In most cases, an opening in the curb connects to a scour-resistant channel or chute which prevents erosion of the embankment or slope. In some instances, the channel or chute may be replaced with a pipe placed in the roadway embankment as illustrated in Figure 10-8.

Residents of urban and suburban areas of the country tend not to think much about how they travel to and from work, the store or a restaurant. However, those in rural parts of the country who live on a stretch of county roads with very few homes know that if it rains, the bridge may not be crossable. Today, civil engineers typically build roads and highways in urban and suburban ...
