As the generic pharmaceutical industry continues to grow and thrive, so does the need to conduct adequate, efficient bioequivalence studies. In recent years, there have been significant changes to the statistical models for evaluating

bioequivalence. In addition, advances in the analytical technology used to detect drug and metabolite levels have m Whether you are inheriting a test team or starting one up, Manage Software Testing is a must-have resource that covers all aspects of test management. It guides you through the business and organizational issues that you are confronted with on a daily basis, explaining what you need to focus on strategically, tactically, and operationally. Using a risk-based approach, the author addresses a range of questions about software product development. The book covers unit, system, and non-functional tests and includes examples on how to estimate the number of bugs expected to be found, the time required for testing, and the date when a release is ready. It weighs the cost of finding bugs against the risks of missing release dates or letting bugs appear in the final released product. It is imperative to determine if bugs do exist and then be able to metric how quickly they can be identified, the cost they incur, and how many remain in the product when it is released. With this book, test managers can effectively and accurately establish these parameters.

TRB's Airport Cooperative Research Program (ACRP) Report 25, Airport Passenger Terminal Planning and Design comprises a guidebook, spreadsheet models, and a user's guide in two volumes and a CD-ROM intended to provide guidance in planning and developing airport passenger terminals and to assist users in analyzing common issues related to airport terminal planning and design. Volume 1 of ACRP Report 25 explores the passenger terminal planning process and provides, in a single reference document, the important criteria and requirements needed to help address emerging trends and develop potential solutions for airport passenger terminals. Volume 1 addresses the airside, terminal building, and landside components of the terminal complex. Volume 2 of ACRP Report 25 consists of a CD-ROM containing 11 spreadsheet models, which include practical learning exercises and several airport-specific sample data sets to assist users in determining appropriate model inputs for their situations, and a user's guide to assist the user in the correct use of each model. The models on the CD-ROM include such aspects of terminal planning as design hour determination, gate demand, check-in and passenger and baggage screening, which require complex analyses to support planning decisions. The CD-ROM is also available for download from TRB's website as an ISO image.

Engineers need to be able to test the flammability of the materials they use in buildings and other structures. However, the range of test procedures and regulations in this important area is often confusing. Flammability testing of materials used in construction, transport and mining provides an authoritative guide to current best practice in ensuring safe design. The book begins by defining flammability and the main types of test available. Building on this foundation, a group of chapters then reviews tests for key materials used in buildings and their contents. There are chapters on wood, external cladding and sandwich panels as well as the flammability of walls and ceilings. Tests for furniture fabrics, cables and electrical appliances are also reviewed. A final group of chapters discusses other types of test, particularly in the transport sector, including chapters on flammability testing for railway passenger cars, aircraft, road and rail tunnels. With its distinguished international team of contributors, Flammability testing of materials used in construction, transport and mining is a standard reference for civil and transport engineers in particular. An authoritative guide to best practice in ensuring safe design Defines flammability and the main types of test available A vital reference source for civil and transport engineers
