With bracing clarity, James Elkins explores why images are taken to be more intricate and hard to describe in the twentieth century than they had been in any previous century. *Why Are Our Pictures Puzzles?* uses three models to understand the kinds of complex meaning that pictures are thought to possess: the affinity between the meanings of paintings and jigsaw-puzzles; the contemporary interest in ambiguity and 'levels of meaning'; and the penchant many have to interpret pictures by finding images hidden within them. Elkins explores a wide variety of examples, from the figures hidden in Renaissance paintings to Salvador Dali's paranoiac meditations on Millet's *Angelus*, from Persian miniature paintings to jigsaw-puzzles. He also examines some of the most vexed works in history, including Watteau's "meaningless" paintings, Michelangelo's Sistine Ceiling, and Leonardo's *Last Supper*.

This book is an examination of the music of the Balinese gendér wayang, the quartet of metallophones - gendér - that accompanies the Balinese shadow puppet play - wayang kulit. The book focuses on processes of musical variation, the main means of creating new music in this genre, and the implications of these processes for the social and historical study of Balinese music, musical aesthetics, concepts of creativity and compositional methods. Dr Nick Gray tackles a number of core ethnomusicological concerns in a new way, including the relationship between composition and improvisation, and also highlights issues specific to Balinese music, including the importance of flexibility in performance, an aspect that has been largely ignored by scholars. Gray thus breaks new ground both in the study of issues relating to improvisation and composition and in Balinese music studies.

PRAISE FOR PREVIOUS EDITIONS "This is a brilliantly clear introduction (and indeed reframing) of the history and philosophy of science in terms of worldviews and their elements.... In addition, the book is incredibly well-informed from both a scientific and philosophical angle. Highly recommended." Scientific and Medical Network "Unlike many other introductions to philosophy of science, DeWitt's book is at once historically informative and philosophically thorough and rigorous. Chapter notes, suggested readings, and references enhance its value." Choice "Written in clear and comprehensible prose and supplemented by effective diagrams and examples, Worldviews is an ideal text for anyone new to the history and philosophy of science. As the reader will come to find out, DeWitt is a gifted writer with the unique ability to break down complex and technical concepts into digestible parts, making Worldviews a welcoming and not overwhelming book for the introductory reader." History and Philosophy of the Life Sciences, vol. 28(2) Now in its third edition, *Worldviews: An Introduction to the History and Philosophy of Science* strengthens its reputation as the most accessible and teachable introduction to the history and philosophy of science on the market. Geared toward engaging undergraduates and those approaching the history and philosophy of science for the first time, this intellectually-provocative volume takes advantage of its author's extensive teaching experience, parsing complex ideas using straightforward and sensible examples drawn from the physical sciences. Building on the foundations which earned the book its critical acclaim, author Richard DeWitt considers fundamental issues in the philosophy of science through the historical worldviews that influenced them, charting the evolution of Western science through the rise and fall of dominant systems of thought. Chapters have been updated to include discussion of recent findings in quantum theory, general relativity, and evolutionary theory, and two new chapters exclusive to the third edition enrich its engagement with radical developments in contemporary science. At a time in modern history when the nature of truth, fact, and reality seem increasingly controversial, the third edition of *Worldviews* presents complex concepts with clarity and verve, and prepares inquisitive minds to engage critically with some of the most exciting questions in the philosophy of

science.

"Bridges to the Ancestors effectively reveals the Lingsar festival as a site of cultural struggle as Harnish explores how history, identity, and power are constructed and negotiated. He addresses the fascinating interaction between music and myth and the forces of modernity, globalization, authenticity, tourism, religion, regionalism, and nationalism in maintaining "tradition."--Jacket.

Growing out of the collaborative research of an American ethnomusicologist and Zimbabwean musician, Paul F. Berliner's *The Art of Mbira* documents the repertory for a keyboard instrument known generally as mbira. At the heart of this work lies the analysis of the improvisatory processes that propel mbira music's magnificent creativity. In this book, Berliner provides insight into the communities of study, performance, and worship that surround mbira. He chronicles how master player Cosmas Magaya and his associates have developed their repertory and practices over more than four decades, shaped by musical interaction, social and political dynamics in Zimbabwe, and the global economy of the music industry. At once a detailed exposition of the music's forms and practices, it is also an indispensable historical and cultural guide to mbira in a changing world. Together with Berliner and Magaya's compendium of mbira compositions, *Mbira's Restless Dance*, *The Art of Mbira* breaks new ground in the depth and specificity of its exploration of an African musical tradition, and in the entwining of the authors' collaborative voices. It is a testament to the powerful relationship between music and social life--and the rewards of lifelong musical study, performance, and friendship.

This contributed volume is the result of a July 2010 workshop at the University of Wuppertal Interdisciplinary Centre for Science and Technology Studies which brought together world-wide experts from physics, philosophy and history, in order to address a set of questions first posed in the 1950s: How do we compare spacetime theories? How do we judge, objectively, which is the "best" theory? Is there even a unique answer to this question? The goal of the workshop, and of this book, is to contribute to the development of a meta-theory of spacetime theories. Such a meta-theory would reveal insights about specific spacetime theories by distilling their essential similarities and differences, deliver a framework for a class of theories that could be helpful as a blueprint to build other meta-theories, and provide a higher level viewpoint for judging which theory most accurately describes nature. But rather than drawing a map in broad strokes, the focus is on particularly rich regions in the "space of spacetime theories." This work will be of interest to physicists, as well as philosophers and historians of

science working with or interested in General Relativity and/or Space, Time and Gravitation more generally.

Born to a loving and educated New England family, Rachel Page Elliott, known to all as Pagey, was encouraged to develop her interests and talents wherever they would lead her. And lead her they did, to a life-long fascination with animals, first to horses, then to dogs. Each passion created adventures and opportunities that make her life story so fascinating. With a growing family and a farm in the country, Pagey bred and competed in a wide range of dog sports with her "Featherquest" Golden Retrievers. Her interests led her to the scientific study of canine structure and movement and ground-shaking research that changed, and is still changing, widely-held beliefs about how dogs move. Curl up with this reminiscence of the life of a woman ahead of her time in her independence and passionate study of her interests and be inspired to follow your own instincts to live life more fully!

This book is about the gender dimensions of natural resource exploitation and management, with a focus on Asia. It explores the uneasy negotiations between theory, policy and practice that are often evident within the realm of gender, environment and natural resource management, especially where gender is understood as a political, negotiated and contested element of social relationships. It offers a critical feminist perspective on gender relations and natural resource management in the context of contemporary policy concerns: decentralized governance, the elimination of poverty and the mainstreaming of gender. Through a combination of strong conceptual argument and empirical material from a variety of political economic and ecological contexts (including Cambodia, China, Indonesia, Malaysia, Nepal, Thailand and Vietnam), the book examines gender-environment linkages within shifting configurations of resource access and control. The book will serve as a core resource for students of gender studies and natural resource management, and as supplementary reading for a wide range of disciplines including geography, environmental studies, sociology and development. It also provides a stimulating collection of ideas for professionals looking to incorporate gender issues within their practice in sustainable development. Published with IDRC."
