This book is aimed at students who are thinking of studying Computer Science or a related topic at university. Part One is a brief introduction to the topics that make up Computer Science, some of which you would expect to find as course modules in a Computer Science programme. These descriptions should help you to tell the difference between Computer Science as taught in different departments and so help you to choose a course that best suits you. Part Two builds on what you have learned about the nature of Computer Science by giving you guidance in choosing universities and making your applications to them. Then Part Three gives you some advice on what to do once you get to university, how to get the most out of studying your Computer Science degree. The principal objective of the book is to produce happy students, students who know what they are letting themselves in for when they start a Computer Science course, and hence find themselves very well suited for the course they choose.

A student's future as a knowledge worker (one who "thinks for a living" with the task of problem solving) is the starting point of this book. With this in mind, the book combines a review of philosophical positions and problems with practical examples and perspectives gained from everyday challenges faced by knowledge workers in their businesses and organizations. Through the use of summative chapters, highlighted key concepts, questions for reflection, and illustrative examples on how to work with the theories presented, the book provides a clear and accessible introduction to this challenging subject. Philosophy of Science primarily addresses students studying language, communication, marketing, economics, and management. However, the survey of the theoretical schools of thought - as well as the discussions on research ethics and the role of research in society - will be equally relevant for other students in the humanities and the natural and social sciences.

Gaining Knowledge and Skills with Dyslexia and other SpLDs lays the foundation for skilling dyslexic/ SpLD people so that they can be autonomous, confident people, who can use their full potential with minimal disruption from the dyslexia/ SpLD. It is a comprehensive manual for helping dyslexic/ SpLD people, whether the help is given by specialist teachers, subject teachers, professionals of all kinds, family and friends, or general public such as shop keepers. There are lists of the most important ideas for policy-makers and general readers so that they can support best practice for helping dyslexic/ SpLD people. The book advocates changes of attitude that will be good for everyone but which are VITAL for dyslexic/ SpLD people. It is not proposing expensive solutions, though it does recognise that there will be times when accommodation is needed for some effects of dyslexia/ SpLD that an individual cannot work round. The book recognises that dyslexia/ SpLDs are variable syndromes that need constant monitoring. Given a range skills and knowledge to draw

on, a dyslexic/ SpLD person needs to be able to select the most suitable ones for any particular situation. Confidence grows when dyslexia/ SpLD can be managed well; dyslexic/ SpLD people can then function at their best. The book is addressed to someone alongside a dyslexic/ SpLD person, who may also be dyslexic/ SpLD, so the style of the book is suitable for dyslexic/ SpLD people. It uses a special layout to emphasise stories, insights, examples, exercises, tips, key points and summaries.

Exchange of information and innovative ideas are necessary to accelerate the development of technology. With advent of technology, intelligent and soft computing techniques came into existence with a wide scope of implementation in engineering sciences. Keeping this ideology in preference, this book includes the insights that reflect the 'Advances in Computer and Computational Sciences' from upcoming researchers and leading academicians across the globe. It contains high-quality peer-reviewed papers of 'International Conference on Computer, Communication and Computational Sciences (ICCCCS 2016), held during 12-13 August, 2016 in Ajmer, India'. These papers are arranged in the form of chapters. The content of the book is divided into two volumes that cover variety of topics such as intelligent hardware and software design, advanced communications, power and energy optimization, intelligent techniques used in internet of things, intelligent image processing, advanced software engineering, evolutionary and soft computing, security and many more. This book helps the perspective readers' from computer industry and academia to derive the advances of next generation computer and communication technology and shape them into real life applications.
