and nations.

Cognitive science is a cross-disciplinary enterprise devoted to understanding the nature of the mind. In recent years, investigators in philosophy, psychology, the neurosciences, artificial intelligence, and a host of other disciplines have come to appreciate how much they can learn from one another about the various dimensions of cognition. The result has been the emergence of one of the most exciting and fruitful areas of inter-disciplinary research in the history of science. This volume of original essays surveys foundational, theoretical, and philosophical issues across the discipline, and introduces the foundations of cognitive science, the principal areas of research, and the major research programs. With a focus on broad philosophical themes rather than detailed technical issues, the volume will be valuable not only to cognitive scientists and philosophers of cognitive science, but also to those in other disciplines looking for an authoritative and up-to-date introduction to the field.
