"Smart, scathing, and verbally inventive to an astonishing degree, David J. Schow is one of the most interesting writers of his generation."—Peter Straub "Inter-what?" When advertising executive Conrad Maddox returns from a redeye flight and finds a mysterious locker key waiting in his rental car, he discovers a briefcase loaded with guns and money. Several hours later, his entire life tumbles down a rabbit hole when he meets Dandine, owner of the case and former contract assassin for a shadowy organization called Norco, which is now out to nail both of them. "Internecine" means conflict, mutual destruction, and slaughter—or, as Dandine tells Conrad, they are now inadvertently at play in a field of "terrorism, counter-assassination, military coups, dirty tricks, Watergate, spy vs. spy, murky secret organizations, that sort of thing." A world in which being innocent can't save you, the police can't help you, and your only hope of getting out alive is to risk unheard-of dangers against opponents with nearly unlimited power. To free themselves from the spider web of black ops, murder, madness and betrayal, Dandine and Conrad must delve ever-deeper into the spiraling, dangerous maze that is Norco, where everyone seems to be in on the most lethal of games...except you.

Twelve-year-old twins, Leon and DeeAnn, and their little brother, Caleb, are devastated by the mysterious disappearance of their beloved great-uncle Azer. The grieving siblings are determined to be content with cherishing his left-behind mementos. But one evening, those items summon an antique express train into Union Station, Washington DC. The kids' decision to board strands them on a farm near West Chester, Pennsylvania, where they're thrust into the secret Underground Railroad system transporting escaping in 1854. Removed from the twenty-first century into a time without electricity, antibiotics, and cars, they struggle to adjust. Fitting in and hiding their time-travel secret, however, are not their most difficult tasks. They must drive a wagon with a false bottom to trick the slave catchers and run at midnight on dark streets in search of a doctor. Even worse, DeeAnn must walk in broad daylight on a road with escaping slaves. Through it all, they're determined to work against nineteenth-century racial prejudice. The kids' worst fears materialize when the Time Line Express is not available for return to their own century in Alexandria, Virginia. Will they spend the rest of their lives stuck in a difficult and dangerous era, never to see their parents and friends again?

In the year 2035, robots, artificial intelligences, and neural implants have become commonplace. The Institute for Ethics keeps the peace, using social reputation to ensure that robots and humans don't harm society or each other. But a powerful AI named Adam has found a way around the restrictions. Catherine Matthews, nineteen years old, has a unique gift: the ability to manipulate the net with her neural implant. Yanked out of her perfectly ordinary life, Catherine becomes the last firewall standing between Adam and his quest for world domination. The volume aims at providing a comprehensive review of the diverse efforts covering the gap existing between the two main perspectives on the topic of ontologies for multi-agent systems, namely: How ontologies should be modelled and represented in order to be effectively used in agent systems, and on the other hand, what kind of capabilities should be exhibited by an agent in order to make use of ontological knowledge and to perform efficient reasoning with it. The volume collects the most significant papers of the AAMAS 2002 and AAMAS 2003 workshop on ontologies for agent systems, and the EKAW 2002 workshop on ontologies for multi-agent systems.
