As mass media burgeoned in the years between the first and second world wars, so did another phenomenon—celebrity. Beginning in Hollywood with the studio-orchestrated transformation of uncredited actors into brand-name stars, celebrity also spread to writers, whose personal appearances and private lives came to fascinate readers as much as their work. Women, Celebrity, and Literary Culture between the Wars profiles seven American, Canadian, and British women writers—Dorothy Parker, Anita Loos, Mae West, L. M. Montgomery, Margaret Kennedy, Stella Gibbons, and E. M. Delafield—who achieved literary celebrity in the 1920s and 1930s and whose work remains popular even today. Faye Hammill investigates how the fame and commercial success of these writers—as well as their gender—affected the literary reception of their work. She explores how women writers sought to fashion their own celebrity images through various kinds of public performance and how the media appropriated these writers for particular cultural discourses. She also reassesses the relationship between celebrity culture and literary culture, demonstrating how the commercial success of these writers caused literary elites to denigrate their writing as "middlebrow," despite the fact that their work often challenged middle-class ideals of marriage, home, and family and complicated class categories and lines of social discrimination. The first comparative study of North American and British literary celebrity, Women, Celebrity, and Literary Culture between the Wars offers a nuanced appreciation of the middlebrow in relation to modernism and popular culture.

Q: Do Gentlemen Really Prefer Blondes? A: Marilyn Monroe, Scarlet Johansson and Gwyneth Paltrow would be happy to know that they do. During the Ice Age, when even cavemen were in short supply, the blonde woman really did get her man - simply because her light coloured hair made her stand out. Plus scientists have recently discovered that natural blondes have higher oestrogen levels. In short, golden (preferably long) hair shouts : 'I am young, sexy - and fertile' to every member of the male species within a few miles. Q: When s the best time to seduce my man? A: Your other half will definitely get more possessive and more attracted to you when you re ovulating and at your most fertile. You ll spend time on your make-up and choose next day s outfit before you go to bed. Your lips will be fuller, and your skin will be radiant because of the high levels of oestrogen being pumped through your blood. But don t get carried away by how sexy you feel. You are also more likely to be unfaithful during this period and your boyfriend is also likely to run away with another equally fertile member of the female species. Q: How do I get him to change his wild lifestyle? A: Get pregnant. Shocking but true. Fathers have lower testosterone levels than single men which means that they are more easy-going and less confrontational, they take fewer life threatening risks, and they are far less likely to have an affair with the leggier, skinnier blonde from the office.

Let's be honest. You've tried the sticky-note inspirations, the motivational calendar, and the cute (but ineffective) "carpe diem" mug—yet your attitude hasn't changed. It's time to apply cutting-edge science to the challenges of daily life. While everyone desires self-improvement, we are quickly frustrated when trying to implement the contradictory philosophies of self-appointed self-help gurus. Too often, their advice is based on anecdote and personal opinion, not real research. Bestselling author of *What Makes Your Brain Happy and Why You Should Do the Opposite* David DiSalvo returns with *Brain Changer: How Harnessing Your Brain's Power to Adapt Can Change Your Life*. Drawing on the latest research in neuroscience, cognitive psychology, behavioral economics, communications, and even marketing, DiSalvo replaces self-help with "science help." He demonstrates how the brain's enormous capacity to adapt is the most crucial factor influencing how we feel and act—a factor that we can control to change our lives. Findings show our brains are fluid and function much like a feedback loop: stimulants from both our environment and from within ourselves catalyze changes in the brain's response. That response then elicits additional inputs that the brain identifies and analyzes to further tailor its response. DiSalvo shows that the greatest internal tool we have to affect the feedback loop is metacognition ("thinking about thinking"). Littered with relatable examples and tackling major aspects of our lives including relationships, careers, physical health, and personal development, *Brain Changer* shows you how to harness metacognition to enrich your life.

We trust our sciences to operate on a plane of objectivity and fact in a world of subjectivity and cultural ideologies, but should we? In *The Age of Scientific Sexism*, philosopher Mari Ruti offers a sharp critique of the gender profiling tendencies of evolutionary psychology, untangling the insidious threads of various gender mythologies that have infiltrated-or perhaps even define-this faux-science. Selling stereotypes as scientific facts, evolutionary psychology continually brings retrograde models of sexuality into mainstream culture: it insists that men and women live in two completely different psychological, emotional, and sexual universes, and that they will consequently always be locked in a vicious battle of the sexes. Among these regressive arguments is the assumption that men's sexuality is urgent and indiscriminate, whereas women are "naturally" reluctant, reticent, and choosy—a concept constructed to justify masculine behavior, such as cheating, that women have historically found painful. On its most basic level, *The Age of Scientific Sexism* explores our impulse to "explain" romantic behavior through science: in the increasingly egalitarian gender landscape of our society, why are we so eager to embrace the rampant gender profiling that evolutionary psychology promotes? Perhaps these simplistic gender caricatures owe their popularity, at least in part, to our overly pragmatic society pragmatic society, which encourages us to search for easy answers to complex questions.

Most critics claim that Edith Wharton's creative achievement peaked with her novels *The House of Mirth* and *The Age of Innocence*, dismissing her later fiction as reactionary, sensationalistic and aesthetically inferior. In *Edith Wharton's Brave New Politics*, Dale M. Bauer overturns these traditional conclusions. She shows that Wharton's post-World War I writings are acutely engaged with the cultural debates of her day - from reproductive control, to authoritarian politics, to mass culture and its ramifications.

Jena Pincott writes about the quirky, under-the-radar side of science and, while pregnant, found herself wondering how her baby's gestation might tinker with her body - and how her body was shaping the future development of her unborn child. She started to ask questions that her doctors couldn't always answer and uncovered unexpected answers in scientific journals. Why do thinner women have more daughters? What do foetuses actually learn when they eavesdrop? How does Grandma's diet affect her unborn grandchild? Drawing on her scientific background Jena Pincott writes about the hidden science of pregnancy. Here is a fascinating supplement to the typical maternity guide, delving into biology, neuroscience, evolutionary psychology and epigenetics, *Do Chocolate Lovers Have Sweeter Babies* gives a deeper understanding to what is physically, and psychologically, happening to a woman during pregnancy. Where does the maternal instinct come from? Does stress sharpen your baby's mind - or dull it? What mind control chemicals are in breast milk, sweat and tears? It will satisfy every pregnant woman's curiosity about life's most mysterious process through the newest, most interesting and, sometimes, controversial discoveries being made by science.

This book reveals a remarkable paradox: what your brain wants is frequently not what your brain needs. In fact, much of what makes our brains "happy" leads to errors, biases, and distortions, which make getting out of our own way extremely difficult. Author David DiSalvo presents evidence from evolutionary and social psychology, cognitive science, neurology, and even marketing and economics. And he interviews many of the top thinkers in psychology and neuroscience today. From this research-based platform, DiSalvo draws out insights that we can use to identify our brains' foibles and turn our awareness into edifying action. Ultimately, he argues, the research does not serve up ready-made answers, but provides us with actionable clues for overcoming the plight of our advanced brains and, consequently, living more fulfilled lives.

Cutting-edge, yet understandable science is used to illustrate things like the effect of women's menstrual cycles and the chemical and visual laws of attraction. Malone and Harris lay out what motivates the genders inside relationships, particularly men and their relationship with women and women and their relationship with food, in a way that encourages sexual empathy. *Battles of the Sexes* illuminates how couples can recognize chemical dangers to their bonds and gives singles valuable insights for dating, empowering loving, lasting, committed romance between men and women that will benefit not only individuals, but also our entire species.

An obscure independent filmmaker until *Halloween* (1978), John Carpenter has been applauded for his classic sense of compositions, yet reviled for his "B-film" sensibility. This second edition of the first book-length analysis finds in Carpenter's films a vision of a profound but unexpected order in the universe. The author analyzes Carpenter's early independent work, his made-for-television movies, his big Hollywood films (*The Fog*, *Escape from New York*, *The Thing*, *Stephen King's Christine*, *Starman*), his more recent independent work (*Big Trouble in Little China*, *Prince of Darkness*, *They Live*), and his contributions to films he did not direct. This edition fully updates the 1990 edition with attention to the films made since that date. With a chronology of Carpenter's career, a detailed filmography, photos, brief plot synopses, and a thorough index, this volume will be treasured by film scholars and fans alike.

Previously unpublished essays provide up-to-date, critical surveys of recent research and key debates. The contributors discuss early challenges posed by sociobiology, the rise of evolutionary psychology, the more conflicted response of evolutionary sociology to sociobiology, and evolutionary psychology. Chapters address the application and limitations of Darwinian ideas in the social sciences. Prominent authors come from a variety of disciplines in ecology, biology, primatology, psychology, sociology, and the humanities. The most comprehensive resource available, this vital collection demonstrates to scholars and students the new ways in which evolutionary approaches, ultimately derived from biology, are influencing the diverse social sciences and humanities.

us fairy folk since the invention of the camera; since we became inspiration in a can, to be bartered and traded by authors on the black market. "There should be more to it than that, but it turns out my ever after is only happy enough. I don't get out much, my job's only perk is all the free coffee in the world, and the charm has rubbed off my handsome and dashing prince. But I have a plan to turn things around. Tonight is our anniversary, me and the prince. Tonight, we have a date that's gonna rekindle the old flame. Tonight is going to be page 1 of our new life." 200 years ago, the invention of the camera allowed fairy folk to be trapped, packaged, and sold as bottled creativity. Folk quickly abandoned their magic castles and secret lairs for cities, hoping to blend into the mass of humanity without losing who they are, what makes them special. Today, relations between mortals and Folk have settled into a delicate detente of hide and seek, catch as catch can. Authors grow fat from Folk labor, and refuge becomes harder to find as technology nibbles at the edges of the world's mystery. It is a status quo that will end with the disappearance of dreams, when the last Folk vanishes in a flash. That is, until an accident between Beauty, an empty camera, and a too-pink hubcap margarita changes everything.

What if memory and learning could improve after eating certain foods—such as blueberries—high in plant chemicals called flavonols? What if primal ways of moving the body strengthen kids' working memory and mental flexibility? What if receiving the right types of touch translate into better emotional control and self-regulation? These and many more questions led Pincott to simple, all-natural "biohacks"—or experiments inspired by current research and theory—complete with instructions on how to undertake them to help your own children strengthen their wits, guts, and grit.

Testosterone makes us stronger, happier, and smarter. It also makes us meaner, more violent and more selfish. A scientific look into the vast and unexpected influence testosterone has on our behavior, our society, and our bodies. The brain of every man—and every woman—is shaped by this tiny molecule from before birth: it propels our drive for exploration and risk, for competition and creation, and even our survival. The effects of testosterone permeate the traditions, philosophy, and literature of every known culture—without it, the world would be a drastically different place. Testosterone also has a role in humanity's darker side, contributing to violence, hubris, poverty, crime, and selfishness. Recent revelations of the science of testosterone show that high levels will deplete compassion and generosity, and even reduce the affection we show our children. In *The Virility Paradox*, internationally renowned oncologist and prostate cancer researcher Charles Ryan explores this complex chemical system responsible for a diverse spectrum of human behaviors and health in both men and women. Ryan taps his vast experience treating prostate cancer with testosterone-lowering therapy, observing that this often leads to profound changes in the patients' perspectives on their lives and relationships. Often, for the better. Ryan uses the journeys of these patients and others to illustrate the vast and sometimes unexpected influence testosterone has on human lives. Through the stories of real men and women, he also explores the connections between testosterone and conditions like dementia, autism, and cancer, as well as the biological underpinnings of sexual assault and the effects it has on everything from crime to investing to everyday choices we make. Integrating the molecular and the medical, sociology and storytelling, *The Virility Paradox* offers a fascinating look at how one

A SUNDAY TIMES BOOK OF THE YEAR Human civilization is on the verge of spreading beyond Earth. More than a possibility, it is becoming a necessity: whether our hand is forced by climate change and resource depletion or whether future catastrophes compel us to abandon Earth, one day we will make our homes among the stars. World-renowned physicist and futurist Michio Kaku explores in rich, accessible detail how humanity might gradually develop a sustainable civilization in outer space. With his trademark storytelling verve, Kaku shows us how science fiction is becoming reality: mind-boggling developments in robotics, nanotechnology, and biotechnology could enable us to build habitable cities on Mars; nearby stars might be reached by microscopic spaceships sailing through space on laser beams; and technology might one day allow us to transcend our physical bodies entirely. With irrepressible enthusiasm and wonder, Dr. Kaku takes readers on a fascinating journey to a future in which humanity could finally fulfil its long-awaited destiny among the stars - and perhaps even achieve immortality.
