Though psychology as a discipline has grown enormously in popularity in recent years, compulsory courses in research methods and statistics are seldom embarked upon with any great enthusiasm within the undergraduate and postgraduate communities. Many postgraduate and PhD students start their research ill-equipped to design effective experiments and to properly analyse their results. This lack of knowledge also limits their ability to critically assess and evaluate research done by others. This book is a practical guide to carrying out research in health psychology and clinical psychology. It bridges the gap between undergraduate and postgraduate study. As well as describing the various techniques and methods available to students, it provides them with a proper understanding of what a specific technique does - going beyond the introductory descriptions typical of most undergraduate methods books. The book describes both quantitative and qualitative approaches to data collection, providing

valuable advice on methods ranging from psychometric testing to discourse analysis. For both undergraduate and postgraduate students, the book will be essential in making them aware of the full range of techniques available, helping them to design scientifically rigorous experiments, and effectively analyse their results.

RESEARCH IN REHABILITATION COUNSELING provides the basics that one would need to begin conducting a research investigation. It was written as a primary text for graduate level students and practitioners concerning the role of research in contemporary rehabilitation counseling. It is the authors' intent to provide a comprehensive overview of the philosophical, ethical, methodological, and analytic fundamentals of social science research, as well as to specify aspects of rehabilitation research that distinguish it from scientific inquiry in other helping professions. It has been thoroughly revised to accurately reflect the variation and wealth of research methodologies used in contemporary rehabilitation counseling research—more than 300 new references have been added. Most of the research examples cited were published in peer-reviewed rehabilitation counseling journals over the past decade, and these examples represent the current status of research methods as well as the most relevant contemporary topic areas of research and scholarship in the field. Accordingly, it may be used both as a research textbook and as a general introduction to the current scholarship. Because this book was written as an introductory research methods textbook for graduate students in rehabilitation counseling, the authors focus

This textbook provides a guide to the development of a rigorous and creative research-supported practice for students, practitioners, and researchers in counselling and psychotherapy. With an emphasis on critical thinking and “research mindedness”, it introduces practical research skills and links them to self-awareness and critical reflection. Learning how to creatively and effectively use oneself in the treatment process is an essential component in therapy training and this level of self-awareness has long been a neglected area in research – until now. With examples ranging from private therapeutic practice to psychiatric related research, each chapter combines ‘how-to-do-it’ advice with illustrative real-life examples. The authors outline the use of a broad range of research methods, embracing Arts- as well as RCT-based research, and covering qualitative, quantitative, pluralistic and mixed methods approaches. Whether you are engaging with research for the first time or already developing your own research projects, if you are a student at diploma level or taking a Postgraduate research course for counsellors, psychotherapists and counselling psychotherapists, this is essential reading for anyone looking for a book that combines self-awareness with analytical and practical skills.

Research Methods in Clinical and Counselling Psychology presents a practical description of the research process, taking readers sequentially through the basic steps of a project: groundwork, measurement, design, analysis and interpretation. It also addresses essential background issues, such as the underlying philosophy of the various research methods and the socio-political issues that arise in doing research in service settings. Clinical and counselling research methodology is currently developing rapidly, and psychologists are expanding their repertoire of methods. In this book the authors present a balanced appraisal of both traditional and emergent methods. They re-affirm the scientist-practitioner model: that clinical and counselling psychologists have a dual role as both clinicians and researchers. The authors argue that research embraces a broad range of activities which can be incorporated into everyday professional practice. The book is aimed at students and professionals who want to conduct their own research and those who simply want to understand published research better.
