Interest in sexuality and reproductive function does not cease when people begin to age. Instead, a new set of questions arises. Women want to know if it is safe to have babies in their late thirties and early forties. They want to know more about hot flashes and other symptoms of menopause-which ones are dangerous and which are merely uncomfortable. They are eager to learn about the relative risks and benefits of estrogen replacement therapy. Men, too, are concerned about age-related changes in their sexual function. Experts in reproductive physiology, gerontology, and genetics met at the National Institutes of Health in June of 1984 to discuss these and other concerns about aging and the reproductive system. The conference on Aging, Reproduction, and the Climacteric was sponsored by the American Fertility Society, The National Institute on Aging, and the National Institute of Child Health and Human Development. This volume is based on the proceedings of that conference.

Over 7,500 terms, definitions, and acronyms for medical insurance, billing and coding (MIBC) make this the perfect pocket dictionary for both students and practitioners in the MIBC professions! With its small size and concise definitions, this dictionary is ideal for use in class and in the medical office. Practical, consistent alphabetical organization with no subentries and screened thumb tabs make it easy to find the information you need. Etymologies for most entries help you understand the origins of the terminology and build your professional vocabulary. A list of commonly used abbreviations printed in the front and back covers make this your go-to reference for everyday practice.

Covering both trade and international finance, this innovative text provides a thoroughly up-to-date and comprehensive treatment of each area. Throughout, the theory is illustrated with empirical evidence and an abundance of relevant case studies. It includes an online study guide.

Comprehensive and authoritative, this book, written by a recognized authority on the subject explores the contributions to modern economics by John Maynard Keynes and addresses neglected, yet crucial aspects of the genesis of Keynesian economics. In this book, the author elucidates Keynes' development as an economic theoretician through an examination of his books, articles, various manuscripts, lecture notes and controversial correspondence. Departing from a narrative account and analyzing processes of theory-building and re-building which constitute Keynes's intellectual journey from the Tract to the General Theory, this volume shows Keynes' theoretical development as a theoretical hypothesis. An excellent exposition of Keynes' contribution, this is a valuable addition to the bookshelves of all to students and researchers interested in Keynes and more widely the history of economic thought and macroeconomics.

This unique and timely volume provides a comprehensive overview of the most recent clinical work and research on the topic. Following an overview of the disorder, the first section of the book deals with young children, providing a detailed analysis of gender identity disorder in both boys and girls. The second section, which focuses on adolescents, covers gender identity disorder, transvestic fetishism - also based on the largest sample of individuals ever studied - and homosexuality. Detailed clinical case material, which brings the issues to life, is included throughout.

First multi-year cumulation covers six years: 1965-70.

The emotional pressures on cancer patients and their families are increasing and traditional supports are decreasing. This book attempts to provide a readable, authoritative and balanced review of the emotional pressures and coping methods of cancer patients, and the help currently available to them. The special problems of children and terminal patients with cancer, and the role of the family in coping, are also examined. A balanced and critical assessment is made of defects in health organisation, training of personnel and attitudes to cancer patients in Western society. A similar assessment is made of the growing tendency to self help, mutual help and group activities for such patients. While each individual needs to select coping aids best suited to his or her own temperament, medical advisors need to make more time available for discussion of technical, emotional, social and sexual problems. The availability of a cancer-treating "team" makes this feasible. Chapters were invited from physicians, psychiatrists, psychologists and sociologists expert in this field, and they have responded to the challenge of writing in non-technical language. This is so that readership can cross disciplinary boundaries and thus stimulate physicians, nurses, psychologists, sociologists, clergy and others, to satisfy some of the currently unmet needs of cancer patients. The reader may note a small amount of overlap between some chapters, permitted in order to maintain continuity and make each chapter complete in itself.

In May of 1919, women from around the world gathered in Zurich, Switzerland, and proclaimed, "We dedicate ourselves to peace!" Just months after the end of World War I, the Womens International League for Peace and Freedom--a group led by American progressive Jane Addams and comprising veteran campaigners for social reform--knew that a peaceful world was essential to their ongoing quest for social and economic justice. Alan Dawley tells the story of American progressives during the decade spanning World War I and its aftermath. He shows how they laid the foundation for progressive internationalism in their efforts to improve the world both at home and abroad. Unlike other accounts of the progressive movement--and of American politics in general--this book fuses social and international history. Dawley shows how interventions in Latin America and Europe affected domestic plans for social reform and civic engagement, and he depicts internal battles among progressives between unabashed imperialists like Theodore Roosevelt and their implacable opponents like Robert La Follette. He draws a contrast between Woodrow Wilson's use of force in exporting

American ideals and Addams's more cosmopolitan pursuit of economic justice and world peace. In discussing the debate over the League of Nations within the context of turbulent domestic affairs, Dawley brings keen insight into that complicated moment in American history. In striking and original ways, Dawley brings together domestic and world affairs to argue that American progressivism cannot be understood apart from its international context. Focusing on world-historical events of empire, revolution, war, and peace, he shows how American reformers invented a new politics built around progressive internationalism. *Changing the World* retrieves the progressive tradition in American politics and makes it available to contemporary debates. The book speaks to anyone seeking to be both a good citizen within the nation and a good citizen of today's troubled world.

A fascinating new angle on presidential history, assessing the performances of the presidents in their freshman year of the toughest job in the world. Grouped by the issues the new presidents confronted in their first years in office, the book takes readers into the history, thought processes, and results on a case-by-case basis, including how the presidents' subsequent actions proved that they learned (or didn't learn) from their mistakes. From George Washington to Barack Obama, *The President's First Year* details the challenging first twelve months of all our presidents' tenures.

Examining cycling from a range of geographical perspectives, this book uses historical and contemporary case studies to look at the history, politics, economy and culture of cycling. Pursuing a post-structural position in viewing understandings of the bicycle as contingent upon time and place, author Glen Norcliffe argues for the need for widespread processes such as gendered use of the bicycle, the Cyclists' Rights Movement, and the globalization of bicycle-making to be interpreted in different ways in different settings. With this in mind, the essays in the book are divided into two sections: relational aspects are examined as Spaces of Cycling which treats technological development, innovation, and the location of production and trade of cycles, while Places of Cycling interprets specific sites of consumption - the streets of the city, in the cycling clubs, among men and women, and at the trade show. Written from a geographer's integrative perspective to offer a broad understanding of cycling, this book will also be of interest to other social scientists in urban studies, cultural studies, technology and society, sociology, history and environmental planning.

Striking out from Knoxville, Tennessee in late March of 1865, Major General George Stoneman unleashed his cavalry division upon Southern Appalachia intent on "leaving nothing for the Rebellion to stand upon." The raiders wreaked havoc on government stores, civilian property and indispensable infrastructure, dashing all hope for the dying Confederacy's stand on the rugged peaks of the Blue Ridge. They eventually trampled through five southern states, reduced to ashes one of the last major prisons in the south and helped pursue the renegade president. But much more than wanton destruction, their story is one of hardship, redemption and retribution. Taking into account the local folklore of the Raid, this volume traces the column's course as it departed Tennessee, penetrated Southwestern Virginia and stormed the North Carolina Piedmont.
