Are we limited by our memory or... do we limit our memory? "Unlimited Memory" is a huge claim... and please continue reading... Imagine how much faster you would learn IF ONLY you have unlimited memory. Imagine how much more productive we would be... Guess what? The truth is that you DO have unlimited memory. The human brain consists of about one billion neurons. Each neuron forms about 1,000 connections to other neurons, amounting to more than a trillion connections. If each neuron could only help store a single memory, running out of space would be a problem. You might have only a few gigabytes of storage space, similar to the space in an iPod or a USB flash drive. Yet neurons combine so that each one helps with many memories at a time, exponentially increasing the brain's memory storage capacity to something closer to around 2.5 petabytes (or a million gigabytes). For comparison, if your brain worked like a digital video recorder in a television, 2.5 petabytes would be enough to hold three million hours of TV shows. You would have to leave the TV running continuously for more than 300 years to use up all that storage. Can you begin to see why your memory is indeed... unlimited? The Science of Unlimited Memory dives deep into the potential of our human brain and unleashing it to its fullest potential. Learn more, learn faster, memorize more, remember more and accelerate your productivity. "The existence of forgetting has never been proved: We only know that some things don't come to mind when we want them." - Friedrich Nietzsche There is no good or bad memory. There is only a trained memory and an untrained memory. The good news is that you can begin training your memory today. The better news is that your brain have incredibly unlimited potential. The best news is that however good your memory will be tomorrow depends on your choice today. Unlike other memory improvement books, The Science of Unlimited Memory is an actionable and scientifically backed guide to aid you on your journey to unleashing your brain's fullest potential.
