Developing the Physical Education Curriculum An Achievement-Based Approach Waveland Press

This timely and accessible volume explores how our understanding of research in child development can help cultivate the knowledge, skills, and attitudes children need for informed and thoughtful participation in society by viewing the curriculum through a developmental lens. Biddle and Garcia-Nevarez cover a range of key topics including characteristics of physical, cognitive, and psychosocial development of children; heritable and environmental influences on children's developing self; language and literacy development; mathematical cognition; growth mindsets; and evidence-based positive behavioral interventions and supports. The expert team of contributors offers an advanced exploration of developmental science and how this applies to learning and education in order to create inclusive environments that support children with a range of abilities, including those with the most significant medical, intellectual, and developmental delays. Each chapter contains boxes exploring how the topic relates to the themes of "Promoting Social and Emotional Competence Theory," "Research to Practice Connection," "Common Core and Other Standards," and "Social Justice and Diversity," ensuring comprehensive and consistent coverage across the volume. Developmentally Appropriate Curriculum and Instruction will be essential reading for students of child development and education, as well as educators and those in teacher training who are interested in how theory and research can be effectively harnessed to improve children's outcomes. Offers effective ways to present math concepts, opportunities for guided practice, and ideas for modifying the material to provide access to the same content standards for all students.

With patients leaving the hospital sicker and more care being done in outpatient settings or at home, patients need to become active, informed participants on their health care team. This one-of-a-kind text provides unique advice to help nurses apply their knowledge and skills to teaching patients in the clinical setting with specific diseases, including special populations. The book is organized into two basic sections - the first describes the theories and process of learning and teaching, and the second focuses on the major fields of patient education practice in place today. The new case study approach also makes it easy for students to understand how to apply teaching strategies to specific patient types resulting in better informed patients and a more positive teaching/learning experience. Covers a variety of learning theories and concepts, as well as strategies for applying them in patient teaching. Uses evidence-based patient education practice, with extensive citations to the research base. Presents key issues in patient education such as literacy, use of patient decision aids, and multiple patient conditions for which organized patient education should be developed. Includes study questions with suggested answers. Teaching basics streamlined for use as the main text for a course or as a supplement to any clinically oriented course. Includes multiple case examples, at every stage of the teaching process, which students can use as models to guide their own practice. New case study approach provides multiple case examples enabling readers to understand how to apply teaching strategies to specific patient types and settings. Now includes significant content in patient self-management of chronic conditions, the largest growing area of patient education.

Master Modern Networking by Understanding and Solving Real Problems Computer Networking Problems and Solutions offers a new approach to understanding networking that not only illuminates current systems but prepares readers for whatever comes next. Its problem-solving approach reveals why modern computer networks and protocols are designed as they are, by explaining the problems any protocol or system must overcome, considering common solutions, and showing how those solutions have been implemented in new and mature protocols. Part I considers data transport (the data plane). Part II covers protocols used to discover and use topology and reachability information (the control plane). Part III considers several common network designs and architectures, including data center fabrics, MPLS cores, and modern Software-Defined Wide Area Networks (SD-WAN). Principles that underlie technologies such as Software Defined Networks (SDNs) are considered throughout, as solutions to problems faced by all networking technologies. This guide is ideal for beginning network engineers, students of computer networking, and experienced engineers seeking a deeper understanding of the technologies they use every day. Whatever your background, this book will help you quickly recognize problems and solutions that constantly recur, and apply this knowledge to new technologies and environments.

There has been little public discussion on the devastating impact of Covid-19 on mothers, or a public acknowledgement that mothering is frontline work in this pandemic. This collection of 45 chapters and with 70 contributors is the first to explore the impact of the pandemic on mothers' care and wage labour in the context of employment, schooling, communities, families, and the relationships of parents and children. With a global perspective and from the standpoint of single, partnered, queer, racialized, Indigenous, economically disadvantaged, disabled, and birthing mothers, the volume examines the increasing complexity and demands of childcare, domestic labour, elder care, and home schooling under the pandemic protocols; the intricacies and difficulties of performing wage labour at home; the impact of the pandemic on mothers' employment; and the strategies mothers have used to manage the competing demands of care and wage labour under COVID-19. By way of creative art, poetry, photography, and creative writing along with scholarly research, the collection seeks to make visible what has been invisibilized and render audible what has been silenced: the care and crisis of motherwork through and after the COVID-19 pandemic.
