Strategic Debate is designed for beginning through intermediate debaters. The text engages students intellectually, analytically, and verbally, and contains thorough coverage of fundamentals, affirmative and negative cases, and recent trends in competitive presentation.

DEBATE...Give your students a voice! Based upon the authors' many years of experience as successful high school debate teachers and coaches, Debate presents a practical approach to students enabling them to do objective research on their debate topics. This contemporary text is designed to give students opportunities to research, write speeches, and experience public speaking and competitive debate. Using a wealth of examples and including the role of ancient philosophers, students are instructed to use the latest research techniques. By presenting influential historical connections, students learn how the classical debates have shaped the contemporary public forum. Debate includes up-to-date trends and Internet research, now an important step in debate preparation, and identifies all forms of argumentation in all forms of debate. Ongoing review and assessment help students understand the material. Features include ethical discussions, great debate references, group activity/cooperative learning, and

personal views from well-known people of how debate is used in the workplace. Important Notice: Media content referenced within the product description or the product text may not be available in the ebook version.

Regional studies are at a vibrant juncture. 'Regions' continue to provide a conceptual and analytical focus for often overlapping concerns with economic, social, political, cultural and ecological change. In the context of increased interest in inter- and multi-disciplinary approaches, 'regions' remain an arena in which synthesis across disciplines – economics, geography, planning, politics and sociology – can take place. Yet recent work has raised fundamental questions about how we think about and research 'regions' and regional change, 'development', governance and regulation. First, emergent conceptual ideas have introduced new thinking about space, place and scale that interprets 'regions' as 'unbounded', relational spaces. This work has disturbed notions of 'regions' as bounded territories and questioned hierarchical systems of scale through more complex, multi-scalar approaches. Second, research methodology has grown in sophistication and sensitivity but remains somewhat polarised between the binaries of positivist, often quantitative, and more theoretically

diverse, typically qualitative, approaches. Last, regional governance, policy and politics are wrestling with the conceptual, methodological and political complexities of new modes and geographies of governance and emergent multi-agent and multi-level institutional architectures. This book brings together important voices in regional studies to contribute to and reflect upon these current issues and debates. While we are at an early stage in beginning to think through what such conceptual, theoretical, methodological, governance, policy and political innovations and developments mean for regional studies, the magnitude and resonance of such issues underpin the vitality of research on the region. This book was published as a special issue of *Regional Studies*. This book constitutes the thoroughly refereed proceedings of the First International Workshop on the Theory and Applications of Formal Argumentation, TAFAs 2011, held in Barcelona, Spain, in July 2011, as a workshop at IJCAI 2011, the 22nd International Joint Conference on Artificial Intelligence. The 9 revised full papers presented together with 8 revised poster papers were carefully selected during two rounds of reviewing and improvement from 32 initial submissions. The workshop promotes and fosters uptake of argumentation as a viable AI paradigm with wide ranging application, and provides a forum for further development of ideas and the initiation of new and innovative collaborations. papers cover the following topics: properties of formal models of argumentation; instantiations of abstract argumentation frameworks; relationships among different argumentation frameworks; practical applications of formal models of argumentation; argumentation and other artificial intelligence techniques; evaluation of formal models of argumentation; validation and evaluation of applications of argumentation.

This book examines spatialised practices of remembrance and its role in reshaping societies from prehistory to today; it presents a reflection on the creation of memories through the organisation and use of landscapes and spaces that explicitly considers the multiplicity of meanings of the past.

10 Performance-Based STEM Projects for Grades 2-3 provides 10 ready-made projects designed to help students achieve higher levels of thinking and develop 21st-century skills while learning about science, technology, engineering, and math. Projects are aligned to national standards and feature crosscurricular connections, allowing students to explore and be creative as well as gain an enduring understanding. Each project is linked to national STEM education goals and represents one of a variety of performance assessments, including oral presentations, research papers, and exhibitions. Included for each project are a suggested calendar to allow teachers to easily plan a schedule, mini-lessons that

This book offers advice to beginning doctoral researchers and advanced graduate students on how to embark on their research. Based on a decade of teaching early-stage researchers in the social sciences at the LSE and other universities, and written with the central problems that starting researchers face in mind, it guides them through the process of thinking about the links between theory, cases and data. This lively book, which is deliberately kept jargon-free and adopts a hands-on approach to research design, addresses the problems that research students face - or ignore, often at their peril - in the course of their first few years. Its central message is that research is a complex and iterative process in which researchers construct every relevant part of their project with one goal in mind: make a convincing argument. The Appendix gives tips on presenting and discussing papers, and on crafting research proposals.

This collection of papers investigates the most recent debates about individualism and holism in the philosophy of social science. The debates revolve mainly around two issues: firstly, whether social phenomena exist *sui generis* and

how they relate to individuals. This is the focus of discussions between ontological individualists and ontological holists. Secondly, to what extent social scientific explanations may and should, focus on individuals and social phenomena respectively. This issue is debated amongst methodological holists and methodological individualists. In social science and philosophy, both issues have been intensively discussed and new versions of the dispute have appeared just as new arguments have been advanced. At present, the individualism/holism debate is extremely lively and this book reflects the major positions and perspectives within the debate. This volume is also relevant to debates about two closely related issues in social science: the micro-macro debate and the agency-structure debate. This book presents contributions from key figures in both social science and philosophy, in the first such collection on this topic to be published since the 1970s.

Widely praised, ARGUMENTATION AND DEBATE, 13E, uses a clear, concise, and engaging presentation that makes even complex material easy for students to understand. The authors have adapted the text over the years to match changing practices in debate and teaching while preserving classical and conventional approaches to learning debate. This edition retains its rhetorical roots with a flexible tone open to a diverse array of debate styles that is

appropriate in the contemporary context. It values the importance of inclusion and sensitivity to differences of culture, gender, orientation, class and other factors as they impact communicative choices and argumentation. The authors have a preference for team topic evidence-based policy debate; however, the text strives to offer viable tools for a wide range of readers interested in improving their critical thinking for reasoned decision making. Employee participation encompasses the range of mechanisms used to involve the workforce in decisions at all levels of the organization - whether direct or indirect - conducted with employees or through their representatives. In its various guises, the topic of employee participation has been a recurring theme in industrial relations and human resource management. One of the problems in trying to develop any analysis of participation is that there is potentially limited overlap between these different disciplinary traditions, and scholars from diverse traditions may know relatively little of the research that has been done elsewhere. Accordingly in this book, a number of the more significant disciplinary areas are analysed in greater depth in order to ensure that readers gain a better

appreciation of what participation means from these quite different contextual perspectives. Not only is there a range of different traditions contributing to the research and literature on the subject, there is also an extremely diverse sets of practices that congregate under the banner of participation. The handbook discusses various arguments and schools of thought about employee participation, analyzes the range of forms that participation can take in practice, and examines the way in which it meets objectives that are set for it, either by employers, trade unions, individual workers, or, indeed, the state. In doing so, the Handbook brings together leading scholars from around the world who present and discuss fundamental theories and approaches to participation in organization as well as their connection to broader political forces. These selections address the changing contexts of employee participation, different cultural/ institutional models, old/'new' economy models, shifting social and political patterns, and the correspondence between industrial and political democracy and participation.

Legislative debates make democracy and representation work. Political actors engage in legislative debates to make their voice heard to voters. Parties use debates to shore up their brand. This book makes the most comprehensive study of legislative debates thus far, looking at the politics of legislative debates in 33 liberal democracies in Europe, North America and Latin America, Africa, Asia, and Oceania. The book begins with theoretical chapters focused on the key concepts in the study of legislative debates. Michael Laver, Slapin and Proksch, and Taylor examine the politics of legislative debates in parliamentary and presidential democracies. Subsequently, Goplerud makes a critical review of the methodological challenges in the study of legislative debates. Schwalbach and Rauh further discuss the difficulties in the comparative empirical study of debates. Country-chapters offer a wealth of original material organized around structured sections. Each chapter begins with a details discussion of the institutional design, focusing on the electoral system, legislative organization, and party parties, to which a section on the formal and informal rules of legislative debates ensues. Next, each country chapter focuses on analyzing the determinants of floor access, with a particular emphasis on the role of gender, seniority, legislative party positions, among others. In the concluding chapter, the editors explore comparative patterns and point out to multiple research avenues

The Economics of Public Spending investigates the extent of government involvement in the economy, details its rationale, and traces its historical record. The book unites articles previously published in Fiscal Studies, each one addressing a different area of expenditure and written by an economist specializing in that field. They describe both the data on public expenditure and

the theory relevant to understanding the policy issues. A new introduction investigates the overall role of the public sector and discusses the general theory of public expenditure. In providing a detailed analysis of public expenditure, the book makes an important contribution to the economics literature. There are no other texts with this breadth of coverage or depth of analysis. Insights are provided into both the policy issues, cross-country comparisons of expenditure, and alternative approaches to economic analysis. The chapters apply the tools of orthodox public finance, public choice, modern public economics, and game theory to reach a range of policy proposals and conclusions. These demonstrate the range and potential of economic analysis when applied to these important issues.

**Geocentrism:** The belief that Earth is literally motionless at the center of a universe which revolves around it. The European Convention on Human Rights guarantees freedom of education, including the opportunities to create and operate faith-based schools. However, as European societies become more religiously diverse and 'less religious' at the same time, the role of faith-based schools is increasingly being contested. Serious tensions have emerged between those who ardently support religious schools in their various forms, and those who oppose them. Given that faith-based schools enjoy basic constitutional guarantees in Europe, the controversy around them often surrounds

issues of public financing, degrees of organisational and pedagogical autonomy, and educational practices and management. This volume is about the controversies surrounding religious schools in a number of Western European countries. The introductory chapter briefly analyses the structural pressures that affect the position of religious schools, outlining the relevant institutional arrangements in countries such as Denmark, Germany, France, Ireland, the Netherlands, and Scotland. The following chapters provide a detailed analysis of the discussions and controversies surrounding faith-based schools in each country. Finally, the two concluding chapters aim to provide a bigger, comparative picture with regard to these debates about religious education in liberal democratic states and culturally pluralist societies. This book was originally published as a special issue of *Comparative Education*.

*The Essential Guide to Writing History Essays* is a step-by-step guide to the typical assignments of any undergraduate or master's-level history program in North America. Effective writing is a process of discovery, achieved through the continual act of making choices--what to include or exclude, how to order elements, and which style to choose--each according to the author's goals and the intended audience. The book integrates reading and specialized vocabulary with writing and revision and addresses the evolving nature of digital media while teaching the terms and logic of traditional sources and the reasons for citation as well as the styles. This approach to writing not only helps students produce an effective final product and build from writing simple,

Using debate to develop advanced competency in a second language is a method that is finding increased interest among instructors and students alike, whether in synchronous online teaching or the individual classroom. Through debate, students learn how to make hypotheses, support their conclusions with evidence, and deploy the rhetoric of persuasion in the target language. Though this method provides an exciting pedagogy for moving students from the advanced to the superior level, there is a paucity of materials available for instructors who wish to plan a curriculum focused on debate. *Teaching Advanced Language Skills through Global Debate: Theory and Practice* provides teachers with both the theoretical underpinnings for using debate in the foreign language classroom as well as practical advice for developing reading, listening, writing, and speaking skills through debate. It discusses task-based language learning and helps instructors design debate-related tasks for the classroom. *Teaching Advanced Language Skills through Global Debate* will be useful for any instructor working at the advanced level, and particularly for those training future language instructors. discusses informal thinking, the formal processes of induction, deduction, and syllogistic reasoning, in a clear format that makes it easy for the "beginning logician" to process. Students learn how to form a proposition, identify issues, gather evidence, and process an argument. To get started, logic games, puzzles, and real life examples ask students to consider how we evaluate, analyze, and decide. What happens if Janie says, 'Mom, can I go to the party? All of my friends are going!' And Mom responds, 'What if all of your friends jumped off the empire State building?' Is 'all of my friends are going' a good reason? Does mom have a point? Language and Logic will help students evaluate these everyday decisions. Then a more formal look at induction and deduction challenges students to practice higher-level thinking skills, such as using analogies for evaluation, and working through syllogisms to process ideas. After a review of the Greek Fallacies, readers can have some literary logic fun by analyzing old standards like 'Love is a Fallacy' and the persuasive love poem 'The Passionate Shepherd'"-- Provided by publisher.
