During a time of accelerating momentum for radical change in the study of economics, 'A Guide to What's Wrong with Economics' comprehensively re-examines the shortcomings of neoclassical economics and considers a number of alternative formulations.

This insightful Modern Guide offers a broad coverage of questions and controversies encountered by contemporary economists. A refreshing approach to philosophy of economics, chapters comprise a range of methodological and theoretical perspectives, from lab and field experiments to macroeconomics and applied policy work, written using a familiar, accessible language for economists.

Without economic history, economics runs the risk of being too abstract or parochial, of failing to notice precedents, trends and cycles, of overlooking the long-run and thus misunderstanding 'how we got here'. Recent financial and economic crises illustrate spectacularly how the economics profession has not learnt from its past. This important and unique book addresses this problem by demonstrating the power of historical thinking in economic research. Concise chapters guide economics lecturers and their students through the field of economic history, demonstrating the use of historical thinking in economic research, and advising them on how they can actively engage with economic history in their teaching and learning. Blum and Colvin bring together important voices in the field to show readers how they can use their existing economics training to explore different facets of economic history. Each chapter introduces a question or topic, historical context or research method and explores how they can be used in economics scholarship and pedagogy. In a century characterised to date by economic

It has been written to make international economics accessible to both students and professionals. Assuming a minimal background in economics and mathematics, the textbook goes beyond the usual trade-finance dichotomy to address international trade, international production, and international finance; and takes a practitioner point of view rather than a standard academic one, introducing students to the material needed to become effective analysts in international economic policy. This new edition features such additional topics as global production and global capital flows, migration, the Ricardian model, and international organizations like the IMF. Examples have been updated to include recent developments (Brexit, for example) and all charts include the latest data. The website for the text can be found at <http://iie.gmu.edu>.

The Changing Face of Economics gives the reader a sense of the modern economics profession and how it is changing. The volume does so with a set of nine interviews with cutting edge economists, followed by interviews with two Nobel Prize winners, Paul Samuelson and Kenneth Arrow, reflecting on the changes that are occurring. What results is a clear picture of today's economics--and it is no longer standard neoclassical economics. The interviews and commentary together demonstrate that economics is currently undergoing a fundamental shift in method and is moving away from traditional neoclassical economics into a dynamic set of new methods and approaches. These new approaches include work in behavioral economics, experimental economics, evolutionary game theory and ecological approaches, complexity and nonlinear dynamics, methodological analysis, and agent-based modeling. David E. Colander is Professor of Economics, Middlebury College. J. Barkley Rosser, Jr., is Professor of Economics and Kirby L. Kramer Jr. Professor of Business Administration, James Madison University. Richard P. F. Holt is Professor of Churchill Honors and Economics, Southern Oregon University.

Fully updated, this edition offers a unique, integrated approach to the economics and financing of entertainment and media sectors.

The authors provide a narrative treatment of the more formal concepts of Information Economics, using easy to understand and lively illustrations from film and literature and nutshell examples. The book first covers the economics of information in a 'man versus nature' context, explaining basic concepts like rational updating or the value of information. Then in a 'man versus man' setting, Birchler and Butler describe strategic issues in the use of information: the make-buy-or-copy decision, the working and failure of markets and the important role of outguessing each other in a macroeconomic context. It closes with a 'man versus himself' perspective, focusing on information management within the individual. This book also comes with a supporting website ([www.alicebob.info](http://www.alicebob.info)), maintained by the authors.

The conditions for sustainable growth and development are among the most debated topics in economics, and the consensus is that institutions matter greatly in explaining why some economies are more successful than others over time. Probing the long-term effects of early colonial differences on immigration policy, land distribution, and financial development in a variety of settings, *Understanding Long-Run Economic Growth* explores the relationship between economic conditions, growth, and inequality, with a focus on how the monopolization of resources by the political elite limits incentives for ordinary people to invest in human capital or technological discovery. Among the topics discussed are the development of credit markets in France, the evolution of transportation companies in the United Kingdom and the United States, and the organization of innovation in the United States.

Het nieuwe boek van bestsellerauteur Ha-Joon Chang is een bijzonder onderhoudende en toegankelijke introductie in de wereld van de economie. Wat is economie? Wat doen economen? Waarom zijn economen zulke slechte voorspellers? Chang biedt niet alleen de handvatten voor een beter begrip van de financiële wereld, maar geeft ook zijn visie op wat de economie voor iedereen kan betekenen, en dus niet alleen voor superrijken. Economie is onontbeerlijk voor het begrijpen van de krachten die bepalen hoe mensen, naties en economische systemen functioneren. En het laat helder zien hoe we de huidige economische rampspoed moeten begrijpen, en wat we eraan kunnen doen.

Kritische analyse van vrijemarktdenken Er zijn misschien wat nadelen aan verbonden, maar er is eigenlijk geen alternatief voor de vrijemarkteconomie. We worden er toch ook allemaal beter van? Fout. Ha-Joon Chang, een van de meest gerespecteerde economen ter wereld, maakt in dit boek korte metten met de grootste mythes over de economie in het algemeen en het vrijemarktdenken in het bijzonder. Niet iedereen wordt rijker van marktwerking, duurbetaalde managers leveren niet per se betere prestaties en we leven niet in een postindustriële economie. Chang weet elk idee dat wij over economie hebben op zijn kop te zetten. 23 dingen die ze je niet vertellen over het kapitalisme, boordevol informatie over geld, gelijkheid, vrijheid en hebzucht, laat zien dat de vrije markt veel verliezers kent en vaak leidt tot een inefficiënte manier van economie bedrijven. In dit prikkelende boek legt de auteur, die in de traditie staat van John Kenneth Galbraith and Joseph Stiglitz, uit hoe de economie echt werkt en waarom verstandig overheidsbeleid meestal tot betere resultaten leidt dan pure marktwerking. This text offers a rethinking of the field of international political economy in an era of

Even as global integration advances, states play central roles as partners with the largest of global firms, as the catalysts of competitiveness and economic growth, as the creators of global institutions, and in promoting and responding to global interdependence. At the same time, new issues and actors complicate the global agenda as it expands to address the environment, global health, and food security.
