Crisis is varied and unavoidable. We see crisis every day within organizations, governments, businesses and the economy. A true crisis differs from a 'routine' emergency, such as a water pipe bursting in the kitchen. Per one definition, "it is associated with urgent, high-stakes challenges in which the outcomes can vary widely (and are very negative at one end of the spectrum) and will depend on the actions taken by those involved". Successfully engaging, dealing with, and working through a crisis requires an understanding of options and tools for individual and joint decision making. The Encyclopedia of Crisis Management comprehensively overviews concepts and techniques for effectively assessing, analyzing, managing, and resolving crises, whether they be organizational, business, community, or political. From general theories and concepts exploring the meaning and causes of crisis to practical strategies and techniques relevant

to crises of specific types, crisis management is thoroughly explored.

Treating nuclear, biological, and chemical agent exposures presents a unique set of challenges. These scenarios usually involve multiple exposures, sometimes even mass exposures, from a single, often poorly-defined, event. Early symptoms are not distinct and can often be variable. Laboratory analyses may be required from environmental, often nonbiological, specimens. Scene evaluation and pre-hospital decontamination may turn out to be the most important intervention. Hospital resource utilization must be a consideration. Even the pathologist performing autopsies needs adequate preparation. It is with these considerations in mind that the Handbook of Nuclear, Biological, and Chemical Agent Exposures was created. Taking a concise yet comprehensive, clinical approach to the treatment of these exposures, the authors provide concise information on radiation substances, biological agents, chemical toxins, laboratory tests, and antidotes. The book includes essays on topics such as Field Identification and Decontamination of Toxins, Bioterrorism and the Skin, and Mass Exposures Involving the Pediatric Population. A quick review of the contents will tell you that this book contains the tools you need when facing the formidable tasks of diagnosing and treating nuclear, biological, and chemical agent exposures.

U.S. Government Counterterrorism: A Guide to Who Does What is the first readily available, unclassified guide to the many U.S. government agencies, bureau offices, and programs involved in all aspects of countering terrorism domestically and overseas. The authors, veterans of the U.S. government's counterterrorism efforts, present a rare

insider's view of the counterterrorism effort, addressing such topics as government training initiatives, weapons of mass destruction, interagency coordination, research and development, and the congressional role in policy and budget issues. Includes a Foreword by Brian Michael Jenkins, Senior Advisor RAND Corporation Individual chapters describe the various agencies, their bureaus, and offices that develop and implement the counterterrorism policies and programs, providing a useful unclassified guide to government officials at all levels as well as students and others interested in how the U.S. counters terrorism. The book also discusses the challenges involved in coordinating the counterterrorism efforts at federal, state, and local levels and explains how key terror events influenced the development of programs, agencies, and counterterrorism legislation. The legislative underpinnings and tools of the U.S. counterterrorism efforts are covered as are the oft-debated issues of defining terrorism itself and efforts to counter violent extremism. In addition to outlining the specific agencies and programs, the authors provide unique insights into the broader context of counterterrorism efforts and developments in the last 10-plus years since 9/11 and they raise future considerations given recent landscape-altering global events. The authors were interviewed by National Defense Magazine in a January 23, 2012 article entitled Counterterrorism 101: Navigating the Bureaucratic Maze. They were interviewed on April 30, 2012 by Federal News Radio. Michael Kraft was also interviewed on June 27, 2014 by Federal News Radio.

In 1998, the Department of Defense (DoD) began a program of mandatory immunization against anthrax for all military personnel. As the program proceeded, however, some military personnel and their families raised concerns about the safety and efficacy of the anthrax vaccine. Acknowledging both the need to protect military personnel and the concerns about the anthrax vaccine, congress directed the Centers for Disease Control and Prevention (CDC) to carry out a research program on its safety and efficacy. To assist in the development of this program, CDC requested the Institute of Medicine (IOM) to convene a committee to review the completeness and appropriateness of the research program. In An Assessment of the CDC Anthrax Vaccine Safety and Efficacy Research Program, the committee makes an overall assessment of the CDD research plan and reviews the specific studies proposed by CDC in the three areas of efficacy, safety and acceptability. The committee also notes additional research needs that became evident following the bioterrorist events of 2001 and makes recommendations about the leadership of the research program.

Cities and regions around the world increasingly capitalize on a series of events aimed at optimizing their reach and outcomes. How then can a series of different events be developed and harnessed? What are the conditions and the means by which synergies and collaboration among different events and their stakeholders can be fostered? This book for the first time explores how managers and host communities can synergize sport, cultural and other planned events in a portfolio in order to attain, magnify and sustain their outcomes. The incorporation of different events into a portfolio requires an integrative way of viewing the different community purposes that they serve in unison. This book elaborates on this holistic approach by developing an integrative theoretical framework for conceptualizing event portfolios, and examining their challenges and prospects as well as potential as tools for sustainable development. It therefore presents the foundations of event portfolio planning, the patterns of inter-organizational relationships within collaborative events networks that foster the conditions for community capacity-building and the requirements for the design and development of event portfolios. Topics are considered from varying perspectives and examples of emerging event portfolios from a range of geographical regions are integrated throughout. Uniquely providing a holistic framework for planning and managing a series of events this is essential reading for all those interested in Events Policy, Planning and Management.
