Most public administration texts overly compartmentalize the subject and don't interconnect the various specializations within government, which leaves a serious gap in preparing students for public service. Government: A Public Administration Perspective is designed to fill that void. It provides a comprehensive, multidisciplinary view of government that includes perspectives from political science, political theory, international relations, organizational sociology, economics, and history. The text draws on classic and modern literature from all these areas to analyze government at four different levels - ideational, societal, organizational, and individual layers. It links public administration's various subfields - human resource management, budgeting, policy making, organizational theory, etc. - into a holistic framework for the study of government. It also includes an extensive bibliography drawing from American and European literature in support of the book's global, historical, and comparative approach.

Philosopher and historian Christian Jaramillo puts forward new and revolutionary approaches to understanding God, the stances that religions should adopt, the development of science, and the State's role in the pursuit of human freedom. By studying the evolution of mankind and its religious societies over the past thirteen thousand years, Jaramillo demonstrates that, through syncretism, man has ultimately worshipped the same one God under different names. The author reaffirms the existence of God, the validity of universal philosophers and the significance of religions in the construction of ancient and modern societies. In this book, Jaramillo proposes a new theology for life, rejects immortality after death, and unravels some

of the religious myths that have created structural flaws for humanity in constructing their societies, such as the deterioration of human habitat, the destruction of ethnic groups and the many confrontations between races and peoples. Jaramillo denounces the powerful obsession of religions in controlling mankind through their influence over State decisions, to the detriment of the spiritual freedoms and inalienable natural liberties of man, which supersede the State and inhibit science. We believe that the works of this brilliant thinker will kick-start a revolution in theological, philosophical and social approaches ? all of which will remain the subject of hot debate in the coming centuries.
