On February 24, 1989, United Airlines flight 811, a Boeing 747-122, lost a cargo door as it was climbing between 22,000 and 23,000 feet after taking off from Honolulu, Hawaii, en route to Sydney, Australia with 355 persons aboard. As a result of the incident nine of the passengers were ejected from the airplane and lost at sea. The cargo door was recovered in two pieces from the ocean floor at a depth of 14,200 feet on September 26 and October 1, 1990. The probable cause of this accident was a faulty switch or wiring in the door control system. Contributing to the cause of the accident was a deficiency in the design of the cargo door locking mechanisms. Also contributing to the accident was a lack of timely corrective actions by Boeing and the FAA following a 1987 cargo door opening incident on a Pan Am B-747. A complete reference that features a wealth of proven maintenance methods that can reduce

The Construction (Design and Management) Regulations 2007 repeal the CDM Regulations 1994 and the Construction (Health, Safety and Welfare) Regulations 1996; containing all the legal duties regarding the design and management of a construction project and the safe operating standards expected on a construction site. CDM 2007: Questions and Answers by Pat Perry is a pragmatic, common-sense approach to interpreting the many queries which will inevitably arise from the new Regulations, no matter how simplified they purport to be. The author details practical solutions to a wide range of legal compliance issues and explores answers which go beyond the rather limited information contained in the Approved Code of Practice which supports the Regulations. The various duty holders, project stages and safety issues are dealt with in different chapters and the book can be used for detailed reference or for a quick refresher on specific subjects.
