Spekulation ist der Versuch, durch Vorhersage der Zukunft mehr zu verdienen als üblich. Spekulation ist immer mit einem höheren Risiko verbunden, das darin besteht, dass die Spekulation nicht aufgeht und Verluste eintreten. Seit Computer für kommerzielle Zwecke zur Verfügung stehen, werden Rechenanlagen in der Investitionsanalyse eingesetzt. Unter Ausnutzung der hohen Rechen- und Speicherkapazität von Computern hoffte man seitdem, Modelle durchrechnen zu können, die dem Menschen überlegene Prognosefähigkeiten besitzen und durch deren Benutzung sich überdurchschnittliche Gewinne an den Finanz- und Kapitalmärkten erzielen ließen. In der Praxis des Portfoliomanagements tritt das Spekulationsmotiv gegenüber dem Ziel der Kapitalerhaltung zurück. Computersysteme werden heute im Portfoliomanagement hauptsächlich als Informationssysteme und für administrative Aufgaben eingesetzt. Der Computereinsatz im Portfoliomanagement ist in den letzten Jahren besonders aktuell geworden, da erstens die Preise von Rechnern stark gesunken sind und zweitens das Aufkommen von preiswerten Datenübertragungseinrichtungen und öffentlichen Datenbanken es erstmals ermöglicht, große Mengen von Investitionsdaten maschinell zu bearbeiten. Ich habe mir deshalb zur Aufgabe gestellt zu untersuchen, welche Einsatzmöglichkeiten im Portfoliomanagement es für die elektronische Datenverarbeitung gibt und wie deren Einsatz aussehen kann. Das Thema dieser Dissertation lautet "Computerunterstützung im Portfoliomanagement". An dieser Stelle möchte ich ganz herzlich meinen Interviewpartnern von den Banken und anderen Unternehmen danken, ohne deren Informationen die Dissertation in dieser Form nicht möglich gewesen wäre. Mein Dank gilt weiterhin den diese Dissertation betreuenden Dozenten, Professor Dr. B. Lutz und Professor Dr. Leaf.

Plunkett's Health Care Industry Almanac is the only complete reference to the American Health Care Industry and its leading corporations. Whatever your purpose for researching the health care field, you'll find this award-winning reference book to be a valuable guide. No other source provides this massive book's easy-to-understand comparisons of national health expenditures, emerging technologies, patient populations, hospitals, clinics, corporations, research, Medicare, Medicaid, managed care, and many other areas of vital importance. Included in the market research sections are dozens of statistical tables covering every aspect of the industry, from Medicare expenditures to hospital utilization, from insured and uninsured populations to revenues to health care expenditures as a percent of GDP. A special area covers vital statistics and health status of the U.S. population. The corporate analysis section features in-depth profiles of the "Health Care 500"; the 500 largest and most successful for-profit firms within the health care system, from the leading companies in pharmaceuticals to the major managed care companies. Details for each corporation include growth plans, divisions, subsidiaries, brand names, competitive advantage and financial results--as well as executives by title and valuable contact information such as phone, fax, website and address. Purchasers of either the book or PDF version can receive a free copy of the company profiles database on CD-ROM, enabling key word search and export of key information, addresses, phone numbers and executive names with titles for every company profiled.

This book has the insightful and cost-effective techniques you can use today that will deliver tremendous returns for years to come.

'Due to their economic characteristics and also to their consequences on many aspects of collective life, information networks have always been at the edge of regulatory innovations and at the center of policy debates. The contributors of this volume combine long term visions of the factors determining regulatory policies with up-to-date analyses of technicalities to be dealt with, to provide the reader with an extended understanding of the issues and constraints shaping the future of digital networks.' Eric Brousseau, Université Paris-Dauphine, France and the European University Institute, Italy Digital markets worldwide are in rapid flux. The Internet and World Wide Web have traditionally evolved in a largely deregulated environment, but recently governments have shown great interest in this rapidly developing sector and are imposing regulations for a variety of reasons that are changing the shape of these industries. This book explores why the industrial organization of broadband ISPs, Internet backbone providers and content/application providers are in such turmoil. The expert contributors straddle the turbulent past of the telecoms sector and also contribute to its exciting though unpredictable future via positive analysis of past communications policies, which is then utilized to deduce lessons to guide future policy making decisions. It is illustrated that broadband ISPs no longer simply provide a conduit for service delivery; they are also involved in producing content and transaction services themselves, in competition with content and delivery providers. The blurring of the traditional lines between these three sectors, as each enters into the others' markets, is highlighted. The conclusion is that we are witnessing the emergence of powerful, competing platforms, linked in complex ways that challenge traditional economic analyses. Exploring governance issues, regulation and investment, next-generation service markets and wireless communication, this book will prove a fascinating and illuminating read for scholars, researchers, post-graduate students and policymakers with an interest in ICT, technology and innovation, economics and industrial organization.
