Ever since the beginning of the world, man has contained within him an insatiable desire to be the captain of his own ship and master of his own fate. It's a natural flaw in man in our fallen state. It really becomes problematic when pride prevents one from looking outside their selves for help or for the correct answers in life. It's not that God has abandoned us with no direction or answers, it is simply the failure to launch in oneself a humbling posture to allow us to receive that which God has given to us freely""his wisdom. "If any of you lacks wisdom, let him ask God, who gives generously to all without reproach, and it will be given him" (Jas 1:5, ESV). After years of history on display, man makes the same mistake every day. He understands what faith is and knows how to apply it but fails to seek out wisdom to point him in the right direction to place his faith. Where you place your faith determines the directions your path of life will be. Will you travel the long, hard, pothole-ridden dusty road, or the well""paved, smooth, and straight road that sojourners decided to take before you to success. Why not follow them and make it easier on yourself? The book is my commentary of examples from my life where it seemed I always did it the hard way. Taking the wrong road because I trusted my feelings instead of the trusted GPS (men never stop to ask for directions). I wrote this book from my failures and my search for truth to help others reach for wisdom in decision-making processes. Of course, everyone still has that great gift from God of freedom of choice to make decisions in what they think is right. In the end, it may lead to the lemonade stand. (Proverbs 14:12)

Econometric Modeling provides a new and stimulating introduction to econometrics, focusing on modeling. The key issue confronting empirical economics is to establish sustainable relationships that are both supported by data and interpretable from economic theory. The unified likelihood-based approach of this book gives students the required statistical foundations of estimation and inference, and leads to a thorough understanding of econometric techniques. David Hendry and Bent Nielsen introduce modeling for a range of situations, including binary data sets, multiple regression, and cointegrated systems. In each setting, a statistical model is constructed to explain the observed variation in the data, with estimation and inference based on the likelihood function. Substantive issues are always addressed, showing how both statistical and economic assumptions can be tested and empirical results interpreted. Important empirical problems such as structural breaks, forecasting, and model selection are covered, and Monte Carlo simulation is explained and applied. Econometric Modeling is a self-contained introduction for advanced undergraduate or graduate students. Throughout, data illustrate and motivate the approach, and are available for computer-based teaching. Technical issues from probability theory and statistical theory are introduced only as needed. Nevertheless, the approach is rigorous, emphasizing the coherent formulation, estimation, and evaluation of econometric models relevant for empirical research.

In this sequel to the highly acclaimed *Scientific Realism: How Science Tracks Truth*, Psillos discusses recent developments in scientific realism and explores realist theses and commitments. He examines the structuralist turn in the philosophy of science and offers a framework within which inference to the best explanation can be defended.

This book is the first broad history of the growing field of bioethics. Covering the period 1947-1987, it examines the origin and evolution of the debates over human experimentation, genetic engineering, organ transplantation, termination of life-sustaining treatment, and new reproductive technologies. It assesses the contributions of philosophy, theology, law and the social sciences to the expanding discourse of bioethics. Written by one of the field's founders, it is based on extensive archival research into resources that are difficult to obtain and on interviews with many leading figures. A very readable account of the development of bioethics, the book stresses the history of ideas but does not neglect the social and cultural context and the people involved.

"Two trends in the early twenty-first-century intersect to give this volume immediate relevance: 1) The emerging postmodern ethos in North America is calling into question many things we have taken for granted, including the purposes of the church; and 2) our time is increasingly fractious as groups with distinct worldviews become polarized and often antagonistic. Eleven noted contributors join a growing current that sees conversation as an image to refresh our thinking about the nature and purpose of the church, and as a process in which individuals and communities with different perspectives come together for real understanding. Under the Oak Tree employs the image of Sarah and Abraham greeting three visitors under the Oaks of Mamre as an image for the church as a community of conversation, a community that opens itself to the otherness of the Bible, voices in history and tradition, others in the contemporary social and ecological worlds. Furthermore, the book shows how conversation can lead the church to action. The book takes a practical approach by exploring how conversation can shape key parts of the church's life.

Topics include preaching, worship, formation, evangelism, pastoral care, mission and ecumenism, social witness, and the relationship of Christianity to other religions. Foundational chapters consider God as conversational, the church as community of conversation, and the minister as conversation leader. "

This new book introduces a new generation to the important insights of Paul Meehl. In addition to selected papers from the classic reader, *Psychodiagnosis*, this book features new material selected from Meehl's most influential writings. The resulting collection is a tour de force illustrating quantitative analysis of life science problems, an examination of the inadequacy of some methods of analysis, and a review of the application of taxometrics. A Paul Meehl Reader is organized into five content areas: theory building and appraisal - how we discover and test the true causal relations of psychological constructs; specific etiology - an examination of genetic, behavioral, and environmental etiology in psychopathology; diagnosis and prediction - a review of the appropriate use of base rates; taxometrics - a look at Meehl's development of the method he invented; thinking effectively about psychological questions - a critique of correlation research and the power of quantitative thinking in psychology. The Reader features section introductions to orient the reader and provide a context and structure for Paul Meehl's work. The section on diagnosis and prediction features problem sets with solutions to guide the reader through practical applications of the principles described. An accompanying DVD contains footage from Paul Meehl's engaging seminar on clinical versus statistical prediction. This book appeals to advanced students and professionals in psychology, sociology, law, education, human development, and philosophy. This book attempts to explicate and expand upon Frank Ramsey's notion of the realistic spirit. In so doing, it provides a systematic reading of his work, and demonstrates the extent of Ramsey's genius as evinced by both his responses to the *Tractatus Logico-Philosophicus*, and the impact he had on Wittgenstein's later philosophical insights.

' . . . this is a good book that will well serve both students who are new to Ramsey and those who might not be better acquainted with his work . . . '-THE JOURNAL OF RELIGION

Donald Allchin was an ordained priest in the Church of England, a historian, ecumenist, and contemplative theologian. The essays, poems, and memoirs in this book represent what his Christian vision has brought forth in the lives of the contributors. You will meet poets, historians, bishops, archbishops, monks, priests, lay persons, and scholars. You will taste the rich ecumenical dialogue between Allchin's Anglican heritage, Eastern Orthodox Churches, the Roman Catholic Church, and churches of the Reformed Traditions, including Allchin's friendships and correspondence with Thomas Merton and the Romanian Orthodox theologian Dumitru Staniloae. Readers will gain insights into Allchin's interpretation of the Anglican Tradition and his emphasis on the value of monastic solitude and community for the lives of modern Christians. You will enter Allchin's journey into the lives, poetry, saints, and holy places of the Welsh spiritual tradition. And this is only a taste of his legacy. In Allchin's words, The essays selected for this volume show how relations between past, current and future generations have become a major subject of philosophical research since the 1970s. The relations between people alive today with people who may exist in the future and people now deceased, differ from relations between contemporaries and in ways that raise new conceptual, logical and

substantive questions. Among the questions addressed in this volume are: what is the status of people now deceased and people who may exist in the future? Can the latter be harmed by the actions of people alive today? What duties of justice do we have towards people with whom we can neither interact nor co-operate, and can people who are indirect victims of past injustices legitimately claim compensation? Answers to these questions are relevant in a number of policy areas, most notably in issues regarding reparations for historical injustice and responding to climate change and its consequences.

'If' is one of the most important words in the English language, being used to express hypothetical thought. The use of conditionals such as 'if' distinguishes human intelligence from that of other animals. In this volume, the authors present a theoretical approach to understanding conditionals.

An account of the different ways in which things have become cognitive extensions of the human body, from prehistory to the present. An increasingly influential school of thought in cognitive science views the mind as embodied, extended, and distributed rather than brain-bound or "all in the head." This shift in perspective raises important questions about the relationship between cognition and material culture, posing major challenges for philosophy, cognitive science, archaeology, and anthropology. In *How Things Shape the Mind*, Lambros Malafouris proposes a cross-disciplinary analytical framework for investigating the ways in which things have become cognitive extensions of the human body. Using a variety of examples and case studies, he considers how those ways might have changed from earliest prehistory to the present. Malafouris's Material Engagement Theory definitively adds materiality—the world of things, artifacts, and material signs—into the cognitive equation. His account not only questions conventional intuitions about the boundaries and location of the human mind but also suggests that we rethink classical archaeological assumptions about human cognitive evolution.

A thoroughly revised and updated edition of the leading textbook on government and business policy, presenting the key principles underlying sound regulatory and antitrust policy. Regulation and antitrust are key elements of government policy. This new edition of the leading textbook on government and business policy explains how the latest theoretical and empirical economic tools can be employed to analyze pressing regulatory and antitrust issues. The book departs from the common emphasis on institutions, focusing instead on the relevant underlying economic issues, using state-of-the-art analysis to assess the appropriate design of regulatory and antitrust policy. Extensive case studies illustrate fundamental principles and provide insight on key issues in regulation and antitrust policy. This fifth edition has been thoroughly revised and updated, reflecting both the latest developments in economic analysis and recent economic events. The text examines regulatory practices through the end of the Obama and beginning of the Trump administrations. New material includes coverage of global competition and the activities of the European Commission; recent mergers, including Comcast-NBC Universal; antitrust in the new economy, including investigations into Microsoft and Google; the financial crisis of 2007–2008 and the Dodd-Frank Act; the FDA approval process; climate change policies; and behavioral economics as a tool for designing regulatory strategies.

Peace, Purpose, and Potential began as a ministry tool for inmates in the state prison system, particularly the ones locked down in the cell blocks. These are guys that Reed desires to disciple but might only see once. It is a collection of things that he wants to share with them from the Bible and things he has learned through his own struggles and God's faithfulness. For us to improve our life and realize our potential, we must learn to make better decisions. In other words, we must be transformed by the renewing of our mind. As Reed began writing, he

realized that a maturing Christian in the prison system is not that different from a maturing Christian outside the prison system, so the focus is not only on inmates but maturing Christians in general of all ages. Chapters 1–4 address biblical principles; then the focus changes from principles to life application of those principles in chapters 5–15. The goal of Peace, Purpose, and Potential is to inspire maturing Christians to pursue peace, purpose, and their God-given potential in all aspects of their life!

Causal powers are ubiquitous. Electrons are negatively charged; they have the power to repel other electrons. Water is a solvent; it has the power to dissolve salt. We use concepts of causal powers and their relatives—dispositions, capacities, abilities, and so on—to describe the world around us, both in everyday life and in scientific practice. But what is it about the world that makes such descriptions apt? On one view, the neo-Humean view, there is nothing intrinsic about, say, negative charge, that makes its bearers have the power to repel other negatively charged particles. Rather, matters extrinsic to negative charge, the patterns and regularities in which negatively charged particles are embedded, fix the powers its bearers have. But on a different view, the anti-Humean view, causal powers are intrinsically powerful, bringing with them their own causal, nomic, and modal nature independent of extrinsic patterns and regularities—even fixing those patterns and regularities. This collection brings together new and important work by both emerging scholars and those who helped shape the field on the nature of causal powers, and the connections between causal powers and other phenomena within metaphysics, philosophy of science, and philosophy of mind. Contributors discuss how one who takes causal powers to be in some sense irreducible should think about laws of nature, scientific practice, causation, modality, space and time, persistence, and the metaphysics of mind.

Work isn't supposed to be a four-letter word! Does the work you do matter to you? Are you unsure what you want to do for a living? Are you in the right place but looking to advance? No matter where you are in your career, you were born to do work you love. National bestselling author and career expert Ken Coleman was stuck in an unfulfilling career until he realized he didn't have to be. In his latest book, he draws on what he learned from his own ten-year journey as well as from coaching thousands of others to walk you through the seven stages to discovering and doing meaningful work. Relevant to any job or industry, you'll learn step-by-step how to: Get Clear on the work you were uniquely made to do and why. Get Qualified to do the work you were created for. Get Connected with the right people who can open the doors to your dream. Get Started by overcoming the emotions and mistakes that often hold people back. Get Promoted by developing winning habits and traits. Get Your Dream Job by doing work you love and accomplishing results that matter to you. Give Yourself Away by expanding the dream to leave a legacy. This is your moment. You are needed, and you were made to contribute. It's time to exit the daily grind and use your talents to start living your dream once and for all.

John Wesley strived for a theology--a theology both written and lived--that delicately balanced sanctification and justification. He hoped to uphold both "faith alone" and "holy living." Sadly, says theologian H. Ray Dunning, many of Wesley's followers have not maintained that balance. Some have tended toward legalism, some toward a preoccupation with personal holiness, and others toward social activism with little theological grounding. Dunning believes Wesleyanism possesses the resources to help all Christians "reflect the divine image," and to do so holistically, in all aspects of life. His book incisively examines issues of ethical methodology and then shows how an ethic based on the "Imago Dei" shapes our relation to God, to one another and to the earth. This introduction to and overview of ethics will enlighten and benefit Christians in all traditions, not despite but especially because it is written in the true Wesleyan tradition--passionate, profoundly faithful and plainspoken.

First published in 1974, Charles Fried's *Medical Experimentation* is a classic statement of the moral relationship between doctor and patient,

as expressed within the concept of personal care. This concept is then tested in the context of medical experimentation and, more specifically, the randomized controlled trial (RCT). Regularly referred to as a point of departure for ethical and legal discussions of the RCT, the book has long been out of print. This new, second edition includes a general introduction by Franklin Miller and the late Alan Wertheimer, a reprint of the 1974 text, and an in-depth analysis by Harvard Law School scholars I. Glenn Cohen and D. James Greiner which discusses the extension of RCTs to social science and public policy contexts. The volume concludes with a new essay by Charles Fried that reflects on the original text and how it applies to the contemporary landscape of medicine and medical experimentation.

Includes extra and special sessions.

This volume gathers twelve essays by David Wiggins in an area where his work has been particularly influential. Among the subjects treated are: persistence of a substance through change, the notion of a continuant, the logic of identity, the co-occupation of space by a continuant and its matter, the relation of person to human organism, the metaphysical idea of a person, the status of artefacts, the relation of the three-dimensional and four-dimensional conceptions of reality, and the nomological underpinning of sortal classification. From a much larger body of work the author has selected, edited or annotated, and variously shortened or extended eleven pieces. He has added an Introduction and one completely new essay, on the philosophy of biology and the role there of the idea of process. The collection begins with an essay postdating his *Sameness and Substance Renewed* (2001), which amends and upstages his earlier presentation of his sortalist conception of identity. In subsequent essays and the introduction Wiggins examines the contributions to these subjects made by Heraclitus, Aristotle, Leibniz, Roderick Chisholm, Hilary Putnam, Sydney Shoemaker, Michael Ayers, Saul Kripke, W. V. Quine, David Lewis, Fei Xu, and others.

This new edition includes three new chapters, updating the book to take into account developments in the field over the past fifteen years.

The explosive, never-before-revealed story of how William Rehnquist became a Supreme Court Justice, told by the man responsible for his candidacy.

A collection of important recent work on the counterfactual analysis of causation.

This book develops a general economic theory that integrates various economic theories and ideas and establishes important relationships between economic variables that are not formally recognized in the economic literature. The author demonstrates how the basic model is integrated with neoclassical growth theory, Walrasian general equilibrium theory, and Ricardian distribution theory, and how these theories can be incorporated through a single set of equations with a microeconomic basis. The book offers new insights into income and wealth distribution between heterogeneous households, racial and national differences in growth and development, interdependence between different stock variables with portfolio choices among different markets. It will appeal to scholars of economists interested in an

integrative theoretical approach to this discipline.

Hume's Philosophy of Religion brings together for the first time the whole range of Hume's immensely important critique of religion. The major concern is with a clear discussion and presentation of philosophical issues wherever they occur in Hume's writings, but items in the history of ideas, questions of interpretation and biographical details are introduced when they contribute to an understanding of Hume's position. Already reviewed as a standard work on Hume on religion and as a good general introduction to Hume's thought, this new edition has been extensively revised and extended. '...it is hard to imagine how a study of Hume on religion could have been at once more comprehensive, accurate, readable and scholarly than this...it is strongly to be recommended to all who have occasion to study or to teach Hume in colleges or universities.' W.D.Hudson, Expository Times.

Victory in Marriage will tell you things most married couples wish they knew before marriage began. The wedding, prayer, money, sex, long-distance relationships, dating, and many other topics will be dissected, and hopefully you'll learn something that will equip you to be the kind of spouse you want to be married to! Whether you're single, engaged, or married, you can gain something if you invite God into your reading. You'll be encouraged, laugh a little, and struggle with breaking down difficult notions we've grown up hearing most probably false like how marriage is something you do simply because I love them! and how you should end your marriage if you aren't happy. Wife since 2014, singer since she can remember, Sarah Maxwell defines her worth in seeking Christ-likeness in all aspects of her life, even when she falls short. Sarah has written many blogs on various topics and hopes to publish a book for women as well as children's picture books in the near future, but Victory in Marriage is her first published book. She doesn't consider herself qualified to write about marriage because of age or years married, but simply because of her teachable spirit upon entering marriage. I haven't been married long, Sarah says, but I entered marriage with God already the Lord of my life, and my husband did also, and from there, being married committedly is what makes me qualified. She admits she has expectations she'll gain wisdom from her readers as she inevitably gets feedback about Victory in Marriage even if it changes her mind a little on some things. I hope Victory in Marriage creates teachable moments for you as it did for me when I wrote it, Sarah shares. As you read, consult scriptures and prayerfully take your time reading, and contact me to discuss any discrepancies, concerns, or inspiring moments further with me. Victory in Marriage is filled with beautifully written, authentic advice of how to do marriage well. Sarah covers a multitude of topics and consistently points to Jesus through each subject. This volume examines the Supreme Court's rulings in U.S. v. Windsor and Obergefell v. Hodges in light of its earlier rulings while also incorporating several prominent accounts of marriage and the family from the history of political philosophy.

First Published in 1991. Routledge is an imprint of Taylor & Francis, an informa company.

William Shakespeare, more than any other author, was able to capture the essence of human nature in all its manifestations. His

political plays offer enduring insights into our humanity, our vanity, our noble and baser drives, what makes us great, and what makes us loathsome. He tells us about ourselves and about our world. This volume gleans valuable lessons from the writings of William Shakespeare and applies them to contemporary politics. Original chapters covering over a dozen different plays take up perennial political themes including power and leadership, corruption and virtue, war and peace, evil and liberty, persuasion and polarization, and empire and global overreach. Features of the text:

This volume handles in various perspectives the concept of function and the nature of functional explanations, topics much discussed since two major and conflicting accounts have been raised by Larry Wright and Robert Cummins' papers in the 1970s. Here, both Wright's 'etiological theory of functions' and Cummins' 'systemic' conception of functions are refined and elaborated in the light of current scientific practice, with papers showing how the 'etiological' theory faces several objections and may in reply be revisited, while its counterpart became ever more sophisticated, as researchers discovered fresh applications for it. Relying on a firm knowledge of the original positions and debates, this volume presents cutting-edge research evincing the complexities that today pertain in function theory in various sciences. Alongside original papers from authors central to the controversy, work by emerging researchers taking novel perspectives will add to the potential avenues to be followed in the future. Not only does the book adopt no a priori assumptions about the scope of functional explanations, it also incorporates material from several very different scientific domains, e.g. neurosciences, ecology, or technology. In general, functions are implemented in mechanisms; and functional explanations in biology have often an essential relation with natural selection. These two basic claims set the stage for this book's coverage of investigations concerning both 'functional' explanations, and the 'metaphysics' of functions. It casts new light on these claims, by testing them through their confrontation with scientific developments in biology, psychology, and recent developments concerning the metaphysics of realization. Rather than debating a single theory of functions, this book presents the richness of philosophical issues raised by functional discourse throughout the various sciences.?

This landmark study examines the largest clinical sample to date of male survivors of sexual abuse in childhood. Using data from his nationwide North American survey, the author reveals that such abuse is extensive, thus dispelling myths regarding the invulnerability of males. Mendel argues that various societal myths have led to a profound under-recognition of male childhood sexual abuse. He proposes that increased attention to, and acknowledgement of, male victimization is needed in order to reduce both the stigma and isolation of male survivors and the incidence of abuse. The author also suggests modifications to conceptual frameworks related to the long-term impact of childhood sexual abuse to apply specifically to male
