The Journal of Evidence-Based Practices for Schools is a leader in publishing research-to-practice articles for educators and school psychologists. The mission of this journal is to positively influence the daily practice of school-based professionals through studies demonstrating successful research-based practices in educational settings. As a result, the editors are committed to publishing articles with an eye toward improving student performance and outcomes by advancing psychological and educational practices in the schools. They seek articles using non-technical language that (1) outline an evidence-based practice, (2) describe the literature supporting the effectiveness and theoretical underpinnings of the practice, (3) describe the findings of a study in which the practice was implemented in an educational setting, and (4) provide readers with information they need to implement the practice in their own schools in a section entitled Implementation Guidelines. The Journal of Evidence-Based Practices for Schools differs from other scholarly journals in that it features articles that demonstrate empirically-based procedures for readers to apply the practice in their setting.

This handbook offers a theoretical foundation for the adaptation of Parent-Child Interaction Therapy (PCIT) for children with autism spectrum disorder (ASD) and their families. The volume examines current treatments for children with ASD and provides a rationale for why PCIT is considered a strong option to address many of the concerns found within this population of children and families. It presents an overview of PCIT theory, the goals of PCIT, the unique aspects of the treatment, and the exceptional outcomes. The handbook demonstrates the versatility of PCIT in conjunction with standard science-based therapies in addressing specific behavioral problems in this young population. Chapters provide a theoretical basis for PCIT, the empirical evidence for its efficacy, clinical considerations, and training issues. Chapters also offer a selection of case studies that help illustrate how PCIT has been successful in treating children with autism. The handbook concludes by identifying the gaps that need to be addressed by future research. Topics featured in the Handbook include: A clinical description of Parent-Child Interaction Therapy. The effects of medication for individuals with ASD. The importance of parent-child interactions in social communication and development. Teaching complex social behavior to children with ASD. Internet-delivered PCIT (I-PCIT) for children with autism. Child-Directed Interaction treatments for children with ASD. Parent-Directed Interaction treatments for children on the autism spectrum. The Handbook of Parent-Child Interaction Therapy for Children on the Autism Spectrum is a must-have resource for researchers, professors, clinicians/practitioners/therapists, and graduate students across many interrelated disciplines, including child and school psychology, behavioral therapy, social work, child and adolescent psychiatry, pediatrics, and family studies as well as occupational therapy, physical therapy, behavior analysis, and speech therapy.

This volume examines the ramifications of individual differences in therapy outcomes for a wide variety of communication disorders. In an era where evidence-based practice is the clinical profession's watchword, each chapter attacks this highly relevant issue from a somewhat different perspective. In some areas of communication disorders, considering the variance brought by the client into the therapeutic 'mix' has a healthy history, whereas in others the notion of how individual client profiles mesh with therapy outcomes has rarely been considered. Through the use of research results, case study descriptions and speculation, the contributors have creatively woven what we know and what we have yet to substantiate into an interesting collection of summaries useful for therapy programming and designing clinical research.

Brené Brown heeft de afgelopen twintig jaar onderzoek gedaan naar de emoties en ervaringen die betekenis geven aan ons leven, en werkte de afgelopen zeven jaar nauw samen met leiders en cultuurveranderaars over de hele wereld. Ze ontdekte dat allerlei bedrijfstakken, van kleine start-ups tot Fortune 50-bedrijven, met dezelfde vraag worstelen: 'Hoe ontwikkelen we moediger leiders en hoe verankeren we moed en durf in onze bedrijfscultuur?' In dit nieuwe boek combineert Brené haar onderzoeksresultaten met persoonlijke verhalen en voorbeelden om deze vraag te beantwoorden. Durf te leiden gaat over echt leiderschap: vanuit het hart en vol moed.

This book examines philosophical and scientific implications of Neodarwinism relative to recent empirical data. It develops explanations of social behavior and cognition through analysis of mental capabilities and consideration of ethical issues. It includes debate within cognitive science among explanations of social and moral phenomena from philosophy, evolutionary and cognitive psychology, neurobiology, linguistics, and computer science. The series Cognitive Science provides an original corpus of scholarly work that makes explicit the import of cognitive-science research for philosophical analysis. Topics include the nature, structure, and justification of knowledge, cognitive architectures and development, brain-mind theories, and consciousness.

This series looks at child-centred social issues such as hitting, being fair, getting angry, and feeling sad. The right and wrong decisions are explored in each situation.

Most studies of social development in children have relied on the assumption that adults' instructions to children pass on knowledge of the rules of behavior which govern and preserve society. In this volume, James Youniss argues that the child's relations with his or her friends and peers make a distinctive and critically important contribution to social development. While the child's relations with parents and other adults provide a sense of order and authority, peer relations are a source of sensitivity, self-understanding, and interpersonal cooperation. Following a discussion of the views of Harry Stack Sullivan and Jean Piaget, whose theories are synthesized in Youniss's perspective, Youniss presents a wealth of empirical data from studies in which children describe their own views of their two social worlds.
