This book will be of interest to a broad readership, regardless of whether they have a background in sociolinguistics, functional linguistics or genre theories. It presents an accessible “meta-language” (i.e. a language for talking about language) that is workable and usable for teachers and researchers from both language and content backgrounds, thus facilitating collaboration across content and language subject panels. Chapters 1 to 3 lay the theoretical foundation of this common meta-language by critically reviewing, systematically presenting and integrating key theoretical resources for teachers and researchers in this field. In turn, Chapters 4 to 7 focus on issues in pedagogy and assessment, and on school-based approaches to LAC and CLIL, drawing on both research studies and the experiences of front-line teachers and school administrators. Chapter 8 provides a critical and reflexive angle on the field by asking difficult questions regarding how LAC and CLIL are often situated in contexts characterized by inequality of access to the linguistic and cultural capitals, where the local languages of the students are usually neglected or viewed unfavourably in relation to the L2 in mainstream society, and where teachers are usually positioned as recipients of knowledge rather than makers of knowledge. In closing, Chapter 9 reviews the state of the art in the field and proposes directions for future inquiry.

Diagnosing learning disabilities (LD) in children has never been an easy task. The multiple approaches in use complicate the assessment process, raising the risk of young students getting the wrong services, or none at all. It is clear that more accurate diagnosis and classification methods are needed to advance the prevention and treatment of difficulties in reading and mathematics. Diagnostic Assessment of Learning Disabilities in Childhood takes important steps to cut through the confusion. This timely resource weighs the strengths and weaknesses of commonly used assessment methods including the aptitude-achievement discrepancy, cognitive processing, RTI and low achievement approaches and introduces the author's academic impairment model as a promising alternative. A chapter on comorbid disorders in students with LD guides readers in the fine points of differential diagnosis. And to make the coverage especially practical, the book's features link the theoretical to the real-world practice of LD assessment, among them: Overviews of LD identification and definitions. Analysis of widely used diagnostic approaches with strengths and weaknesses. Examples of assessment protocols and report writing. Case examples illustrating diagnostic issues. Q&A sections with leading experts in the field. Useful summaries, appendices and resource links. Diagnostic Assessment of Learning Disabilities in Childhood is an invaluable reference for school and clinical child psychologists, special education and allied educational professionals and researchers and graduate students in school, educational and clinical child psychology who are dedicated to higher measurement standards and greater opportunities for children's academic success.

Distributed leadership has become an important term for educational policymakers, practitioners, and researchers in the United States and around the world, but there is much diversity in how the term is understood. Some use it as a synonym for democratic or participative leadership. This book examines what it means to take a distributed perspective based on extensive research and a rich theoretical perspective developed by experts in the field. Including numerous case studies of individual schools and providing empirically based accounts of school settings using a distributed perspective, this thorough volume: Explores how a distributed perspective is different from other frameworks for thinking about leadership. Provides clear examples of how taking a distributed perspective can help researchers understand and connect more directly to leadership practice. Illustrates how the day-to-day practice of leadership is an important line of inquiry for scholars and for those interested in improving school leadership.
