Over the last four decades emissions trading has enjoyed a high profile in environmental law scholarship and in environmental law and policy. Much of the discussion is promotional, preferring emissions trading above other regulatory strategies without, however, engaging with legal complexities embedded in conceptualising, scrutinising and managing emissions trading regimes. The combined effect of these debates is to create a perception that emissions trading is a straightforward regulatory strategy, imposable across various jurisdictions and environmental settings. This book shows that this view is problematic for at least two reasons. First, emissions trading responds to distinct environmental and non-environmental goals, including creating profit-centres, substituting bureaucratic control of resources, and ensuring regulatory compliance. This is important, as the particular purpose entrusted to a given emissions trading regime has, as its corollary, a particular governance structure, according to which the regime may be constructed and managed, and which trusts the emissions market, the state and rights in emissions allowances with distinct roles. Second, the governance structures of emissions trading regimes are culture-specific, which is a significant reminder of the importance of law in understanding not only how emissions trading schemes function but also what meaning is given to them as regulatory strategies. This is shown by deconstructing emissions trading discourses: that is, by inquiring into the assumptions about emissions trading, as featuring in emissions trading scholarship and in debates involving law and policymakers and the judiciary at the EU level. Ultimately, this book makes a strong argument for

reconfiguring the common understanding of emissions trading schemes as regulatory strategies, and sets out a framework for analysis to sustain that reconfiguration.

An approach to comparative economic systems that avoids simple dichotomies to examine a wide variety of institutional and systemic arrangements, with updated country case studies. Comparative economics, with its traditional dichotomies of socialism versus capitalism, private versus state, and planning versus market, is changing. This innovative textbook offers a new approach to understanding different economic systems that reflects both recent transformations in the world economy and recent changes in the field. This new edition examines a wide variety of institutional and systemic arrangements, many of which reflect deep roots in countries' cultures and histories. The book has been updated and revised throughout, with new material in both the historical overview and the country case studies. It offers a broad survey of economic systems, then looks separately at market capitalism, Marxism and socialism, and "new traditional economies" (with an emphasis on the role of religions, Islam in particular, in economic systems). It presents case studies of advanced capitalist nations, including the United States, Japan, Sweden, and Germany; alternative paths in the transition from socialist to market economies taken by such countries as Russia, the former Soviet republics, Poland, China, and the two Koreas; and developing countries, including India, Iran, South Africa, Mexico, and Brazil. The new chapters on Brazil and South Africa complete the book's coverage of all five BRICS nations; the chapter on South Africa extends the book's comparative treatment to another continent. The chapter on Brazil with its account of the role of the Amazon rain forest as a great carbon sink expands the coverage of global environmental and sustainability issues. Each chapter ends

Drawing on new research on textile trade and production in the regions that depended on the Indian Ocean, the book contributes to a new understanding of the role that Indian cloth played in the making of the modern world economy. This book begins with a critical survey of current debates on the "clash of civilizations," goes on to discuss classical and contemporary approaches to civilizational theory, and concludes with an outline of a conceptual framework for comparative analysis.

A landmark comparative history of Europe and China that examines why the Industrial Revolution emerged in the West The Great Divergence sheds light on one of the great questions of history: Why did sustained industrial growth begin in Northwest Europe? Historian Kenneth Pomeranz shows that as recently as 1750, life expectancy, consumption, and product and factor markets were comparable in Europe and East Asia. Moreover, key regions in China and Japan were no worse off ecologically than those in Western Europe, with each region facing corresponding shortages of land-intensive products. Pomeranz's comparative lens reveals the two critical factors resulting in Europe's nineteenth-century divergence—the fortunate location of coal and access to trade with the New World. As East Asia's economy stagnated, Europe narrowly escaped the same fate largely due to favorable resource stocks from underground and overseas. This Princeton Classics edition includes a preface from the author and makes a powerful historical work available to new readers.

What does it mean--and what might it yet come to mean--to write "history" in the twenty-first century? History After Hobsbawm brings together leading historians from across the globe to ask what being an historian should mean in their particular fields of study. Taking their cue from one of the

previous century's greatest historians, Eric Hobsbawm, and his interests across many periods and places, the essays approach their subjects with an underlying sense of what role an historian might seek to play, and attempt to help twenty-first-century society understand "how we got here" They present new work in their sub-fields but also point to how their specialisms are developing, how they might further grow in the future, and how different areas of focus might speak to the larger challenges of history--both for the discipline itself and for its relationship to other fields of academic inquiry. Like Hobsbawm, the authors in this collection know that history matters. They speak to both the past and the present and, in so doing, introduce some of the most exciting new lines of research in a broad array of subjects from the medieval period to the present.

Het is een van de grote wereldvraagstukken: waarom zijn sommige landen rijk en andere arm? Ligt de verklaring in culturele verschillen, het klimaat of geografische omstandigheden? Of is er een andere oorzaak? Waarom is bijvoorbeeld Botswana een van de snelst groeiende economieën ter wereld en blijven andere Afrikaanse landen, zoals Zimbabwe en Congo, ondergedompeld in geweld en armoede? Daron Acemoglu en James Robinson laten overtuigend zien dat het de politieke en economische instituties zijn die het economische succes of falen van een land bepalen; instituties die innovatie en economische groei stimuleren en welvaart en vrede garanderen. De auteurs

illustreren hun betoog met tal van fascinerende voorbeelden. Eén daarvan is Korea, een in wezen homogene staat. In Zuid-Korea legt de overheid verantwoording af aan de burgers en heeft de bevolking volop economische kansen; het land is zeer welvarend. Noord-Korea wordt dictatoriaal geregeerd en kent al tientallen jaren onderdrukking en hongersnood. Op basis van vijftien jaar veldonderzoek en historische research hebben de auteurs een nieuwe, overtuigende politiek-economische theorie geformuleerd. Waarom sommige landen rijk zijn en andere arm laat ons met andere ogen naar de wereld kijken en geeft een dieper inzicht in de oorzaken van armoede en rijkdom. Daron Acemoglu is hoogleraar economie aan het MIT. Hij ontving de John Bates Clark Medal. Degenen die deze onderscheiding krijgen, worden beschouwd als belangrijke kanshebbers voor de Nobelprijs. James Robinson is politiek wetenschapper en econoom. Hij is hoogleraar aan Harvard University en een wereldberoemde Latijns-Amerikaen Afrikadeskundige. 'Acemoglu en Robinson hebben een boeiend en zeer lezenswaardig boek geschreven.' Niall Ferguson 'In Why Nations Fail staan zo veel goede dingen, dat ik onmogelijk alles kan opnoemen.' Charles C. Mann 'Acemoglu en Robinson hebben een belangrijk boek geschreven, dat het verdient te worden gelezen door politici en economen waar ook ter wereld.' Great Divergence, the economic gap between different parts of the world. Thus far, this debate has focused on China, India and north-western Europe, particularly Great Britain. This book shifts the focus to ask how Japan became the only non-western country that managed, at least partially, to modernize its economy and start to industrialize in the 19th century. Using a range of empirical data, Peer Vries analyses the role of the state in Japan's economic growth from the Meiji Restoration to World War II, and asks whether Japan's economic success can be attributed to the rise of state power. Asserting that the state's involvement was fundamental in Japan's economic 'catching up', he demonstrates how this was built on legacies from the previous Tokugawa period. In this book, Vries deepens our understanding of the Great Divergence in global history by re-examining how Japan developed and modernized against the odds.

Why have South-East Asian countries like Malaysia, Indonesia and Vietnam been so successful in reducing levels of absolute poverty, while in African countries like Kenya, Nigeria and Tanzania, despite recent economic growth, most people are still almost as poor as they were half a century ago? This is a creative scholarly argument revisiting the substance, understanding, and implications of the doctrine of creation ex nihilo for contemporary theology and philosophy. Paul J. DeHart examines the special mode of divine transcendence (God's infinity) and investigates areas where accepting an infinite God presents challenging questions to Christian theology. He discusses what "saving knowledge" or "faith" would have to look like when confronted by such an unlimited conception of deity, and ponders how the doctrine of God's trinity can be brought into harmony with radical notions of transcendence, as well as ways the doctrine of creation itself is threatened when the radical otherness of the creator's mind is not maintained. DeHart engages with a diverse range of figures: Jean-Luc Marion, Schleiermacher, Kierkegaard, Kathryn Tanner, John Milbank and Rowan Williams, to illustrate his conviction. This volume deals with deep conceptual issues, indicating that creation ex nihilo remains a lively topic in contemporary

Ascent and Decline of Native and Colonial Trading: Tale of Four Indian Cities presents a vivid picture of how the British political regime reorganized the structure of the Indian economy to suit its own objectives. While doing so, the regime also affected the geographical distribution of economic activities, which in turn altered the locations of poverty and prosperity. To reveal how the British colonial power brought about such changes in the Indian subcontinent, the book narrates the account of two pairs of native and colonial cities—Dacca and Calcutta from the eastern coast, and Surat and Bombay from the western coast. These were major centres of manufacturing, shared a common history and experienced the consequences of three different political dispensations—the Mughal Empire, the East India Company and the British Raj. It describes in detail how mutually beneficial relationships and interregional variations between these cities developed because of colonial restructuring. Due to its extensive coverage and analysis of the underlying phenomena, this book will prove indispensable for developing a deep understanding of Indian colonial and economic history.

Scalpen is leuk! Deel 4: Trading is flow-business

Winsten op de beurs komen meestal niet-synchroon alsof het over een soort kantoorbahn zou gaan, netjes verdeeld over de 20 handelsdagen per maand. De ervaring leert dat de resultaten asymmetrisch optreden. Er zijn dagen waarop het loopt als een klok en dagen waarop de handel alleen maar verlies lijkt te produceren. In dit vierde deel van de reeks "Scalpen is leuk!" gaat de Heikin Ashi Trader dieper in op het juiste moment voor de handel. Succesvolle traders weten vooral wanneer ze niet moeten handelen. Zij richten zich op de momenten wanneer de marktomstandigheden optimaal zijn. Het plezier aan de handel komt dan vanzelf, en daarmee het succes. In deze toestand van "flow" is de nodige discipline ook gemakkelijker. Snel scalpen bevordert het snelle sluiten van verliesposities en ook de snelle realisatie van de opgelopen winst, dat is net zo belangrijk. Inhoud 1. Handel alleen als het leuk is 2. This book collects selected articles addressing several currently debated issues in the field of international macroeconomics. They focus on the role of the central banks in the debate on how to come to terms with the long-term decline in productivity growth, insufficient aggregate demand, high economic uncertainty and growing inequalities following the global financial crisis. Central banks are of considerable importance in this debate since understanding the sluggishness of the recovery process as well as its implications for the natural interest rate are key to assessing

output gaps and the monetary policy stance. The authors argue that a more dynamic domestic and external aggregate demand helps to raise the inflation rate, easing the constraint deriving from the zero lower bound and allowing monetary policy to depart from its current ultra-accommodative position. Beyond macroeconomic factors, the book also discusses a supportive financial environment as a precondition for the rebound of global economic activity, stressing that understanding capital flows is a prerequisite for economic-policy decisions.

This Palgrave Pivot investigates barriers to international agricultural trade caused by a lack of standardized maximum residue levels (MRL) for pesticides. Given the preponderance of pesticide use in food production and the increasing disruptions to trade, a better understanding of the reasons for the decline in international cooperation, the trade impacts, and potential solutions is critical. This volume will contribute to that understanding. Through an analysis of the economics of MRL regulatory harmonization, select case studies, and a look at incentives and disincentives for government agencies and regulators, the authors move the conversation beyond the theoretical, and into current practices and advice for creating workable solutions. This Pivot is a valuable resource for those concerned with food security, trade policy, agricultural production and export supply chains, as well as those interested in broader issues related to science policy and societal trends.

Want to be a successful trader? It's not enough to master generic trading strategies: you must first know yourself. You must understand your own emotional predilections and psychological tendencies. You must learn how to match your

strategies to your own personality. You must choose strategies that are sustainable over the long haul, that you can tolerate—and execute. Michael Martin's *The Inner Voice of Trading* explains why deep self-knowledge is so crucial to successful trading, helps you gain that self-knowledge, and guides you in applying it. Drawing on interviews and discussions with great traders like Michael Marcus and Ed Seykota, he shows how to quiet your mind, develop an "inner voice" you can rely on, and make it your most important trading ally. The last two-three decades have seen a dramatic rise in South–South economic relations, yet no book exists that systematically examines these changes in the global economy. Most studies on South–South relations focus on regionalism, that is regional integration in South America, preferential trading agreements, or China–Africa relations. While studies/books on South–South trade existed in the 1970s and 1980s, the new round of South–South linkages has not been covered. In addition to filling

this gap, this book also includes a historical, theoretical, and empirical examination that attempts to both place current South–South relations within their historical trajectory and examine in what ways current South–South relations differ from previous attempts (‘new-regionalism’), especially that most of the previous discussions took place under the Import Substitution Industrialization or relatively protectionist era. The book contains rigorous empirical analysis of trade and finance to uncover the developmental implications of South–South trade and finance. Finally, the book engages with the burgeoning “new-developmentalism” to discuss how South–South economic integration and the rise of the South as an economic power and as an actor in multinational institutions both benefits and harms the developmental opportunities for poor and middle income South countries.

France; the neoliberal incursions on food supply in Turkey, Greece, and Nicaragua; as well as the consequences of radioactive contamination of farmland in Japan. This edited collection adopts an analytical approach to understanding food insecurity by examining how the historical and political situations in different countries have resulted in an unfolding dialectic of food insecurity and resistance, with the most marginalized people—immigrants, those in refugee camps, poor peasants, and so forth—consistently suffering the worst effects, yet still maintaining agency to fight back. The book tackles food insecurity on a local as well as a global scale and will thus be useful for a broad range of audiences, including students, scholars, and the general public interested in studying food crises, globalization, and current global issues.

Is the 'natural resource curse' destiny? Are different ways to link natural resources and economic development? Using two particular regions as case studies, this edited collection examines the divergent development paths of natural resource rich countries over the past two centuries. Bolivia, Chile and Peru are neighbour states with a common history and are globally known by their mining endowments. Norway

and Sweden have also a strong common history, and different natural resource endowments (forestry, mining and fishing) are essential to understand their current economic success. By comparing natural resource management in the long run in these two divergent regions, this book can help rethink how developing countries can better take advantage of their natural resource endowments. Specifically, the book examines the interaction between natural resources and different key determinants of long-term development: trade, fiscal policy, sustainability, human capital accumulation and business strategies.
