This book constitutes the refereed proceedings of the 6th International Frontiers of Algorithmics Workshop, FAW 2012, and the 8th International Conference on Algorithmic Aspects in Information and Management, AAIM 2012, jointly held in Beijing, China, in May 2012. The 33 revised full papers presented together with 4 invited talks were carefully reviewed and selected from 81 submissions. The papers are organized in topical sections on algorithms and data structures, algorithmic game theory and incentive analysis, biomedical imaging algorithms, communication networks and optimization, computational learning theory, knowledge discovery, and data mining, experimental algorithmic methodologies, optimization algorithms in economic and operations research, pattern recognition algorithms and trustworthy algorithms and trustworthy software.

Assessment in Applied Sport Psychology is a comprehensive resource that will help practitioners gain a deep understanding of assessment in order to build trusting relationships and effective intervention plans that address the needs and goals of their clients.

This book offers broad overview of the field of cognitive engineering and neuroergonomics, covering emerging practices and future trends toward the harmonious integration of human operators and computer systems. It presents novel theoretical findings on mental workload and stress, activity theory, human reliability, error and risk, and a wealth of cutting-edge applications, such as strategies to make assistive technologies more user-oriented. Further, the book describes key advances in our understanding of cognitive processes, including mechanisms of perception, memory, reasoning, and motor response, with a particular focus on their role in interactions between humans and other elements of computer-based systems.

Gathering the proceedings of the AHFE 2020 Virtual Conferences on Neuroergonomics and Cognitive Engineering, and Industrial Cognitive Ergonomics and Engineering Psychology, held on 16–20 July 2020, this book provides extensive and timely information for human–computer interaction researchers, human factors engineers and interaction designers, as well as decision-makers.

Here are 102+ ways to use training in family history and genealogy when applied to real-world careers in education, business, or government, including creative entrepreneurial start-ups. With the future marriage of genealogy to smart cards, online databases, or similar authentication technology for family history, population registration (census), and library research, it may be easier to research family lines, not only by DNA matches through DNA testing for deep ancestry, but also with smart, electronic cards designed for electronic identity. It's also a way to track military records as another way to trace family history. Careers and research may focus on various state libraries or historical associations. History and family studies are part of an interdisciplinary liberal arts program that emphasizes research and writing. Journalism courses help round out your ability to express in plain language the results of your reading, explorations, and interpretations. Obtaining a degree or even taking one course or self-study in Family, Public, or Social History can lead to broad, interdisciplinary careers. Graduate work in library science, law, journalism, public history, or genetics counseling (with a double major in the life sciences and social work) also lead to careers in which an historical education may be used.

This four-volume set of LNCS 12821, LNCS 12822, LNCS 12823 and LNCS 12824, constitutes the refereed proceedings of the 16th International Conference on Document Analysis and Recognition, ICDAR 2021, held in Lausanne, Switzerland in September 2021. The 182 full papers were carefully reviewed and selected from 340 submissions, and are presented with 13 competition reports. The papers are organized into the following topical sections: document analysis for literature search, document summarization and translation, multimedia document analysis, mobile text recognition, document analysis for social good, indexing and retrieval of documents, physical and logical layout analysis, recognition of tables and formulas, and natural language processing (NLP) for document understanding.

This book is all about Smart Parenting in the world of Technology. Today, we must know how children behave and how they should be managed. An unprecedented political, economic, social, and legal storm was unleashed by the United Kingdom's June 2016 referendum to leave the European Union and the government's response to the vote. After decades of strengthening European integration and independence, Brexit necessitates a deep understanding of its international law implications on both sides of the English Channel in order to chart the stormy seas of negotiating and advancing beyond separation. In Complexity's Embrace, international law practitioners and academics from the United Kingdom, Europe, Canada and the United States look

beyond the rhetoric of “Brexit Means Brexit” and “no agreement is better than a bad agreement” to explain the challenges that need to be addressed in the diverse fields of trade, financial services, insolvency, intellectual property, environment, and human rights. The authors in this volume articulate, with unvarnished clarity, the international law implications of Brexit, providing policy makers, commentators, the legal community, and civil society with critical information they need to participate in negotiating their future within or outside Europe. Complexity’s Embrace explores the many unprecedented questions about the UK’s future trading arrangements.

CICLing 2003 (www.CICLing.org) was the 4th annual Conference on Intelligent Text Processing and Computational Linguistics. It was intended to provide a balanced view of the cutting-edge developments in both the theoretical foundations of computational linguistics and the practice of natural language text processing with its numerous applications. A feature of CICLing conferences is their wide scope that covers nearly all areas of computational linguistics and all aspects of natural language processing applications. The conference is a forum for dialogue between the specialists working in these two areas. This year we were honored by the presence of our keynote speakers Eric Brill (Microsoft Research, USA), Aravind Joshi (U. Pennsylvania, USA), Adam Kilgarriff (Brighton U., UK), and Ted Pedersen (U. Minnesota, USA), who delivered excellent extended lectures and organized vivid discussions. Of 92 submissions received, after careful reviewing 67 were selected for presentation; 43 as full papers and 24 as short papers, by 150 authors from 23 countries: Spain (23 authors), China (20), USA (16), Mexico (13), Japan (12), UK (11), Czech Republic (8), Korea and Sweden (7 each), Canada and Ireland (5 each), Hungary (4), Brazil (3), Belgium, Germany, Italy, Romania, Russia and Tunisia (2 each), Cuba, Denmark, Finland and France (1 each).

Numerous studies indicate that learning is most effective in terms of persistency when it addresses the whole person rather than merely the intellect. A set of promotive activities that foster significant learning have been extensively researched in classroom settings. The major scientific goal of this work is to investigate whether and how promotive activities may be applied in technology-enhanced learning settings. Besides transferring existing activity patterns to the online context, this work presents new opportunities that could only emerge with technology enhancement. This work draws up general recommendations and provides practical examples. The main fields of interest are: motivational aspects, peer review, and «active listening» with written means of online communication.

Swaiman’s Pediatric Neurology, by Drs. Kenneth Swaiman, Stephen Ashwal, Donna Ferriero, and Nina Schor, is a trusted resource in clinical pediatric neurology with comprehensive, authoritative, and clearly-written guidance. Extensively updated to reflect advancements in the field, this fifth edition covers new imaging modalities such as pediatric neuroimaging, spinal fluid examination, neurophysiology, as well as the treatment and management of epilepsy, ADHD, infections of the nervous system, and more. The fully searchable text is now available online at www.expertconsult.com, along with downloadable images and procedural videos demonstrating intraventricular hemorrhage and white matter injury, making this an indispensable multimedia resource in pediatric neurology. Gain a clear visual understanding from the numerous illustrations, informative line drawings, and summary tables. Tap into the expertise of an authoritative and respected team of editors and contributors. Get comprehensive coverage of all aspects of pediatric neurology with a clinical focus useful for both the experienced clinician and the physician-in-training. Access the fully searchable text online at www.expertconsult.com, along with 16 additional online-only chapters, downloadable images, videos demonstrating intraventricular hemorrhage and white matter injury, and links to PubMed. Stay current on recent developments through extensive revisions: a new chapter on paraneoplastic syndromes in children; a new section on congenital brain malformations written by leading international authorities; and another one on cutting-edge pediatric neuroscience concepts relating to plasticity, neurodegeneration of the developing brain, and neuroinflammation. Apply the latest information on diagnostic modalities, including pediatric neuroimaging, spinal fluid examination, and neurophysiology

Here are the refereed proceedings of the 6th Italian Conference on Algorithms and Computation, CIAC 2006. The 33 revised full papers presented together with 3 invited papers address such topics as sequential, parallel and distributed algorithms, data structures, approximation algorithms, randomized algorithms, on-line algorithms, graph algorithms, analysis of algorithms, algorithm engineering, algorithmic game theory, computational biology, computational complexity, communication networks, computational geometry, cryptography, discrete optimization, graph drawing, mathematical programming, and quantum algorithms.

Provides a carefully devised guide to the practice of photography within a digital workflow to improve any photographer's digital images.

"De-westernising journalism studies in an intelligent way, this book deserves to be read around the world."---Professor James Curran, Goldsmiths, University of London, United Kingdom --

There are dozens of emerging interactive web applications and services (often referred to as the participatory web, or Web 2.0). This title addresses such questions as how can Web 2.0 applications be integrated with participatory development approaches and how can they facilitate and contribute to people's participation and decision-making.

This book further develops both the traditional and the behavioural approach to competition law, and applies these approaches to a variety of timely issues. It discusses several fundamental questions regarding competition law and economics, and explores the applications of competition law and economics. In turn, the book analyses the interplay of intellectual property rights and patents in various aspects of competition law, and investigates the impacts that developments in information technology, such as big data analytics, have on competition law. The book also discusses the impact of energy law reforms on energy markets from a competition law perspective. Competition law is a classic field of economic analysis. This is largely due to the fact that competition law uses terms such as market, price, and competition and must therefore rely on economic know-how and analyses. In the United States, economic analysis has greatly influenced not just the scholarship on antitrust law, but also judicial decisions and agency enforcement. Antitrust law and economics are based on the traditional paradigm of neoclassical economics, which relies on the assumption that the market players, i.e. consumers and producers, are rational. This approach to competition law was later received in Europe under the banner of a “more economic approach”. For the past two decades, behavioural law and economics, which seeks to generate better insights into legal phenomena by providing more realistic psychological foundations for economic models, and to offer a multitude of applications in legislation and legal adjudication, has challenged the traditional economic approach to law in general and, more recently, to competition law specifically.
