If you're serious about streaming and managing your music and movies collection, then a Home Theatre PC (HTPC) puts you firmly in control. Sure, you can stream media on Connected TVs, Blu-ray players and other receivers but you have limited opportunities to customise and tailor those offerings to your needs, your family's needs and the needs of your home. Depending on your choice, you get these services, miss out on those services and are reliant on a benevolent manufacturer to continue adding new apps and maintaining existing apps. But a HTPC with a small footprint - powerful and silent hardware running slick, easy to manage media center software is not a dream. It's available for you today. Right now. You can build the hardware you want, install the services you prefer and play the media you love. In this 513 page guide, we walk you step by through creating a first-class, small and mighty HTPC - you'll plan the specifications, components and form factor you need, select the hardware and learn how to assemble a barebones kit (such as our reference build, an Intel NUC HTPC) or build a PC from scratch. From there, we deep dive into maximising performance of your HTPC through tweaking motherboard settings and installing Intel's Rapid Start and Smart Connect management applications. We'll install the latest release of Windows and configure the
