The Transportation Experience explores the historical evolution of transportation modes and technologies. The book traces how systems are innovated, planned and adapted, deployed and expanded, and reach maturity, where they may either be maintained in a polished obsolesce often propped up by subsidies, be displaced by competitors, or be reorganized and renewed. An array of examples supports the idea that modern policies are built from past experiences.

William Garrison and David Levinson assert that the planning (and control) of nonlinear, unstable processes is today's central transportation problem, and that this is universal and true of all modes. Modes are similar, in that they all have a triad structure of network, vehicles, and operations; but this framework counters conventional wisdom. Most think of each mode as having a unique history and status, and each is regarded as the private playground of experts and agencies

holding unique knowledge, operating in isolated silos. However, this book argues that while modes have an appearance of uniqueness, the same patterns repeat: systems policies, structures, and behaviors are a generic design on varying modal cloth. In the end, the illusion of uniqueness proves to be myopic. While it is true that knowledge has accumulated from past experiences, the heavy hand of these experiences places boundaries on current knowledge; especially on the ways professionals define problems and think about processes. The Transportation Experience provides perspective for the collections of models and techniques that are the essence of transportation science, and also expands the boundaries of current knowledge of the field.

This book chronicles the divergent growth trends in car production in Belgium and Spain. It delves into how European integration, high wages, and the demise of GM and Ford led to plant closings in Belgium. Next, it investigates how lower wages and the expansion strategies of Western European automakers stimulated expansion in the Spanish auto industry. Finally, it offers three alternate scenarios regarding how further EU expansion and Brexit may potentially reshape the geographic footprint of European car production over the next ten years. In sum, this book utilizes history to help expand the knowledge of scholars and policymakers

regarding how European integration and Brexit may impact future auto industry investment for all EU nations.

This book offers a critical analysis of recent developments in the automotive industry of East-Central Europe (ECE). Economists, industry specialists and national governments have considered the rapid development of the automotive industry in ECE in the past twenty years an unqualified success. This rapid growth has been based on large inflows of foreign direct investment (FDI) from Western Europe, North America, Japan and South Korea, and it significantly contributed to GDP growth, created thousands of new jobs, and completely transformed the previously existing automotive industry in the region. This volume offers an analysis that goes beyond uncritical celebratory accounts of this rapid growth. It is based on original, detailed firm-level research conducted by the author in Czechia and Slovakia between 2009 and 2015 that covered assembly firms and the networks of component suppliers. Theoretically and conceptually, the analysis will draw on the global production networks and global value chains perspectives. Drawing on the original empirical data and on additional available information, this volume concentrates on several important questions related to

the development of the automotive industry in ECE in the 2000s:• The role of FDI in the rapid development of the automotive industry after 1990 and particularly in the 2000s.• The upgrading of the automotive industry in East-Central Europe through FDI• The position of ECE in the automotive industry research and development (R&D)• The effects of the 2008-2009 economic crisis in the automotive industry of ECE.• The role of state in the rapid development of the automotive industry in ECE in the 1990s and 2000s.• The effects of FDI on domestic firms in the form of linkages between foreign-owned and domestic firms and spillovers from foreign-owned to domestic firms.

The papers in volume 6 of Research in Competence-Based Management identify, elaborate theoretically, and investigate empirically a number of new kinds of dynamics in industries and product markets.
