Popular Science gives our readers the information and tools to improve their technology and their world. The core belief that Popular Science and our readers share: The future is going to be better, and science and technology are the driving forces that will help make it better.

This book is the proceedings of the 2011 International Conference on Frontiers in Computer Education (ICFCE 2011) in Sanya, China, December 1-2, 2011. The contributions can be useful for researchers, software engineers, and programmers, all interested in promoting the computer and education development. Topics covered are computing and communication technology, network management, wireless networks, telecommunication, Signal and Image Processing, Machine Learning, educational management, educational psychology, educational system, education engineering, education technology and training. The emphasis is on methods and calculi for computer science and education technology development, verification and verification tools support, experiences from doing developments, and the associated theoretical problems.

Technical Drawing 101 covers topics ranging from the most basic, such as making freehand, multiview sketches of machine parts, to the advanced—creating an AutoCAD dimension style containing the style settings defined by the ASME Y14.5-2009 Dimensioning and Tolerancing standard. But unlike the massive technical drawing reference texts on the market, Technical Drawing 101 aims to present just the right mix of information and projects that can be reasonably covered by faculty, and assimilated by students, in one semester. Both mechanical and architectural projects are introduced to capture the interest of more students and to offer a broader appeal. The authors have also created extensive video training (120 videos, 15 hours total) that is included with every copy of the book. In these videos the authors start off by getting students comfortable with the user interface and demonstrating how to use many of AutoCAD's commands and features. The videos progress to more advanced topics where the authors walk students through completing several of the projects in the book. The CAD portion of the text incorporates drafting theory whenever possible and covers the basics of drawing setup (units, limits, and layers), the tools of the Draw, Modify, and Dimension toolbars, and the fundamentals of 3D modeling. By focusing on the fundamental building blocks of CAD, Technical Drawing 101 provides a solid foundation for students going on to learn advanced CAD concepts and techniques (paper space, viewports, xrefs, annotative scaling, etc.) in intermediate CAD courses. In recognition of the diverse career interests of our students, Technical Drawing 101 includes projects in which students create working drawings for a mechanical assembly as well as for an architectural project. We include architectural drawing because our experience has shown that many (if not most) first-semester drafting students are interested in careers in the architectural design field, and that a traditional technical drawing text, which focuses solely on mechanical drawing projects, holds little interest for these students. The multidisciplinary approach of this text and its supporting materials are intended to broaden the appeal of the curriculum and increase student interest and, it is hoped, future enrollments.

This handbook covers numerous types of common writing projects likely to be found in a career as an engineering student or a practicing engineer. Support is given in document-development efforts by a useful variety of tools to plan, develop, format and finalize engineering writing projects. Plenty of examples from engineering fields and disciplines are given, specializing the content to engineering students while still covering the basic mechanics of writing with a wide range of writing-related topics.

Leer om niet langer je eigen vijand te zijn en iedere minuut voluit te leven! Veel mensen kennen het gevoel tekort te schieten maar al te goed. Er is niet veel voor nodig horen hoe goed iemand anders is, zelf bekritiseerd worden, een woordenwisseling, een fout op het werk om te denken dat we niet goed genoeg zijn. Dit kan leiden tot zelfveroordeling, relatieproblemen, perfectionisme, eenzaamheid en overwerk. Zelfaanvaarding is een proces dat een leven lang duurt. In Het leven liefhebben door acceptatie beschrijft Tara Brach op een open en eerlijke manier hoe zij haar weg heeft gevonden. Via haar persoonlijke verhaal en dat van haar cliënten en leerlingen, geleide meditatie, gedichten en citaten weet zij tot de kern van het probleem door te dringen. Want pas als je begrijpt hoe het gevoel van onwaardigheid is ontstaan, kun je verbinding maken met je echte ik en jezelf leren vertrouwen en omarmen. Tara Brach is psychotherapeut en toonaangevend lerares op het gebied van mindfulness, emotionele genezing en spiritueel ontwaken. Zij is oprichter van de Insight Meditation Community en geeft zeer drukbezochte workshops in binnen- en buitenland. www.tarabrach.com

- Blends technical drawing and an introduction to AutoCAD 2022
- Covers both mechanical and architectural projects
- Twenty six hours of video instruction is included with each book
- Drafting theory is incorporated throughout the text
- Designed to be used in a single semester, instructor led course
- Each chapter contains key terms, unit summaries, review questions and drawing projects

De beste beslissingen ontstaan uit een goed afgestemde combinatie van verstand en gevoel. Hoe die mix er precies uitziet verschilt per situatie: voor een huis kiezen kan het best op je gevoel, omdat je de voors en tegens allang op een rijtje hebt gezet, maar aandelen kopen kan beter op ratio, want op de beurs laat je je vaak gevaarlijk meeslepen door emoties. Waar het om gaat is dat je weet wanneer je de verschillende delen van je hersenen moet gebruiken. Lehrer geeft ons de middelen die we hiervoor nodig hebben en maakt niet alleen gebruik van de allernieuwste onderzoeksresultaten, maar ook van de praktijkervaring van uiteenlopende besluitvormers, van piloten en investeerders tot pokeraars en seriemoordenaars. Hij beantwoordt twee vragen die voor iedereen van belang zijn, van ceo tot brandweerman: Hoe komen wij tot een besluit? En hoe kunnen we betere afwegingen maken? '
