

Presentation By Mcb

More than 20 billion dollars worth of biopharmaceuticals are scheduled to go off-patent by 2006. Given the strong political impetus and the development of technological tools that can answer the questions regulatory authorities may raise, it is inevitable that the FDA and EMEA will allow biogeneric or biosimilar products. Even with all the regulato

A Practical Reference Guide to Emergency Care Essentials of Emergency Medicine, Second Edition, provides physicians and medical residents with a comprehensive reference guide to the practice of emergency medicine in clinical settings. Covering both complicated and straightforward issues, Essentials of Emergency Medicine, Second Edition, serves as a quick-reference handbook for the full range of challenges encountered in emergency departments, as well as a manual for physician self-assessment and study guide for those seeking recertification. This second edition, compiled by an editorial board of veteran emergency medicine providers, draws expert content from 184 contributors. New and updated chapters include expanded sections on pediatrics and toxicology as well as the latest science on emergency psychiatric care. With Essentials of Emergency Medicine, Second Edition, physicians and medical residents can readily assess and expand their knowledge of emergency medicine, ensuring their patients receive the highest quality care over the full continuum of treatment, from the emergency room to inpatient departments.

Exploring the intersection between religion, gender and sexuality within the context of everyday life, this volume examines contested identities, experiences, bodies and desires on the individual and collective levels. With rich case studies from the UK, USA, Europe, and Asia, Religion, Gender and Sexuality in Everyday Life sheds light on the manner in which individuals appropriate, negotiate, transgress, invert and challenge the norms and models of various religions in relation to gender and sexuality, and vice versa. Drawing on fascinating research from around the world, this book charts central features of the complexities involved in everyday life, examining the messiness, limits, transformations and possibilities that occur when subjectivities, religious and cultural traditions, and politics meet within the local as well as transnational contexts. As such, it will be of interest to scholars of sociology, anthropology, geography and cultural studies examining questions of religion and spirituality, gender and sexuality, and individual and collective identities in contemporary society.

The only detailed examination of how the British media treat Muslims Uncovering endemic racism in the British Media Ever since 9/11, Muslims and Islam have dominated the headlines in the UK. In this important book, several leading media commentators examine the phenomenon of 'Islamophobia' and ask how we can tackle it. Charting recent media controversies, from the Archbishop of Canterbury's comments on Sharia law to the veil 'debate', the book argues that media hostility to Islam alienates Muslims and undermines efforts to combat

extremism. With interviews from Muslim journalists and examples of press-fuelled myths about Islam in Britain, this is a captivating insight into how Muslims are depicted in the West.

The dynamic and fast-expanding business events sector plays a vital role in the professional lives of hundreds of millions of people worldwide by providing settings in which they can meet for the purposes of negotiation, deliberation, motivation, the dissemination of knowledge, and the celebration of their greatest career-related achievements. This book provides a sound practical and theoretical context for the study of this subject by covering, in depth, all categories of business-related events including corporate meetings, association conferences, political events, incentive travel, exhibitions, corporate hospitality, awards ceremonies and SMERF (social, military, educational, religious and fraternal) gatherings. This new edition has been extensively revised and updated to reflect recent developments in business events, including: Five new chapters on business events destination marketing, knowledge, sustainability, ethics and technology New 'It's my job' voice boxes offering practical insights from people employed in the business events industry A wide range of new case studies illustrating business events throughout the world, including emerging business events destinations such as Russia and the Middle East Written in an accessible yet analytical manner, Business Events is essential reading for all students of events, tourism and hospitality management.

Since 2011, with the British Government's counter-radicalisation strategy, Prevent, non-violent Islamist groups have been considered a security risk for spreading a divisive ideology that can lead to radicalisation and violence. More recently, the Government has expressed concerns about their impact on social cohesion, entryism, and women's rights. The key protagonists of non-violent Islamist 'extremism' allegedly include groups and individuals associated with the Muslim Brotherhood and Jama'at-i-Islami. They have been described as part of the 'global Muslim Brotherhood', but do they constitute a singular phenomenon, a social movement? This book shows that such groups and individuals do indeed comprise a movement in Britain, one dedicated to an Islamic 'revival'. It shows how they are networked organisationally, bonded through ideological and cultural kinship, and united in a conflict of values with the British society and state. Using original interviews with prominent revivalist leaders, as well as primary sources, the book also shows how the movement is not so much 'Islamist' in aspiring for an Islamic state, but concerned with institutionalising an Islamic worldview and moral framework throughout society. The conflict between the Government and the global Muslim Brotherhood is apparent in a number of different fields, including education, governance, law, and counterterrorism. But this does not simply concern the direction of Government policy or the control of state institutions. It most fundamentally concerns the symbolic authority to legitimise a way of seeing, thinking and living. By assessing this multifaceted conflict, the book presents an exhaustive and up-to-date analysis of the political and cultural

fault lines between Islamic revivalists and the British authorities. It will be useful for anyone studying Islam in the West, government counter-terrorism and counter-extremism policy, multiculturalism and social cohesion.

Cytometry is characterization and measurement of cells and cellular constituents, most often used to immunophenotype cells - that is, to distinguish healthy cells from diseased cells. Flow Cytometry specifically is quite sensitive, allowing researchers to detect rare cell types and residual levels of disease, and as such has been the method of choice for important studies such as monitoring the blood of AIDS patients. For this reason, there is a great need for a practical, comprehensive manual that will be useful across a broad range of laboratories.

This volume, as part of the Reliable Lab Solution Series, delivers such a tool, offering busy researchers across many disciplines a handy resource of all the best methods and protocols for Cytometry to use at the bench. * Highlights top downloaded and cited chapters, authored by pioneers in the field and enhanced with their tips, and pitfalls to avoid. * Loaded with detailed protocols developed and used by leaders in the field. * Refines, organizes and updates popular methods from one of our top selling series, Methods in Cell Biology

Macroautophagy, the major lysosomal pathway for recycling intracellular components including whole organelles, has emerged as a key process modulating tumorigenesis, tumor-stroma interactions, and cancer therapy. An impressive number of studies over the past decade have unraveled the plastic role of autophagy during tumor development and dissemination. The discoveries that autophagy may either support or repress neoplastic growth and contextually favor or weaken resistance and impact antitumor immunity have spurred efforts from many laboratories trying to conceptualize the complex role of autophagy in cancer using cellular and preclinical models. This complexity is further accentuated by recent findings highlighting that various autophagy-related genes have roles beyond this catabolic mechanism and interface with oncogenic pathways, other trafficking and degradation mechanisms and the cell death machinery. From a therapeutic perspective, knowledge of how autophagy modulates the tumor microenvironment is crucial to devise autophagy-targeting strategies using smart combination of drugs or anticancer modalities. This eBook contains a collection of reviews by autophagy researchers and provides a background to the state-of-the-art in the field of autophagy in cancer, focusing on various aspects of autophagy regulation ranging from its molecular components to its cell autonomous role, e.g. in cell division and oncogenesis, miRNAs regulation, cross-talk with cell death pathways as well as cell non-autonomous role, e.g. in secretion, interface with tumor stroma and clinical prospects of autophagy-based biomarkers and autophagy modulators in anticancer therapy. This eBook is part of the TransAutophagy initiative to better understand the clinical implications of autophagy in cancer.

Widely regarded as the state-of-the-science reference on attachment, this handbook interweaves theory and cutting-edge research with clinical applications. Leading researchers examine the origins and development of attachment theory; present biological and evolutionary perspectives; and explore the role of attachment processes in relationships, including both parent-child and romantic bonds. Implications for mental health and psychotherapy are

addressed, with reviews of exemplary attachment-oriented interventions for children and adolescents, adults, couples, and families. Contributors discuss best practices in assessment and critically evaluate available instruments and protocols. New to This Edition *Chapters on genetics and epigenetics, psychoneuroimmunology, and sexual mating. *Chapters on compassion, school readiness, and the caregiving system across the lifespan. *Chapter probing the relation between attachment and other developmental influences. *Nearly a decade's worth of theoretical and empirical advances.

Lists citations with abstracts for aerospace related reports obtained from world wide sources and announces documents that have recently been entered into the NASA Scientific and Technical Information Database.

In this book Professor Mumford, himself a leading exponent of Action Learning, has brought together more than 34 articles and papers on the subject from a variety of sources. They reflect the experience not only of those responsible for AL programmes but also of learners and client organizations. A wide range of issues is addressed, from underlying philosophy to evaluation, from the learning process itself to ways of integrating the 'P' and the 'Q' of Revans' famous equation.

This is an EXACT reproduction of a book published before 1923. This IS NOT an OCR'd book with strange characters, introduced typographical errors, and jumbled words. This book may have occasional imperfections such as missing or blurred pages, poor pictures, errant marks, etc. that were either part of the original artifact, or were introduced by the scanning process. We believe this work is culturally important, and despite the imperfections, have elected to bring it back into print as part of our continuing commitment to the preservation of printed works worldwide. We appreciate your understanding of the imperfections in the preservation process, and hope you enjoy this valuable book.

Includes articles on international business opportunities.

Undergraduate Research is any effort undertaken by an undergraduate that advances their academic knowledge and leads to new scholarly insights. This volume tells the story of undergraduate research programs at Historically Black Colleges and Universities from the voices of faculty mentors, student mentees and UGR program directors and coordinators.

Topic Editor Prof. John E. Harris is Scientific Founder of Villarix Therapeutics, Inc. Topic Editor Prof. Julien Seneschal received financial support from Sanofi Genzyme and Calypso Biotech. Topic Editor Prof. Caroline Le Poole is the CSO for Temprian Therapeutics, a company hoping to bring an HSP70iQ435A-based treatment to clinical trials for vitiligo. The approach for this treatment is different and separate from the proposed Research Topic. Please note that studies investigating HSP70iQ435A-based treatment thus fall out of the remit of this project. All other Topic Editors declare no competing interests with regards to the Research Topic subject.

Monitoring Vesicular Trafficking in Cellular Responses to Stress, Volume 164 in the Methods in Cell Biology series, highlights new advances in the field, with this new volume presenting interesting chapters on a variety of timely topics. Each chapter is written by an international board of authors. Provides the authority and expertise of leading contributors from an international board of authors Presents

the latest release in the Methods in Cell Biology series Includes the latest information on the topic of Monitoring vesicular trafficking in cellular responses to stress

Heat shock proteins (HSPs) were discovered as polypeptides induced by stress that can be found in all kingdoms of cellular organisms. Their functions were, at first enigmatic and these proteins were thus classified by molecular weight, as in—Hsp27, Hsp70, Hsp90, Hsp110. More recently, each of these size-classified molecules has attributed a role in protein folding, and they thus came to be known, as a class, as molecular chaperones. However, they possess properties beyond chaperoning. Indeed, their discovery in the extracellular spaces suggested roles in regulation of the immune responses.

The History and Bioethics of Medical Education: "You've Got to Be Carefully Taught" continues the Routledge Advances in the History of Bioethics series by exploring approaches to the teaching of bioethics from disparate disciplines, geographies, and contexts. Van Rensselaer Potter coined the phrase "Global Bioethics" to define human relationships with their contexts. This and subsequent volumes return to Potter's founding vision from historical perspectives and asks, how did we get here from then? The patient-practitioner relationship has come to the fore in bioethics; this volume asks: is there an ideal bioethical curriculum? Are the students being carefully taught and, in turn, are they carefully learning? This volume will appeal to those working in both clinical medicine and the medical humanities, as vibrant connections are drawn between various ways of knowing. The first academic account of the 21st century anti-war and peace movement. Empirically rich and conceptually innovative, Anti-War Activism pays especially close attention to the changed information environment of protest, the complex alliances of activists, the diversity of participants, as well as campaigners' use of new (and old) media.
