The World Trade Organization (WTO) Agreement covers international commerce in goods and services including measures that directly affect trade, such as import tariffs and quotas, and almost any type of internal measure with an impact on trade. Legal and Economic Principles of World Trade Law contributes to the analysis of the texts of World Trade Law in law and economics, reporting work done to identify improvements to the interpretation of the Agreement. It starts with background studies, the first summarizes The Genesis of the GATT, which highlights the negotiating history of the GATT 1947–8; the second introduces the economics of trade agreements. These are followed by two main studies. The first, authored by Bagwell, Staiger and Sykes, discusses legal and economic aspects of the GATT regulation of border policy instruments, such as import tariffs and import quotas. The second, written by Grossman, Horn and Mavroidis, focuses on the core provision for the regulation of domestic policy instruments - the National Treatment principles in Art. III GATT.

Designed specifically for students, and responding to current market feedback, Routledge Student Statutes offer a comprehensive collection of statutory provisions un-annotated and therefore ideal for LLB and GDL course and exam use. In addition, an accompanying website offers extensive guidance on how to use and interpret statutes, providing valuable tutorial and exam preparation.

The Dictionary of International Trade Law book was the first of its kind and remains the indispensable reference that students, scholars, and practitioners around the world frequently consult. This Dictionary defines and explains in detail hundreds of terms -- common and uncommon ones -- used in the field, from the "ACU" and "CMAA" to "TIFA" and the "WCO.". Many entries include organizational charts (e.g., the structure of the new Department of Homeland Security) and tables (e.g., of precedent-setting cases on zeroing). Many entries also provide references for further research. Notably, the Dictionary has two Annexes: • Annex A has data on U.S. FTAs, including votes by political party in Congress, on immediate versus deferred duty-free treatment for goods, market access for services, and government procurement thresholds. It also boasts a Note on TPP, which is rich in breadth and depth. • Annex B sets out research tools, such as tables on milestones in Chinese history (from early dynasties through modern legal reforms), EU institutions, and U.S. trade statutes. Like the globally acclaimed book, International Trade Law: An Interdisciplinary, Non-Western Textbook, the Dictionary enjoys both legal and non-legal audiences. That is because the Dictionary pays special attention to practical terms and theoretical concepts from international economics and development studies. Among the highlights of the third edition of the Dictionary are: • Several dozen brand New and Expansive entries for even more thorough coverage. • Updated and expanded material for hundreds of existing entries. • Several hundred Suggestions for Further Research, covering materials published up through the first 20 years of the life of the WTO. • Compilation, synthesis, and analysis of updated data on every one of America's FTAs, and of every one of Japan's EPAs. • Updated historical information about milestones in the economic development of the EU and China. In sum, the 1,500-page Dictionary is the user-friendly tool for students, scholars, and practitioners to navigate through and critically analyze the complex jargon and concepts in trade. The eBook versions of this title feature links to Lexis Advance for further legal research options. Comprised of 10 self-contained chapters, International Trade Law will provide readers with an understanding of the international legal framework in which trade between nations takes place. The authors detail the aims and historical development of intergovernmental and private systems of cross-border trading rules and institutions. The first half of the book focuses on the framework provided to the international trading system by the World Trade Organization (WTO), including the public international law dimension of trade, namely the exchange of goods, services and intellectual property rights, and competition remedies and foreign investment measures. The second half of the book expands on the legal ramifications of private actions in the international trading system and covers the contractual aspects of sales, transportation, payments and disputes settlement. The final chapter critically evaluates which aspects of the international trade should be regulated by the principles of justice. Every chapter includes an appendix with workshop activities, which are crucial to bridging the gap between theory and practice in the understanding of international trade law. From the Foreword: "You are about to embark on the study of international trade law using a textbook that incorporates the most advanced and up-to-date research on the law treaties, statutes, cases and doctrines that together make up international trade law today." - Professor Frank J Garcia, Boston College Law School

This book presents a comprehensive and systematic study of the principal aspects of the modern law of international commercial transactions. Based on diverse sources, including legislative texts, case law, international conventions, and a variety of soft-law instruments, it highlights key topics such as the international sale of goods, international transport, marine insurance, international finance and payments, electronic commerce, international commercial arbitration, standard trade terms, and international harmonization of trade laws. In focusing on the private law aspects of international trade, the book closely analyzes the relevant statutes, case law and the European Union (EU) and international uniform law instruments like the Rome I Regulation, the UN Convention on the Contracts for the International Sale of Goods (CISG), UNCITRAL Model Laws; non-legislative instruments including restatements such as the UNIDROIT Principles on International Commercial Contracts, and rules of business practices codified by the ICC such as the Arbitration Rules, UCP 600 and different versions of the INCOTERMS. The book clearly explains the key concepts and nuances of the subject, offering incisive and vivid analyses of the major issues and developments. It also traces the evolution of the law of international trade and explores the connection between the *lex mercatoria* and the modern law. Comprehensively examining the issue of international harmonization of trade laws from a variety of perspectives, it provides a detailed account of the work of major players in the field, including UNCITRAL, UNIDROIT, ICC, and the Hague Conference on Private International Law (HCCH). Adopting the comparative law method, this book offers a critical analysis of the laws of two key jurisdictions—India and England—in the context of export trade. In order to stimulate discussion on law reform, it explains the similarities and differences not only between laws of the two countries, but also between the laws of India and England on the one hand, and the uniform law instruments on the other. Given its breadth of coverage, this book is a valuable reference resource not only for students in the fields of law, international trade, and commercial law, but also for researchers, practitioners and policymakers.

U.S. trade obligations derive from international trade agreements, including the General Agreement on Tariffs and Trade (GATT), the other World Trade Organization (WTO) agreements, and additional bilateral and regional trade agreements, as well as domestic laws intended to implement those agreements or effectuate U.S. trade policy goals. This report provides an overview of both sources of U.S. trade obligations, focusing on a select group of agreements, provisions, and statutes that are most commonly implicated by U.S. trade interests and policy. This report is not intended as a comprehensive review of trade law. It is an introductory overview of the legal framework governing trade-related measures.

International Trade Regulation: Readings, Cases, Notes, and Problems employs a practical, problem-based approach that reveals how and why the World Trade Organization and U.S. trade statutes are so integral to the regulation of international trade.

Non-discrimination is a central obligation under both tax treaty and trade law. However, in seeking to strike a balance between national and international interests, its application differs in the two areas of practice. This deeply researched and authoritative work, which explains the policy issues and how non-discrimination analysis works, provides a comprehensive review of non-discrimination rules in WTO and tax treaty law, combining a critical commentary on case law with proposals for an innovative concept for solving cases of discrimination in tax treaty law. Among the practical issues affecting non-discrimination examined in detail are the following: implications that can be drawn from the concepts of non-discrimination under WTO law and Article 24 of the OECD Model; direct and indirect discrimination and analysis of comparability in WTO law and tax treaty law; the MFN and NT rules under the GATT and GATS; the meaning of 'likeness' and 'less favourable treatment'; claiming non-discriminatory tax treatment before tax administrations and courts under a tax treaty; justification of measures against harmful tax competition, low taxation and hybrid mismatch arrangements; thin capitalisation rules, progressive tax rates, foreign losses, group taxation and relief from juridical and economic double taxation under Article 24 of the OECD Model; and integrating a justification defence into any stage of a non-discrimination analysis. The author establishes to what extent formal, substantive and subjective approaches may be applied in a non-discrimination analysis, providing the reasons for the approaches taken. A two-step comparability procedure is applied to selected cases of potential tax discrimination, demonstrating how policy arguments can be addressed under Article 24 of the OECD Model. Drawing on over a half-century of case law in both areas of practice, this comprehensive

study of the non-discrimination rules under WTO law and international tax law will be invaluable in systematically solving cases of tax discrimination under Article 24 of the OECD Model and putting forward arguments at any stage of a WTO analysis. Policymakers will benefit from the author's clear explanation of how national law should comply with international obligations. Also, taxpayers' advisers will proceed confidently in claims of tax treaty discrimination, and academics will discover an incomparable overview and analysis of anti-discrimination rules in international trade law and double taxation conventions.

The growth of national economic regulation and the process of globalisation increasingly expose international transactions to an array of regulations from different jurisdictions. These developments often contribute to widespread international contractual failures when parties claim the incompatibility of their contractual obligations with regulatory laws. The author challenges conventional means of dispute resolution and argues for an interdisciplinary approach whereby disciplines such as international economic law, conflict of laws, contract law and economic regulations are functionally united to resolve international and multifaceted regulatory disputes. He identifies the normative foundation of contract law as an important determinant in this process, contending that contract law is essentially neutral and underpinned by the concept of corrective justice, while economic regulations are mainly prompted by distributive justice. Applying this corrective/distributive justice dichotomy to international contracts, the author critically assesses major conflict of laws approaches such as 'proper law', 'the Rome Convention' and 'governmental interest analysis', which could disregard either public interest or private rights. The author, taking these theories into account, proposes an alternative two-dimensional interest analysis approach. He tests the viability of this approach with reference to arbitral awards and court decisions in various jurisdictions and concludes that it uniquely fits into the structure of international commercial arbitration. In adopting this approach arbitrators would take into account both corrective and distributive justice, and to the extent that corrective justice prevails, would be able to avert a total failure of the contract.
